DICOM Conformance Statement

Rev. 5.0 2012-10-15

SIEMENS Healthcare,
Henkestr. 127, D-91052 Erlangen, Germany

Headquarters: Berlin and Munich
Siemens AG, Wittelsbacher Platz 2, D-80333 Munich, Germany

1 CONFORMANCE STATEMENT OVERVIEW

The ***syngo.via*** is comprised of a storage system (***syngo.via* Application Server**), client review workstations (***syngo.via* Client**) and connectivity to DICOM modalities and healthcare information systems. By default one ***syngo.via*** (**AE**) is used. It is possible to configure usage of multiple different AEs for the individual DICOM services.

The ***syngo.via***:

- stores objects (images, reports, encapsulated PDF) sent to it by service class users
- takes responsibility for storage of the objects
- allows object queries based on several query models
- retrieves and transmits requested objects
- displays images to a user
- send/transmit images to a printer
- imports and exports objects from portable interchange media
- uses patient and procedure information from modality worklist requests

The ***syngo.via*** conforms to the DICOM 3.0 2011 Standard and supports the network services as described in Table 1-1 and the media services as described in Table 1-2.

The ***syngo.via*** **Application Server** creates ISO files to be burnt by ***syngo.via*** **Client** local burning SW (if hardware and software are available). Therefore it is only possible to update DICOMDIRs before the burning process has been started. When selecting the 'Standard' profile from the export UI, the export job will be handled according to the STD-GEN-XXX profile; depending on which media has been selected. In case the 'Patient' profile is selected, the STD-GEN-XXX-J2K profile will be used, depending on which media or destination has been selected.

3.1 REVISION HISTORY

Version/ Status	Date of Issue	Author	Change & Reason of Change
1.0	2012-06-29	I DT EVO HU O	First release version for syngo.via VA20A based on version 3.0 of syngo.via VA11B. **Changes in VA20A:** - Corrections in chapter 4.2.1.3.1.4 - Corrections in chapter 8.2.1 - Corrections in chapter 4.2.1.2 and chapter 4.4.2 (default PDU size, max. number of parallel receiving associations) - Correction in chapter 4.2.1.3.1.1 (default retry interval) - Updates in chapter 5.2.1.3 and chapter 8.1 (SOP classes) - Updates in chapter 8.1 (SOP classes and visualization column)
2.0	2012-09-06	I DT EVO HU O	- Corrections in table 5-2 (FSU is added) - SOP Class “Surface segmentation” is supported - Added chapter 8.7
3.0	2012-09-18	I DT EVO HU O	- Renamed chapter 4.2.1.3.1.4 to “Encapsulation of SOP classes generated by syngo.via”
4.0	2012-10-11	I DT EVO HU O	- Corrections in table 8-1 (Grayscale softcopy presentation state, Grayscale Print Management META SOP classes, Color Print Management META SOP classes) - Corrections in table 4-18 (Patient ID) - Correction in chapter 3.6 (References)
5.0	2012-10-15	I DT EVO HU O	- Added chapter 5.5 (Attribute Confidentiality Profiles)

3.2 GENERAL

The Conformance Statement describes the DICOM interface for the Siemens ***syngo.via*** in terms of part 2 of [1].

3.3 AUDIENCE

This document is intended for hospital staff, health system integrators, software designers or implementers. It is assumed that the reader has a working understanding of DICOM.

3.4 REMARKS

DICOM, by itself, does not guarantee interoperability. However, the Conformance Statement facilitates a first-level validation for interoperability between different applications supporting the same DICOM functionality as SCU and SCP, respectively.

This Conformance Statement is not intended to replace validation with other DICOM equipment to ensure proper exchange of information intended.

The scope of this Conformance Statement is to facilitate communication with Siemens and other vendors' medical equipment. The Conformance Statement should be read and understood in conjunction with the DICOM 3.0 Standard [1]. However, by itself it is not guaranteed to ensure the desired interoperability and a successful interconnectivity.

The user should be aware of the following important issues:

- The comparison of different conformance statements is the first step towards assessing interconnectivity.
- Test procedures should be defined and tests should be performed by the user to validate the connectivity desired. DICOM itself and the conformance parts do not specify this.
- The standard will evolve to meet the users' future requirements. Siemens is actively involved in developing the standard further and therefore reserves the right to make changes to its products or to discontinue its delivery.

Siemens reserves the right to modify the design and specifications contained herein without prior notice. Please contact your local Siemens representative for the most recent product information.

3.7 SCOPE AND FIELD OF APPLICATION

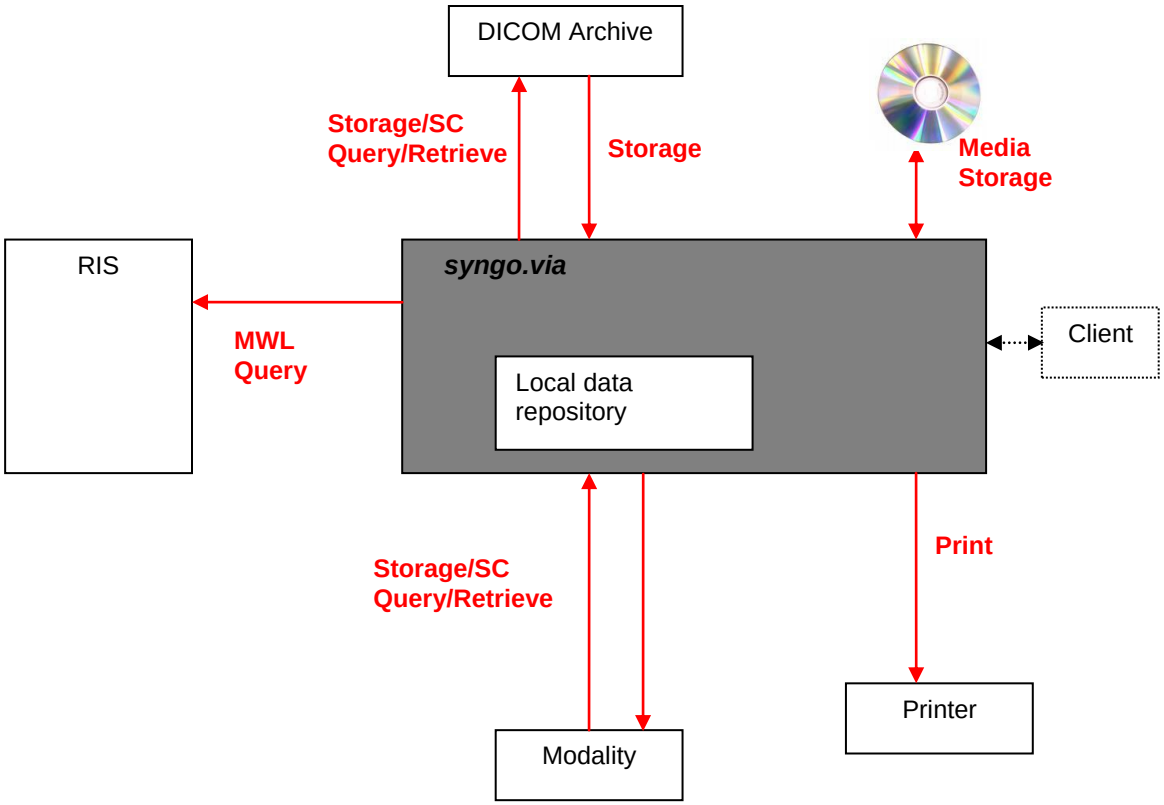

Figure 3.7-1: Overview about DICOM capabilities of *syngo.via* VA20A

4 NETWORKING

4.1 IMPLEMENTATION MODEL

4.1.1 Application Data Flow

The Application Data Flow diagram in Figure 4.1-1 depicts the DICOM data flow to and from the individual applications within ***syngo.via***.

