1. INTRODUCTION

1.1 PURPOSE OF THIS DOCUMENT

This conformance statement describes the DICOM Interface of the *syngo*® Dynamics implementation of a Medical Imaging Storage and Archive System (*syngo*® Dynamics DICOM Server) running Software Version 6.0. From this point forward, syngo® Dynamics DICOM Server will be referred to as *syngo Dynamics Server*.

The *syngo Dynamics Server* DICOM Interface acts as a service class provider (SCP) for Storage, Storage Commitment, MPPS, Verification and Query/Retrieve Service Classes.

The *syngo Dynamics Server* DICOM Interface acts as a service class user (SCU) for Storage, Storage Commitment, Verification, Query/Retrieve, MPPS, Patient Management, Study Management, Results Management and Basic Worklist Management Service Classes.

This DICOM Conformance Statement is written according to part PS 3.2 of the DICOM 3.0 standard.

1.4 CONNECTIVITY AND INTEROPERABILITY

The implementation of the *syngo Dynamics Server* DICOM interface has been tested to assure correspondence with this Conformance Statement. But the Conformance Statement and the DICOM standard does not guarantee interoperability.

The user must compare the relevant Conformance Statements and if a successful interconnection should be possible, the user is responsible to specify an appropriate test suite and to validate the interoperability, which is required.

A network environment may need additional functions out of the scope of DICOM.

2. IMPLEMENTATION MODEL

syngo Dynamics Server is an image database and storage facility. *syngo Dynamics Server* is a single application entity that stores images sent to it by service class users, takes responsibility for storage of the objects, allows queries based on several standard query models, and retrieves requested images. The *syngo Dynamics Server* is able to validate images before they are stored internally by querying a service class provider for demographic information. Studies found to be registered with the HIS/RIS are stored, while studies not found to be registered are automatically corrected, where possible, or set aside for a technician to correct. Study status messages can be sent to service class providers and received from service class users to reflect changes in the state of the study.

2.1 APPLICATION DATA FLOW DIAGRAM

Figure 2.1-1 depicts the DICOM data flow to and from *syngo Dynamics Server*. This section discusses the application's data flow represented in this diagram.

In the remote real-world activity labeled "Verify Communication", a remote application entity (AE) initiates an association and requests verification from syngo Dynamics Server. Assuming *syngo Dynamics Server* receives the request, it responds to the remote AE and communication between the two AE's has been verified. *syngo Dynamics Server* can also initiate an association and request verification to a remote AE.

In the remote real-world activity "Store Objects", a remote AE initiates an association with syngo Dynamics Server and sends one or more objects to *syngo Dynamics Server*. When syngo Dynamics Server receives an object, it stores that object in Part 10 format on some media and registers that object in the database. *syngo Dynamics Server* can also initiate an association and send one or more objects to a remote AE.

In the remote real-world activity "Request Storage Commitment", a remote AE initiates an association with *syngo Dynamics Server* and requests commitment for the safekeeping of one or more composite SOP instances on syngo Dynamics Server. *syngo Dynamics Server* will open a new association with the remote AE to indicate success or failure. *syngo Dynamics Server* can also initiate an association and request commitment for the safekeeping of one or more composite SOP instances to a remote AE.

In the remote real-world activity "Find Objects", a remote AE initiates an association with syngo Dynamics Server and sends a query. *syngo Dynamics Server* will search the database for possible matches with composite SOP instances. The results of the query are returned to the remote AE using the same association. *syngo Dynamics Server* can also initiate an association and send a query to a remote AE.

In the remote real-world activity "Move Objects", a remote AE initiates an association with syngo Dynamics Server and requests some composite SOP instances be retrieved. *syngo Dynamics Server* will search the database for possible matches with composite SOP instances. The resulting composite SOP instances are transferred to either the same AE that requested the retrieval or to another AE over a new association. *syngo Dynamics Server* can also initiate an association and request some composite SOP instances be retrieved from a remote AE.

In the remote real-world activity "Get Worklist", syngo Dynamics Server initiates an association with a remote AE and sends a query for information about a patient or study. *syngo Dynamics Server* will update Composite SOP instances with information obtained from the query.

In the remote real-world activity "Unsolicited Notifications", a remote AE initiates an association with *syngo Dynamics Server* and sends an unsolicited notification event containing changes in the state of a patient, study, visit, or interpretation. If the particular notification event is recognized, then syngo Dynamics Server updates its database or performs events based on configuration settings.

