teamplay Fleet: Discover Your Scanner's Potential

Andrea Hartung, Philipp Walther

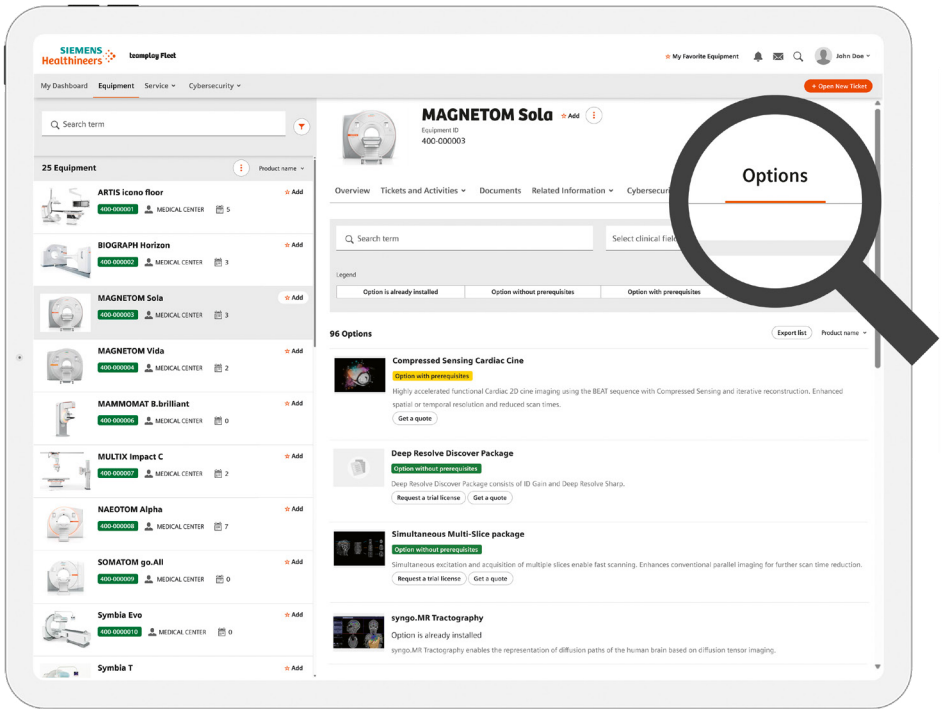

Siemens Healthineers, Erlangen, Germany

The field of magnetic resonance imaging (MRI) is constantly evolving. News about innovations and novel applications is regularly shared at conferences or in the MRI literature. When owners and operators of MRI systems hear of a promising new application or read about the latest AI-powered imaging solution, they are likely to wonder if it is already available on their scanner. If not, their next question is usually: Could we install it?

As clinical demands grow and change, departments might find themselves asking these types of question more often. Perhaps they are seeing more cardiac patients, looking to enhance image quality, improve workflow efficiency, or explore the latest AI applications. But before they can make any decisions about next steps, they need to understand the capabilities of their installed systems.

However, information about a system's installed capabilities and the available options is not always easy to find, and the details might reside in different places. Yet accessing this data is essential for anyone planning the future development of their department.

The teamplay Fleet portal from Siemens Healthineers addresses this need. It allows users to access information about the current status of their imaging and therapy systems and discover future possibilities for the fleet.

1 teamplay Fleet shows the installed capabilities and available clinical applications and options for imaging and therapy systems. Users can review offerings tailored to their specific system, check prerequisites, and request quotes or trial licenses.

Discover what's possible

With teamplay Fleet, users can quickly view the capabilities of their systems. The app displays the installed functionalities, available clinical applications and options, and any prerequisites. This allows users to check, in just a few clicks, whether a new application is within reach. In many cases, the app also allows users to request a quote or a trial license.

2 teamplay Fleet is the fleet management portal for installed systems from Siemens Healthineers.