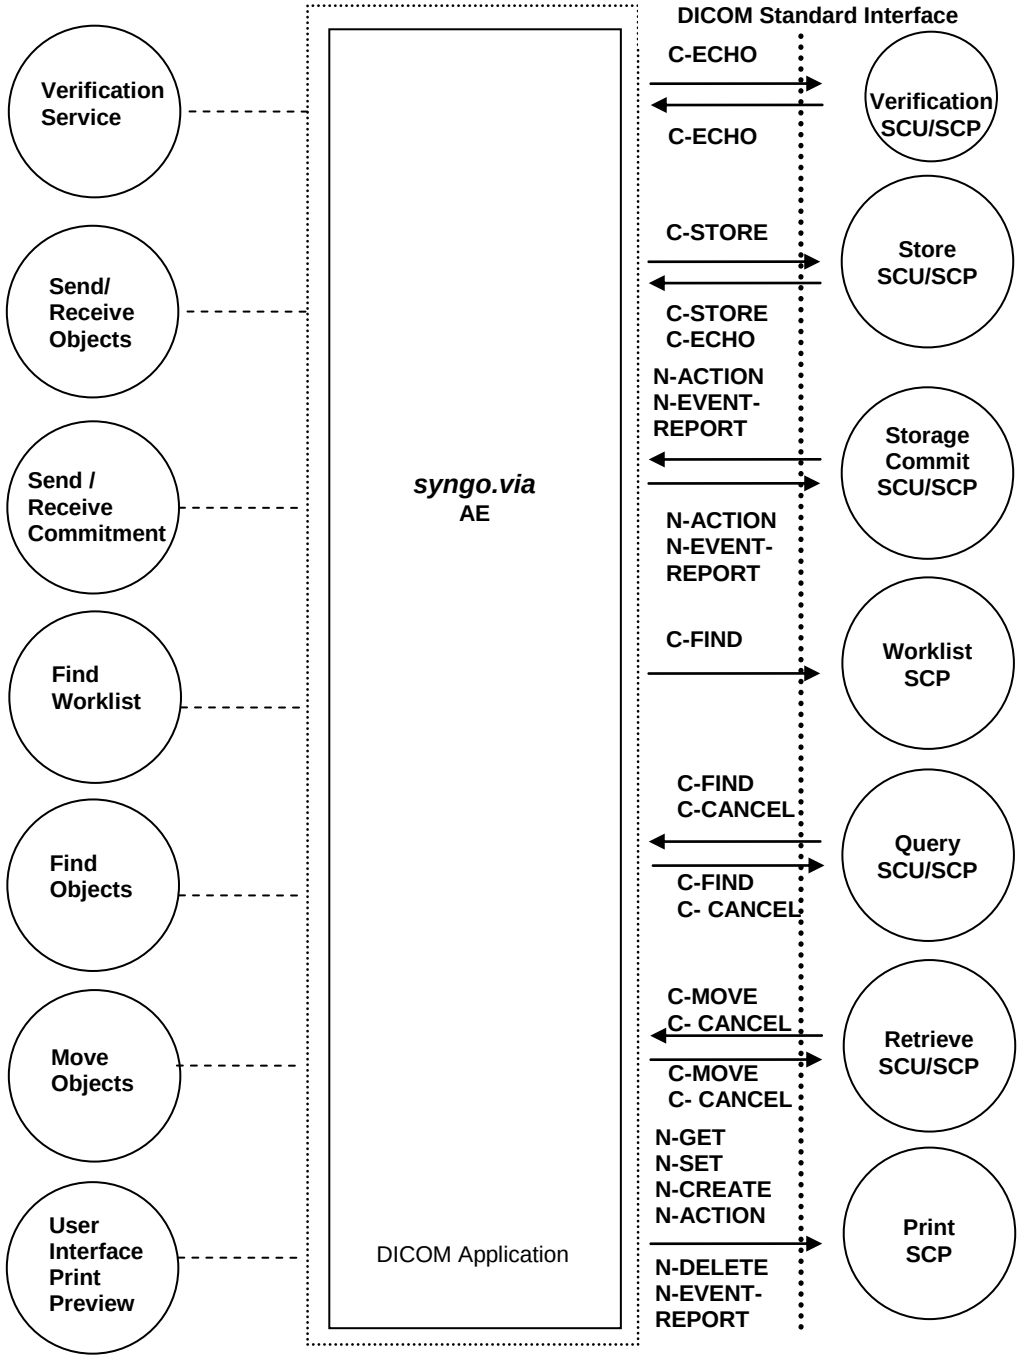

Figure 4.1-1: Application Data Flow Diagram

4.1.2 Functional Definition of AE's

The SCP components of the Application Entities of the ***syngo.via*** operate as background server processes. They exist as soon as the system is powered up and wait for association requests. Upon accepting an association with a negotiated Presentation Context they start to receive and process the requests described in the following sections.

The SCU components of the Application Entity are invoked upon requests from the user interface or indirect by trigger from internal processes.

4.1.2.1 Verification

Verification requests will be processed and responded by the ***syngo.via*** AE. The ***syngo.via*** AE can also initiate an association and request verification to a remote AE.

Verification as SCU is available for each service through the Networking/Printing pages of service configuration:

- Storage configuration
- Storage Commitment configuration
- Query/Retrieve configuration
- Worklist configuration
- Print configuration

4.1.2.2 Storage

The ***syngo.via*** Storage SCU is invoked either directly by the user, by an auto-archive trigger or internally by the Query/Retrieve Application Entity that is responsible for processing retrieve requests. The request consists of data describing the composite objects selected for storage and the destination AET. An association is negotiated with the destination AE and the image data is transferred using the DIMSE C-STORE -Service. The transfer status is reported to the initiator of the Storage request.

The ***syngo.via*** Storage SCP starts to receive the Composite Image Objects and import them into the database after accepting an association with a negotiated Presentation Context. The system can be configured in such a way, that Responses to the Storage Request are sent immediately after reception of the Data, or after persistent storage on the hard disc or after storage & indexing in the DB.

4.1.2.3 Storage Commitment

The ***syngo.via*** serves as a SCU for the DICOM Storage Commitment service. Upon successful completion of a storage job, the system uses the DIMSE N-ACTION Service to request storage commitment from a DICOM storage commitment SCP. This can either be the same as the storage destination or storage commitment can be requested from a different system depending on the system configuration.
Storage Commitment Request will be sent after a configurable delay of storing the objects. The Storage Commitment SCP will always send the N-EVENT-REPORT Request on a new association.

The ***syngo.via*** can also serve as a SCP for the DICOM Storage Commitment service. Additional to each successfully completed send job, modalities should trigger a Storage Commitment request for the safekeeping of the images sent to the ***syngo.via***.

4.1.2.4 Query

The C-FIND request to the remote SCP is invoked directly by the user. The remote SCP returns a list of responses with defined data, which are displayed to the user. The user can decide to start retrieving any of the responses or to issue another query.