In the remote real-world activity "Study Update", a remote AE initiates an association with *syngo Dynamics Server* and sends an MPPS message indicating the status of a study being performed. *syngo Dynamics Server* will reflect the status changes accordingly. *syngo Dynamics Server* can also initiate an association with a remote AE and provide status information.
Figure 2.1-1 *syngo Dynamics Server* Implementation Model

2.2 FUNCTIONAL DEFINITION OF APPLICATION ENTITIES

syngo Dynamics Server operates as a single AE whose title is configurable. Its functions are described in section 2.1.

2.3 SEQUENCING OF REAL WORLD ACTIVITIES

- *syngo Dynamics Server* must store objects to a remote AE before a storage commitment request for those objects is sent.

- *syngo Dynamics Server* must receive objects from a remote AE before a study update is sent outbound.

- If configured to archive objects to PACS, syngo Dynamics Server may request objects be moved from a remote AE to local media to service an object move request from another remote AE.

3. APPLICATION ENTITY SPECIFICATIONS

syngo Dynamics Server operates as a single application entity.

Table 3.1-3 Proposed Presentation Contexts – Store Objects

3.1.2.2.3 SOP Specific Conformance – Store Objects

syngo Dynamics Server provides Standard conformance to the DICOM Storage Service Class as an SCU.

Depending on the *syngo Dynamics Server* Storage Commitment configuration, a successful C-Store response status may generate a corresponding Storage Commitment request per object stored or not generate any actions until all objects of the study have been stored.

An unsuccessful C-Store response will generate a warning dialog and the operation will remain in the Job Queue. The number of automated retry attempts and the time interval between each is configurable for each remote AE. The user is notified of storage failures. Studies are not removed from the system until successfully archived.

A warning status received in response to a C-Store operation will be treated in the same manner as an unsuccessful C-Store response.

3.1.2.3 Real-World Activity – Request Storage Commitment

3.1.2.3.1 Associated Real-World Activity – Request Storage Commitment

syngo Dynamics Server can send images to another SCP for permanent storage and request safe keeping of a set of SOP instances. *syngo Dynamics Server* expects a notification response from the SCP.

3.1.2.3.2 Proposed Presentation Contexts – Request Storage Commitment

syngo Dynamics Server will propose the Presentation Contexts shown in Table 3.1-4.

Table 3.1-5 Storage Commitment Request - Action Information

3.1.2.3.3.1 Operations

syngo Dynamics Server will generate an N-ACTION primitive if the local configuration setting for the remote AE is enabled for storage commitment. *syngo Dynamics Server* only supports the Storage AE as the destination for the storage commitment N-Action.

- *syngo Dynamics Server* may request storage commitment for all the SOP Class UIDs listed in Table 3.1-3.

- *syngo Dynamics Server* supports the Referenced Study Component Sequence Attribute.

- *syngo Dynamics Server* will keep the Transaction ID applicable indefinitely.

- *syngo Dynamics Server* does not support the optional Storage Media File-Set ID and UID Attributes in the N-Action

- *syngo Dynamics Server* can send a Storage Commitment request on a per object or per study basis.

3.1.2.3.3.1 Notifications
- *syngo Dynamics Server* does not perform any notification based actions when a success status is received.

- *syngo Dynamics Server* will generate a warning dialog and the operation will remain in the Job Queue when a failure status is received. The number of automated retry attempts and the time interval between each is configurable for each remote AE.

3.1.2.3.3.1 Implementation Specific Details
- If Storage Commitment is enabled for the Archive Storage AE:
  - ♦ *syngo* Dynamics Server will consider locally cached study data as available for deletion to free space if a successful Storage Commitment response was returned from that Storage AE for the objects in the commitment request and other deletion criteria are met. Only objects successfully committed are available for local deletion if space is needed.

- If Storage Commitment is not enabled for the Archive Storage AE
  ♦ *syngo Dynamics Server* does not perform any actions when a success status is received.

- *syngo Dynamics Server* can be configured to send a Storage Commitment request on a per object or per study basis.

3.1.2.4 Real-World Activity – Find Object

3.1.2.4.1 Associated Real-World Activity – Find Object
syngo Dynamics Server can query a remote AE for composite objects to the Series Level. An association is established when the user initiates a query from the graphical user interface. *syngo Dynamics Server* will establish an association automatically to query a remote AE to obtain a list of relevant objects based on pre-fetch configuration rules.

3.1.2.4.2 Proposed Presentation Contexts – Find Object
syngo Dynamics Server will propose the Presentation Contexts shown in Table 3.1-6.

3.1.2.5 Real-World Activity – Move Object

3.1.2.5.1 Associated Real-World Activity – Move Object

syngo Dynamics Server can retrieve composite objects from a remote AE. An association is established when the user initiates a query from the graphical user interface. *syngo Dynamics Server* will establish an association automatically to retrieve objects that were archived to the remote AE or to pre-fetch relevant objects from the remote AE based on pre-fetch configuration rules.

3.1.2.5.2 Proposed Presentation Contexts – Move Object

3.1.2.7.3 SOP Specific Conformance – Study Update
syngo Dynamics Server provides standard conformance to the DICOM Study Content Notification and partial conformance to the Study Component Management Service Classes as an SCU. The Study Component Management is not conformant to PS3.4, however it is included in this document since some remote AEs do provide support for the *syngo*® Dynamics implementation.

syngo Dynamics Server will attempt to use Study Component Management over Basic Study Content Notification if both SOP classes are supported by the remote AE.

MPPS notifications are configurable in the user interface.

3.1.2.7.3.1 Study Component Management - Operations

3.1.2.7.3.3 Modality Performed Procedure Step

syngo Dynamics Server can create a Modality Performed Procedure Step instance on a remote AE using the DIMSE N-CREATE Service to identify the change in study status. This provides support to modalities without native MPPS support.

syngo® Dynamics will create a Modality Performed Procedure Step SOP Instance for a specified source if configured through the graphical user interface. Since *syngo Dynamics Server* only creates the SOP Instance when a study has been sent for storage, the status of DISCONTINUED is never used.

syngo® Dynamics will provide the N-CREATE Attributes Values shown in Table 3.1-16. These values are obtained from information contained within the image object.

syngo® Dynamics will provide the N-SET Attributes Values shown in Table 3.1-17.

3.1.3.2.3 SOP Specific Conformance – Store Objects

syngo Dynamics Server provides conformance to the DICOM Storage Service Class as a Level 2 (Full) SCP.

No optional elements are discarded. All Type 1, Type 2 and Type 3 attributes will be retained. Private attributes will be stored and included when the object is sent out again. *syngo Dynamics Server* can decompress lossy compressed images and send them in uncompressed format. The Attribute Lossy Image Compression (0028,2110) remains "01".

Upon successful storage of objects contained within a study the study can be automatically transferred to a remote AE or returned in response to a retrieval request. *syngo Dynamics Server* can be configured to automatically archive or delete objects contained within a study. Studies may be manually transferred, archived or deleted through the graphical user interface. Note that when an object gets transferred out of *syngo*® Dynamics by any of the above mentioned methods, the Institutional Name (0008,0080) and the Institutional Department Name (0008,1040) are set to reflect the Institutional Name and Department on *syngo*® Dynamics.

When an object is received that has a SOP Instance UID (0008,0018), Study Instance UID (0020,000D) and Series Instance UID (0020,000E) of an object that is already present on *syngo Dynamics Server* the existing object will be overwritten. When an object is received that has the same SOP Instance UID but different Study Instance UID and Series Instance UID of an object that is already present on *syngo Dynamics Server*, the new object will be assigned a new SOP Instance UID by *syngo Dynamics Server*.

syngo Dynamics Server can be configured to lock an existing study after it has been marked as READ. *syngo Dynamics Server* will not accept new objects and return an Error status. The user will be notified.

syngo Dynamics Server will return the C-STORE status codes shown in Table 3.1-21.

Service Status	Further Meaning	Status Codes	Description
Refused	Out of resources	A700	Indicates that there was not enough storage space to store the image. Recovery from this condition is left to the administrative functions.

	SOP Class not supported	A800	Indicates that the SOP Class of the Image in the C-STORE operation did not match the Abstract Syntax negotiated for the Presentation Context.
Error	Data set does not match SOP Class	A900	Indicates that the Data Set does not encode an instance of the SOP Class specified.
	Failed	C000	The operation was not successful.
	Unable to register object, study locked; no new objects allowed	C005	Indicates that no new objects can be added to this study because it has been locked.

Warning	Data set does not match SOP Class	B007	Indicates that the Data Set does not match the SOP Class, but that the image was stored anyway.
	Duplicate SOP Instance UID	D000	Indicates that the SOP Instance UID of the specified image is already stored in the database.
Success	Success	0000	Operation performed properly.

3.1.3.2.4 Presentation Context Acceptance Criterion – Store Objects
syngo Dynamics Server will accept any number of Storage Presentation Contexts shown in Table 3.1-19 per association request. Any one Abstract Syntax may be specified more than once in an association request if the transfer syntaxes differ between Presentation Contexts.