The ***syngo.via*** supports as SCU

- Study Root Query Model.
- Patient Root Query Model
- Patient/Study Only Query Model
- Furthermore the SCU services may issue relational queries, if supported by the SCP node and required by the querying Application.

The C-FIND SCP will perform a query on the local data repository and return the matching items.

The ***syngo.via*** supports as SCP

- Study Root Query Model.
- Patient Root Query Model
- Patient/Study Only Query Model
- Furthermore the C-Find SCP service supports and negotiates relational queries.

4.1.2.5 Retrieve

The ***syngo.via*** initiates a C-MOVE request to the remote Retrieve SCP. The remote Retrieve SCP in turn starts C-STORE sub operations to the ***syngo.via*** Storage SCP.

The ***syngo.via*** supports as SCU

- Study Root Retrieve Model.
- Patient Root Query Model in case relational queries are supported
- Patient/Study Only Query Model in case relational queries are supported

The ***syngo.via*** responds to C-MOVE requests from a remote SCU. C-MOVE requests involve the ***syngo.via*** DICOM Query/Retrieve SCP application to initiate a C-STORE sub-operation to send image objects to a remote Storage SCP.

The ***syngo.via*** supports as SCP

- Study Root Retrieve Model.
- Patient Root Retrieve Model
- Patient/Study Only Retrieve Model

4.1.2.6 Modality Worklist

The ***syngo.via*** worklist SCU issues DICOM Modality Worklist requests using DIMSE C-FIND requests. The results in the C-FIND response are stored in ***syngo.via*** internal database and used for assigning subsequent processing steps in case instances are received via DIMSE C-STORE.

4.1.2.7 Print

The ***syngo.via*** DICOM print application supports print management DIMSE services as SCU.

The ***syngo.via*** Print SCU is invoked by the user interface to setup film-sheet layout and whenever an image is ready to be printed on film. The ***syngo.via*** will hold and maintain all data needed to compile a complete film-sheet from the data (images, layout and configuration) selected. Whenever a film-sheet is ready to be printed, the related data are used to supply the Information to the SOP Classes of the Print Management Service Class. A queue is maintained, in order to intermediately store several film-sheets in case of resource problems on the printer.

The ***syngo.via*** will supply and require the mandatory SOP Classes of the Print Management Service Class as well as the optional Print Job and Presentation LUT SOP Classes.

4.1.3 Sequencing of Real-World Activities

Storage / Storage Commitment:

The communication between ***syngo.via*** and an external DICOM node in case of triggering the transfer of objects from ***syngo.via*** to the external node is depicted in Figure 4.1-2 in more detail.

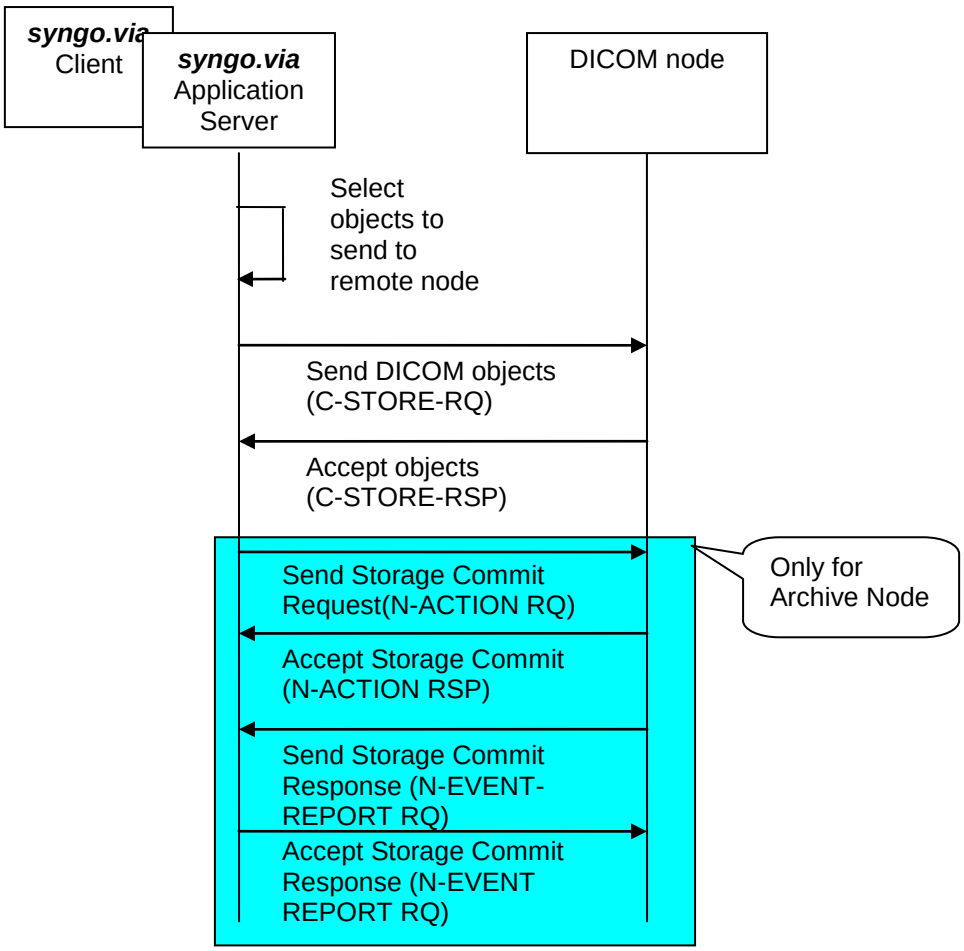

Figure 4.1-2: Sequence diagram – Storage / Storage Commitment

Query and Retrieval:

The communication between ***syngo.via*** and an external DICOM node in case of querying of objects from a remote DICOM node and retrieval to ***syngo.via*** is depicted in Figure 4.1-3 in more detail.

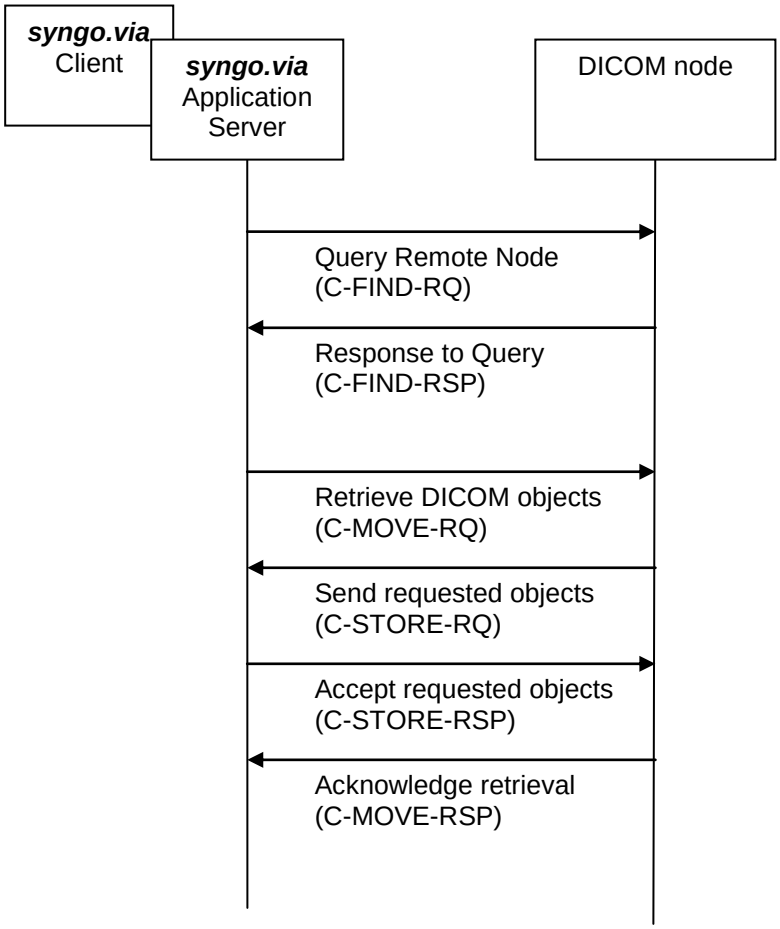

Figure 4.1-3: Sequence diagram – Query/Retrieve

Modality Worklist:

The communication between ***syngo.via*** and an external DICOM node in case of Modality Worklist requests from ***syngo.via*** to a remote DICOM node is depicted in Figure 4.1-4 in more detail.

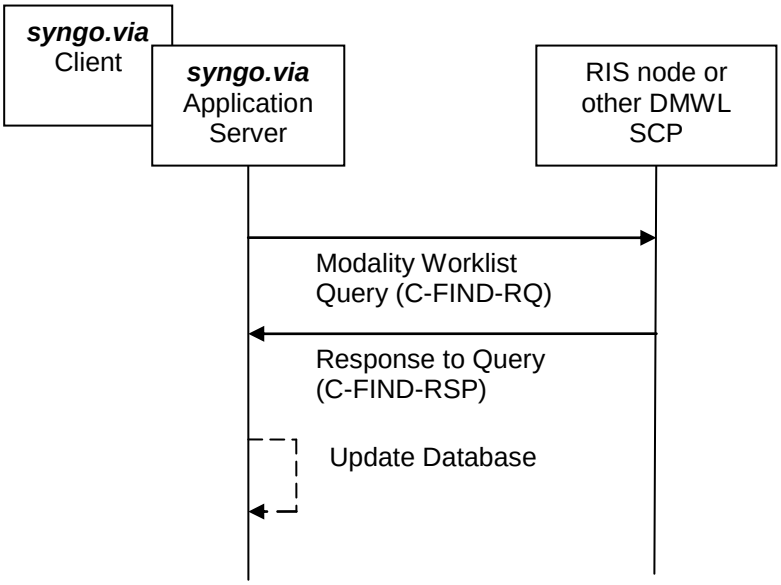

Figure 4.1-4: Sequence diagram – Modality Worklist

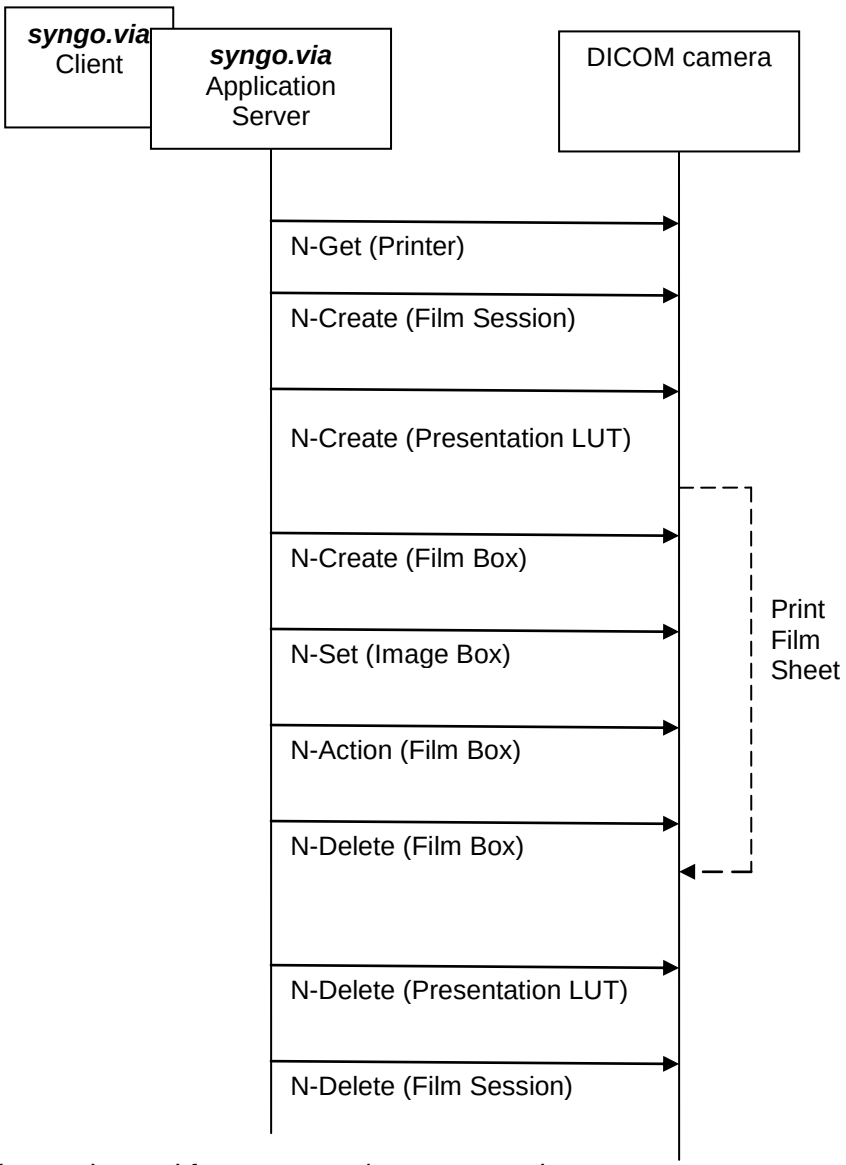
Printing:

The communication between ***syngo.via*** and an external DICOM camera in case of printing of images is depicted in Figure 4.1-5 in more detail.



All events (arrows) stand for a request / response pair.

4.2 AE SPECIFICATIONS

This section outlines the specifications for each of the Application Entities that are part of the ***syngo.via*** solution.

4.2.1 *syngo.via* AE

4.2.1.1 SOP Classes supported

This Application Entity provides Standard Conformance to the SOP Classes listed in Chapter 8 in Table 8-1 SOP CLASSES and Table 8-2: Supported Non-Storage SOP Classes

4.2.1.2 Association Establishment Policies

Table 4-1: Association Policies

Application Context Name	1.2.840.10008.3.1.1.1
PDU size	32 kB [1]
Maximum number of simultaneous associations as an association acceptor	12[1]
Maximum number of simultaneous associations as an association initiator	unlimited

The ***syngo.via*** AE contains a limitation of 512 kB for the maximum PDU size. By default, the maximum PDU size is set to 32kB.
The maximum number of simultaneous receiving associations (SCP) is configurable at run time, based on the system resources available. By default, the maximum number of associations is set to 12.
There is no inherent limit to the number of outgoing associations (SCU), other than limits imposed by the computer operating system. Nevertheless, transfer jobs to one distinct remote system (Send, Retrieve) will be run sequentially one after the other.

4.2.1.2.1 Asynchronous Nature

The ***syngo.via*** supports asynchronous communication (multiple outstanding transactions over a single association). On the SCU side the Window size proposed is infinite. On the SCP Side any non-infinite maximum size will be accepted.