3.1.3.2.5 Transfer Syntax Selection Policies
syngo Dynamics Server will prefer a compressed Transfer Syntax over an uncompressed Transfer Syntax. Lossless Compression is preferred over Lossy Compression and Explicit VR Little Endian is preferred over Implicit VR Little Endian.

3.1.3.3 Real-World Activity – Request Storage Commitment

3.1.3.3.1 Associated Real-World Activity – Request Storage Commitment
syngo Dynamics Server stores objects sent by a remote AE. The remote AE can transmit a Storage Commitment Request with a list of references to one or more SOP Instances. *syngo Dynamics Server* will return a Storage Commitment Result to the remote AE.

3.1.3.3.2 Accepted Presentation Contexts – Request Storage Commitment
syngo Dynamics Server will accept the Presentation Contexts shown in Table 3.1-23.

Presentation Context Table			
Abstract Syntax	Transfer Syntax	Role	Extended

Table 3.1-23 Accepted Presentation Contexts - Request Storage Commitment

3.1.3.3.3 SOP Specific Conformance – Request Storage Commitment

syngo Dynamics Server provides partial conformance to the DICOM Storage Commitment Service Class as an SCP.

3.1.3.3.3.1 Request Storage Commitment – Operations

syngo Dynamics Server will store SOP Instances indefinitely unless the instances are manually deleted by a user with appropriate system permissions. The capacity is limited only by the availability of archive storage and volatility is dependent on the archive medium used. *syngo Dynamics Server* will stop accepting new objects for storage to ensure the availability of objects for which a successful storage commitment response has been sent.

syngo Dynamics Server can be configured not to archive objects received from a remote AE. A successful storage commitment request will be returned to the remote AE, however the persistence of storage will be dependent on the amount of storage capacity available on *syngo Dynamics Server* and disk management configuration settings of the system.

syngo Dynamics Server does not support the optional Storage Media and File-Set ID and UID Attributes in the N-ACTION. *syngo Dynamics Server* supports the Action Type and Action Information shown in Table 3.1-24.

Action Type Name	Action Type ID	Attribute	Tag

Table 3.1-24 Storage Commitment Request – Action Information

3.1.3.3.3.2 Request Storage Commitment – Notifications

syngo Dynamics Server will process the Storage Commitment Request determine if the SOP Instances have been successfully committed to storage. *syngo Dynamics Server* will generate a Storage Commitment Result that will always be sent on a separate association and includes references to the successfully and unsuccessfully stored SOP Instances.

syngo Dynamics Server does not support the optional Storage Media and File-Set ID and UID or Retrieve AE Title (0008,0054) Attributes in the N-EVENT-REPORT. *syngo Dynamics Server* supports the Event Type and Event Information shown in Table 3.1-25.

Table 3.1-25 Storage Commitment Result – Event Information

3.1.3.3.4 Presentation Context Acceptance Criterion – Request Storage Commitment
syngo Dynamics Server will only accept the Presentation Context listed in Table 3.1-23.

3.1.3.3.5 Transfer Syntax Selection Policies – Request Storage Commitment
syngo Dynamics Server only supports Implicit VR Little Endian for this Real World Activity.

3.1.3.4 Real-World Activity – Find Object

3.1.3.4.1 Associated Real World Activity – Find Object
syngo Dynamics Server will respond to a query request by a remote AE. *syngo Dynamics Server* supports queries for composite objects at the Instance Level.

syngo Dynamics Server supports the query/retrieve services indicated in Table 3.1-26. The latency for retrieval of SOP Instances is dependent on the object state:

- ONLINE - Objects can be immediately retrieved from *syngo Dynamics Server*.
- NEARLINE – Objects can be retrieved from *syngo Dynamics Server*, however additional processing time is required.
- OFFLINE – Objects cannot be retrieved without human user intervention.
- PACS – Objects can be retrieved from the *syngo Dynamics Server* however additional processing time is required for the data to be retrieved from the PACS.

syngo Dynamics Server can be configured to return results for objects with an ONLINE state only or all objects maintained in the *syngo*® Dynamics Database regardless of state.

3.1.3.4.2 Accepted Presentation Contexts – Find Object
syngo Dynamics Server will accept the Presentation Contexts shown in Table 3.1-26.

Table 3.1-35 Study Notification Event Types

When *syngo Dynamics Server* receives a Study Notification Event, it will use the Affected SOP Instance UID in the Command Set of the Event as the Study Instance UID in a Modality Worklist query. The Study Instance UID will be the only matching Attribute in the query. The Modality Worklist query is described in Section 3.1.2.6.3.