Table 4-2: Asynchronous Nature as an Association Initiator

Maximum number of outstanding asynchronous transactions	Infinite

4.2.1.2.2 Implementation Identifying Information

Table 4-3: DICOM Implementation Class and Version

Implementation Class UID	1.3.12.2.1107.5.8.15.10.20090701
Implementation Version Name	syngo.via

[1] Default, the value is configurable

4.2.1.3 Association Initiation Policy

syngo.via initiates associations while processing the service operations and internal messages as shown below:

Table 4-4: Association initiation policies

Operation or Real-World Activity	Association for
Verification	C-ECHO
Send / Receive Instance	C-STORE
Storage Commitment	N-ACTION N-EVENT-REPORT
Querying a remote node	C-FIND
Retrieval of Instances	C-MOVE
Querying for Modality Worklist	C-FIND
Print Instance	N-GET N-SET N-CREATE N-ACTION N-DELETE N-EVENT-REPORT

4.2.1.3.1 Activity "Send To"

4.2.1.3.1.1 Description and Sequencing of Activities

Storage of DICOM object is either triggered internally in the ***syngo.via*** (either “Send to” from the UI or triggered by auto-archiving events; see also Figure 4.1-2) or by a C-MOVE request initiated by an external DICOM AE to ***syngo.via***.

If an association to a remote Application Entity could successfully be established, each image will be transferred one after another via the same open association.

Automatic retry mechanism:
it is configurable, how many retry attempts are performed before the job goes to failed.

Retries are performed if:

- the network connection has been lost from SCU perspective. In this case retry is performed as soon as the network connection is available again
- the partner is not reachable for other reasons (e.g. partner node has broken down) that appear to be transient. The number of retries and the interval between the retries are configurable (the default of retries is 2 and the interval is 30 seconds)

In case the transfer fails for a permanent reason (rejection permanent reported by SCP, all Presentation Contexts refused, …) the transfer will not be retried.

4.2.1.3.1.2 Proposed Presentation Contexts

For all supported Transfer objects (see SOP Classes in Table 8-1) the following Transfer Syntaxes are supported:

Table 4-5: Proposed Presentation Contexts for Storage

UID value	Transfer Syntax
1.2.840.10008.1.2.1	Explicit Value Representation Little Endian native

UID value	Transfer Syntax
1.2.840.10008.1.2	Implicit Value Representation Little Endian native
1.2.840.10008.1.2.4.70	JPEG Lossless, Non-Hierarchical, First-Order Prediction (Process 14) lossless compressed
1.2.840.10008.1.2.4.90	JPEG 2000 Image Compression (Lossless Only) compressed
1.2.840.10008.1.2.5	RLE Lossless compressed
1.2.840.10008.1.2.4.51	JPEG Extended (Process 2 & 4) lossy compressed
1.2.840.10008.1.2.4.50	JPEG Baseline (Process 1) lossy compressed
1.2.840.10008.1.2.4.91	JPEG 2000 Image Compression lossy compressed

Depending on the Configuration, the Storage SCU Service will choose a compressed or uncompressed Transfer Syntax among those accepted by the SCP. The Transfer Syntax chosen is the preferred one among the compressed and uncompressed ones. The preference order is the order of occurrence in the configuration. It is possible to configure for a specific node, which Transfer Syntax shall be used and which one shall be excluded. The configuration can even be extended, based on the combination of SOP Classes and supported Transfer Syntax. The configuration can be performed in the Service UI.
An instance will be JPEG lossless compressed only if it fulfills the following criteria:

- is an image and not already compressed
- Photometric Interpretation (0028,0004) is MONOCHROME or RGB or YBR_FULL or YBR_FULL_422
- Bits Allocated (0028,0100) equal to 16'D or 8'D
- Bits Stored (0028,0101) is >8
- High Bit (0028,0102) equal to Bits Stored (0028,0101) - 1
- Pixel Representation (0028,0103) equal to 0'D

An instance will be JPEG lossy compressed only if it fulfills the following criteria:

- is an image and not already compressed
- photometric interpretation (0028,0004) is MONOCHROME or RGB
- Bits Allocated (0028,0100) equal to 16'D or 8'D
- Bits Stored (0028,0101) equal to 12'D or 8'D
- High Bit (0028,0102) equal to Bits Stored (0028,0101) - 1
- Pixel Representation (0028,0103) equal to 0'D

An instance will be JPEG 2000 lossless compressed only if it fulfills the following criteria:

- is an image and not already compressed
- Photometric interpretation (0028,0004) not MONOCHROME or RGB or YBR_FULL or YBR_FULL_422
- Bits Allocated (0028,0100) not 16'D or 8'D

An instance will be JPEG 2000 lossy compressed only if it fulfills the following criteria:

- is an image and not already compressed
- Photometric interpretation (0028,0004) is MONOCHROME or RGB
- Bits Stored (0028,0101) equal to 12'D or 8'D

There is no extended negotiation as an SCU.

4.2.1.3.1.3 SOP specific Conformance for SOP classes

The ***syngo.via*** will not add or change private attributes by default, even in case objects are compressed or image header is updated according to IHE [2] Patient Information Reconciliation.

The behavior of ***syngo.via*** when encountering status codes in a C-STORE response is summarized in Table 4-6:

Table 4-6: DICOM Command Response Status Handling Behavior

Service Status	Further Meaning	Error Code	Behavior
Error	Duplicate SOP Instance UID: some of the instances sent to the SCP were already available there.	0x0111	Job is continued till the end and marked as Completed(!). A warning mentions that some images were already available on the remote node. These will not be overwritten.
Error	Out-Of-Resources: The remote node has run out of resources (storage resources for example)	0xA7XX	Job is continued till the end. An according message is shown to the user.
Error	Any other DIMSE Error Status	0xXXXX	Job is continued till the end. An according message is shown to the user. Error is logged in the system log.
Error	Sending partially or completely failed	Any none null Code	Failure reported to user (percentage of transferred instances is shown)
Success	Image is successfully stored on file system.	0000	Success reported to user

Table 4-7: DICOM Command Communication Failure Behavior

Exception	Behavior
Timeout	Failure reported to user (Timeout configurable; default 30s)
Association Aborted	Failure reported to user

4.2.1.3.1.4 Encapsulation of SOP classes generated by *syngo.via*

Some PACS systems do not support specific SOP classes, like for example:

- Encapsulated PDF (1.2.840.10008.5.1.4.1.1.104.1)
- Real World Value Mapping (1.2.840.10008.5.1.4.1.1.67)
- Spatial Registration (1.2.840.10008.5.1.4.1.1.66.1)
- Segmentation (1.2.840.10008.5.1.4.1.1.66.4)

In order to enable archiving of instances of such SOP classes, ***syngo.via*** packs them into a Basic Text Structured Report (SR) instance to enforce a SOP Class UID (0008,0016) '1.2.840.10008.5.1.4.1.1.88.11', supported by most PACS systems. In case that a PACS system does not even support structured reports, the instance will be packed into a Secondary Capture (SC) image with the SOP Class UID (0008,0016) '1.2.840.10008.5.1.4.1.1.7' if clinical administrator chooses this option.
A well defined list (see Table 4-8) of ***syngo.via*** internally generated objects will be packed. The bulk data (Content Sequence (0040,A730), Modality Image Header Type (0029,0008), Modality Image Header Version (0029,0009), Modality Image Header Info (0029,0010), Pixel Data (7FE0,0010) and Series Description (0008,103E)) of such generated instances contain a coding indicating that this is a Siemens private object created for archival purposes only.

Table 4-8: Packed SOP Classes

SOP Class Name	SOP Class UID

SOP Class Name	SOP Class UID
Basic Text Structured Report	1.2.840.10008.5.1.4.1.1.88.11

Spatial Registration Storage	1.2.840.10008.5.1.4.1.1.66.1
Surface Segmentation Storage	1.2.840.10008.5.1.4.1.1.66.5

4.2.1.3.2 Activity "Send Initial Storage Commitment"

4.2.1.3.2.1 Description and Sequencing of Activities

After sending Images to a configured Archive, the ***syngo.via*** will initiate a Storage Commitment request, if configured (see also Figure 4.1-2). The ***syngo.via*** initiates a new association in order to send the N-ACTION-RQ to the SCP.
The Storage Commitment Request will be sent after the storage, delayed by a configurable amount of time in order to make sure that the remote node had enough time to index correctly the instances received (default delay is 10 minutes).

syngo.via will accept the N-Event-Report-RQ in the same association when sent immediately after the N-ACTION-RSP but will not wait for it (association will be closed after 3 seconds).

The system may issue one N-ACTION-RQ for a complete set (bundle) of instances or issue one N-ACTION-RQ per instance. This behavior is configurable; the default value is "bundled".

4.2.1.3.2.2 Proposed Presentation Contexts

Table 4-9: Proposed Presentation Contexts for Storage Commitment

Presentation Context Table					
Abstract Syntax		**Transfer Syntax**		**Role**	**Ext. Neg.**
Name	**UID**	**Name List**	**UID List**

		Explicit VR Big Endian	1.2.840.10008.1.2.2		

4.2.1.3.2.3 SOP specific Conformance for SOP classes

The behavior of ***syngo.via*** when encountering status codes in an N-ACTION response is summarized in Table 4-10:

Table 4-10: DICOM Command Response Status Handling Behavior

Service Status	Further Meaning	Error Code	Behavior
Error	Any failure that occurs	Any none null Code	Failure reported to user; corresponding object(s) will be marked as "Archived failed"
Success	All Instances are available on the remote node	0000	Success reported to user; in case failures exist, the corresponding instances will be marked as "Archived failed"

Table 4-11: DICOM Command Communication Failure Behavior

Exception	Behavior
Timeout	Failure reported to user (Timeout configurable; default 30s); the request will be retried
Association Aborted	Failure reported to user; the request will be retried

4.2.1.3.3 Activity "Send Reply to Commitment Requests on separate associations"

4.2.1.3.3.1 Description and Sequencing of Activities

In case the ***syngo.via*** has received a Storage Commitment request (N-ACTION-RQ) from an external node, the ***syngo.via*** initiates a new association in order to send the N-EVENT-REPORT-RQ to the SCU (Storage Commitment initiator).

4.2.1.3.3.2 Proposed Presentation Contexts

The behavior of ***syngo.via*** when encountering status codes in an N-EVENT-REPORT response is summarized in Table 4-13:

Table 4-13: DICOM Command Response Status Handling Behavior

Service Status	Further Meaning	Error Code	Behavior
Error	Storage Commitment Reply ignored.	Any none null Code	Storage Commitment will be repeated.
Success	Storage Commitment Reply noticed.	0000	Success reported to user.

syngo.via does not support the optional Storage Media File-Set ID and UID attributes in the N-ACTION.

4.2.1.3.4 Activity "Querying a Remote Node" for Instances

4.2.1.3.4.1 Description and Sequencing of Activities

The associated Real-World activity is a C-Find request initiated by the user (see also Figure 4.1-3). The user specifies some attributes and will send a C-Find request (according to the query model) and will then return the results to the initiating application.

4.2.1.3.4.2 Proposed Presentation Contexts

The ***syngo.via*** will propose Presentation Contexts as shown in the following table:

4.2.1.3.4.3 SOP Specific Conformance Statement to Query SOP classes

The ***syngo.via*** checks for the following status codes in the Query SCP's C-FIND-Response:

Table 4-16: DICOM Command Response Status Handling Behavior

Service Status	Further Meaning	Error Code	Behavior
Error	e.g. Out of Resources; Cancellation; Identifier does not match SOP Class; Unable to process	Any none null Code	Failure reported to user

The ***syngo.via*** supports the following query levels:

- Patient
- Study

- Series
- Instances

Matching Keys on Series and Instance Levels are not supported by ***syngo.via*** as SCU.

The following table lists the various attributes at Patient, Study, Series and Instance levels, which can be used for **relational** queries as well as return values for display. The display capabilities are highly configurable and “yes” indicates that it is possible to configure display of the data:
A “yes” in the **UI** column will indicate that the attribute may be visualized when browsing the Query results with the Browser. The Browser display is additionally influenced by the related Browser configuration

4.2.1.3.6 Activity "Querying a Remote Node" for Modality Worklist

4.2.1.3.6.1 Description and Sequencing of Activities

A network application will perform worklist queries with the C-FIND request at regular intervals. In addition it can be triggered by immediate request. The received worklist items will be compared with the contents of the local workflow management database. New items will be inserted into workflow management database. The results are used to prepare subsequent workflow tasks, when receiving instances.

- Search Key Attributes of the Worklist C-FIND

The ***syngo.via*** DICOM worklist SCU supports “broad worklist queries” with all required search keys. The following tables describe the “broad query” search keys that the SCU supports. The list is configurable in ‘DICOM Modality Worklist Query’.

4.2.1.3.7 Activity "Printing to a Remote Node"

4.2.1.3.7.1 Description and Sequencing of Activities

Whenever a film-sheet is prepared by the user, it is forwarded to the Printer Job queue. As soon as the associated Printer device is available the job is activated and association is set up.

The film sheet is internally processed, converted to a Standard/1,1 page and then the page image is sent. Status is controlled by awaiting any N-EVENT-REPORT message all through the transfer until the last image or film-sheet is sent.

If the response from the remote application contains a status other than Success or Warning the printing is stopped and the job status is set to Aborted.

4.2.1.3.7.3 SOP Specific Conformance Statement for Print SOP classes

The ***syngo.via*** Print SCU conforms to the DICOM Basic Grayscale Print Management Meta SOP Class and the Basic Color Print Management Meta SOP Class.

The application uses a configuration platform to define the properties of the connected DICOM SCP, e.g.:

- supported film sizes of the connected DICOM SCP
- supported film formats of the DICOM SCP

The printing is only suspended in the case of a failure return status of the SCP.

The command communication failure behavior for the following subchapters is identical. So it has been put as only one table to this position:

Table 4-28: DICOM Command Communication Failure Behavior

exception	Behavior
Timeout	Failure reported to user (Timeout configurable; default 30s)
Association Aborted	Failure reported to user

4.2.1.3.7.3.1 Basic Film Session SOP Class

The Basic Film Session information object definition describes all the user-defined parameters, which are common for all the films of a film session. The Basic Film Session refers to one or more Basic Film Boxes that are printed on one hardcopy printer.

The ***syngo.via*** Print Management SCU supports the following DIMSE Service elements for the Basic Film Session SOP Class as SCU:

- N-CREATE
- N-DELETE

The Basic Film Session SOP Class N-CREATE-RQ (SCU) uses the attributes listed in the table below:

Table 4-29: Attributes of N-Create-Request of Basic Film Session

Attribute Name	Tag	Usage SCU	Supported Values
Number of Copies	(2000,0010)	U	1
Medium Type	(2000,0030)	U	BLUE FILM
			CLEAR FILM
			PAPER

The number of Copies sent to the DICOM Printer is always 1, a number higher than 1 is not supported in this version.

The Affected SOP Instance UID received with N-CREATE-RSP message will be kept internally and used for later requests (e.g. N-DELETE-RQ) on the Basic Film Session (see table below):

Table 4-30: Requested SOP Instance UID for Basic Film Session

Attribute Name	Tag	Source of Information
Requested SOP Instance UID	(0000,1000) --> (0000,1001)	Affected SOP Instance UID of N-CREATE-RSP on Basic Film Session

The N-DELETE-RQ on the Basic Film Session SOP Class is used to remove the complete Basic Film Session SOP Instance hierarchy.

The Basic Film Session SOP class interprets the status codes (from N-CREATE-RSP messages) listed in the table below:

Table 4-31: DICOM Command Response Status Handling Behavior

Service Status	Further Meaning	Error Codes	Behavior
Failed	Film session SOP instances hierarchy does not contain film box SOP instances	C600	Print job fails
	Unable to create print job, print queue is full	C601	Print job fails

4.2.1.3.7.3.2 Basic Film Box SOP Class

The Basic Film Box information object definition describes all the user-defined parameter of one film of the film session. The Basic Film Box information description defines the presentation parameters, which are common for all images on a given sheet of film.

The Basic Film Box refers to one or more Image Boxes.

Supported Service Elements as SCU are:

- N-CREATE
- N-ACTION
- N-DELETE

The Basic Film Box SOP Class N-CREATE-RQ message uses the attributes listed below. The actual values for each attribute depend on DICOM printer configuration within the ***syngo.via*** DICOM Print Management SCU:

Table 4-32: Attributes for N-CREATE-RQ of Basic Film Box

Attribute Name	Tag	Usage SCU	Supported Values

For Page Mode printing, the Image Display format used is Standard\1,1.

The N-CREATE-RSP message from the Print SCP includes the Referenced Image Box Sequence with SOP Class/Instance UID pairs which will be kept internally to be further used for the subsequent Basic Image Box SOP Class N-SET-RQ messages.

When all Image Boxes (including parameters) for the film-sheet have been set, the ***syngo.via*** print manager will issue a N-ACTION-RQ message with the SOP Instance UID of the Basic Film Box and the Action Type ID of 1.

The affected SOP Instance UID received with N-CREATE-RSP message will be kept internally and used for later requests (e.g. N-DELETE-RQ) on the Basic Film Box (see below):

Table 4-33: Requested SOP Instance UID for Basic Film Box

Attribute Name	Tag	Source of Information
Requested SOP Instance UID	(0000,1000) => (0000,1001)	Affected SOP Instance UID of N-CREATE-RSP on Basic Film Box

The Basic Film Box SOP class interprets the status codes listed in the table below:

Table 4-34: DICOM Command Response Status Handling Behavior for Basic Film Box SOP Class

Service Status	Meaning	Error Codes	Behavior

Service Status	Meaning	Error Codes	Behavior
Failure	Unable to create print job, print queue is full	C602	Print job is marked as failed and the reason is logged

Warning	Film box does not contain image box (empty page)	B603	Print job continues and warning is logged
	Requested MinDensity or MaxDensity outside of Printer's operating range	B605	Print job continues and warning is logged
Success	Film accepted for printing	0000	Print job continues

4.2.1.3.7.3.3 Basic Grayscale Image Box SOP Class

The Basic Grayscale Image Box information object definition is the presentation of an image and image related data in the image area of a film. The Basic Image Box information describes the presentation parameters and image pixel data, which apply to a single image of a sheet of film.

The Grayscale Image Box SOP Class uses only the N-SET-RQ with the attributes listed in the table below:

Table 4-35: Attributes for N-SET-RQ of Basic Grayscale Image Box

Attribute Name	Tag	Usage SCU	Supported Values
Image Position	(2020,0010)	M	1

The Grayscale Image Box SOP class interprets the status codes as listed below:

Table 4-36: DICOM Command Response Status Handling Behavior for Basic Grayscale Image Box SOP Class

Service Status	Further Meaning	Error Codes	Behavior
Failure	Image contains more pixel than printer can print in Image Box	C603	Print job is marked as failed and the reason is logged
	Insufficient memory in printer to store the image	C605	Print job is marked as failed and the reason is logged
Warning	Requested MinDensity or MaxDensity outside of Printer's operating range	B605	Print job continues and the reason is logged
Success	Image successfully stored in Image Box	0000	Print job continues

4.2.1.3.7.3.4 Basic Color Image Box SOP Class

The Basic Color Image Box information object definition is the presentation of an image and image related data in the image area of a film. The Basic Image Box information describes the presentation parameters and image pixel data, which apply to a single image of a sheet of film.

The Color Image Box SOP Class uses only the N-SET-RQ with the attributes listed below:

Table 4-37: Attributes for N-SET-RQ of Basic Color Image Box

Attribute Name	Tag	Usage SCU	Supported Values
Image Position	(2020,0010)	M	1
BASIC Color Image Sequence	(2020,0111)	M

The Color Image Box SOP class interprets the status codes listed below:

Table 4-38: DICOM Command Response Status Handling Behavior for Basic Color Image Box SOP Class

Service Status	Meaning	Error Codes	Behavior

Failure	Image contains more pixel than printer can print in Image Box	C603	Print job is marked as failed and the reason is logged
	Insufficient memory in printer to store the image	C605	Print job is marked as failed and the reason is logged
Warning	Image size larger than image box size	B604	Print job continues and the reason is logged
Success	Image successfully stored in Image Box	0000	Print job continues

4.2.1.3.7.3.5 Presentation LUT SOP Class

The objective of the Presentation LUT is to realize image hardcopy printing tailored for specific modalities, applications and user preferences.

The output of the Presentation LUT is Presentation Values (P-Values). P-Values are approximately related to human perceptual response. They are intended to facilitate common input for hardcopy. P-Values are intended to be independent of the specific class or characteristics of the hardcopy device.

The Presentation LUT SOP Class uses only the N-CREATE-RQ with the attributes listed below:

Table 4-39: Attributes for N-CREATE-RQ of Presentation LUT SOP Class

Attribute Name	Tag	Usage SCU	Supported Values
Presentation LUT Shape	(2050,0020)	U	IDENTITY

The affected SOP Instance UID received with N-CREATE-RSP message will be kept internally and is used for later requests on the Basic Film Box (N-CREATE-RQ) and on the Presentation LUT (N-DELETE-RQ) - see below:

Table 4-40: Requested SOP Instance UID for Presentation LUT SOP Class

Attribute Name	Tag	Source of Information
Requested SOP Instance UID	(0000,1000) => (0000,1001)	Affected SOP Instance UID of N-CREATE-RSP on Presentation LUT

The Presentation LUT SOP class interprets the status codes listed below:

Table 4-41: DICOM Command Response Status Handling Behavior for Presentation LUT SOP Class

Service Status	Further Meaning	Error Codes	Behavior
Warning	Requested MinDensity or MaxDensity outside of HCD's operating range. HCD will use its respective minimum or maximum density value instead.	B605	Print job continues and the reason is logged
Success	Presentation LUT successfully created	0000	Print job continues

4.2.1.3.7.3.6 Printer SOP Class

The Printer SOP Class is the possibility to monitor the status of the hardcopy printer in a synchronous and in an asynchronous way.

The SCU uses the mandatory N-EVENT-REPORT DIMSE service to monitor the changes of the printer status in an asynchronous way.

It can directly ask the Printer (SCP) for its status or receive Events from the Printer asynchronously:

- N-GET as SCU
- N-EVENT-REPORT as SCU

In both cases the information listed in the two following tables is supported:

Table 4-42: Used Printer N-EVENT-REPORT-RQ attributes

Event-type Name	Event	Attributes	Tag	Usage SCU
Normal	1	-	-	-
Warning	2	Printer Status Info	(2110,0020)	U
Failure	3	Printer Status Info	(2110,0020)	U

Attribute Name	Tag	Usage SCP	Supported Values
Printer Status	(2110,0010)	M	NORMAL, FAILURE, WARNING
Printer Status Info	(2110,0020)	M	See table in chapter 8.6 possible values.

4.2.1.3.7.3.7 Print Job SOP Class

The Print Job SOP Class is the possibility to monitor the execution of the print process.

The ***syngo.via*** DICOM Print Management application supports the optional N-EVENT-REPORT DIMSE Service to receive the changes of the Print Job Status in an asynchronous way. It can receive Events from the Print SCP asynchronously.

Note: The ***syngo.via*** DICOM Print Management application does not support receiving N-EVENT-REPORT requests from the camera during print sessions. Normally this is configurable in the camera. Refer to Table 4-44: Used Print Job N-EVENT-REPORT attributes for the N-EVENT-REPORT attributes the ***syngo.via*** DICOM Print Management application can handle.

Table 4-44: Used Print Job N-EVENT-REPORT attributes

4.2.1.4 Association Acceptance Policy

The ***syngo.via*** attempts to accept a new association for

- DIMSE C-STORE
- DIMSE N-ACTION (Storage Commitment)
- DIMSE C-MOVE
- DIMSE C-FIND

service operations.

Generally associations are accepted if all of the following conditions are true:

- The "called AET" matches one of the configured Application Entity Titles of the ***syngo.via***.

- The "calling AET" is known (configured) at ***syngo.via***. This check can be disabled.
- The maximum number of incoming associations is not reached.
- At least one Presentation Context with a minimum of one suitable transfer syntax has been proposed as defined by the "Presentation Context Tables" in the following subsections.
- The system has enough available resources to perform the service requested (e.g. enough free disk space, less than the max. number of associations are already in use)

4.2.1.4.1 Activity "Receive Instances"

4.2.1.4.1.1 Description and Sequencing of Activities

The ***syngo.via*** receiving process will accept an association, receive any objects transmitted on that association and store the objects on disk.

4.2.1.4.1.2 Accepted Presentation Contexts

For all supported Transfer objects (see SOP Classes in Table 8-1) the Transfer Syntaxes described in Table 4-5 are supported.

Generally all Presentation Contexts are accepted as long as they contain at least one suitable Transfer Syntax. All other Presentation Contexts are rejected.

If a Proposed Presentation Context contains more than one Transfer Syntax, the one in the following priority list is chosen (if applicable for the SOP class):

Table 4-45: Priority list of chosen Transfer Syntax

Order	Presentation Context
1	Explicit Value Representation Little Endian
2	Implicit Value Representation Little Endian
3	Explicit Value Representation Big Endian
4	JPEG Lossless, Non-Hierarchical, First-Order Prediction (Process 14)
5	JPEG 2000 Image Compression (Lossless Only)
6	RLE Lossless
7	JPEG Extended (Process 2 & 4)
8	JPEG Baseline (Process 1)
9	JPEG 2000 Image Compression

There is no Extended Negotiation as an SCP

4.2.1.4.1.3 SOP-specific Conformance Statement for Storage SOP classes

The ***syngo.via*** conforms to the Full Storage Class at Level 2.

In case of a successful C-STORE operation, the image has successfully been written on disk either in Explicit Little Endian format or in the compression format received.

The Storage AE of the ***syngo.via*** returns the status “success” when the data is stored to disk and a minimal image header validation has been performed.

The following header attributes must be available and filled:

- Patient Name,
- Study Instance UID,
- Series Instance UID and
- SOP Instance UID.

Table 4-46: Storage C-STORE Response Status

Service Status	Further Meaning	Error Code	Reason
success	success	0x0000	Image received correctly (success notification is done after receiving, before indexing and storing)
failure	Out-of-resource	0xA700	Not resource left in the Short Term Storage
failure	Unable to Process	0xCxxx	Error during instance reception
failure	DataSet does not match SOP Class	0xA9xx	The DataSet is not conform to the SOP Class contained in the resource.

Restriction: successful operation does not guarantee storage of header data in the database.

4.2.1.4.1.4 Other SOP specific behavior

- If an image is received that is already stored in the database - identified by the SOP Instance UID - the new image will be ignored. The existing instance is not superseded.
- The Patient Quadruplet (Patient's Name, Patient ID, Date of Birth, Patient Sex) is internally used for unique identification. The Patient ID is specified as a "type 2" attribute by DICOM. Therefore the attribute must be in the message but it may be empty. If the Patient ID is missing one will be generated and inserted to the index by the ***syngo.via*** for internal purposes.

4.2.1.4.2 Activity “Receive Initial Storage Commitment Request”

4.2.1.4.2.1 Description and Sequencing of Activities

When receiving an initial Storage Commitment request (N-ACTION-RQ) the ***syngo.via*** will accept it with an N-ACTION-RSP and trigger a check in the database for the required instances.

The subsequently issued N-EVENT-REPORT-RQ will always be sent in a second association.

syngo.via will store SOP instances indefinitely unless the instances are manually deleted by a user or automatically by a watermark system, if the images have been routed to a PACS and the PACS committed the images back to ***syngo.via***. The manual deletion may lead to deletion of acknowledged instances before archiving to PACS has happened.

4.2.1.4.2.2 Accepted Presentation Contexts

Table 4-47: Acceptable Presentation Contexts for Storage Commitment and Activity "Receive Commitment Request

Presentation Context Table					
Abstract Syntax		**Transfer Syntax**		**Role**	**Ext. Neg.**

		Explicit VR Little Endian	1.2.840.10008.1.2.1		
		Explicit VR Big Endian	1.2.840.10008.1.2.2		

4.2.1.4.2.3 SOP-Specific Conformance Statement for SC SOP classes

There are only 2 different return status codes for the commitment request itself. They indicate only whether the request was successfully received or not. The real response is sent via N-EVENT-REPORT-RQ either on the same or on a different association.

Success or failure of Storage Commitment will be signaled via the N-EVENT-REPORT primitive.

The SCU is responsible for creating a unique Transaction UID. The SCP will not check, whether the UID is already in use or not.

Table 4-48: Storage Commitment N-EVENT-REPORT Response Status

Service Status	Further Meaning	Error Codes	Reason
success	success	0x0000	Image received correctly (success notification is done after receiving, before indexing and storing)
failure	Unable to Process	0xCxxx	Error during instance reception
failure	DataSet does not match SOP Class	0xA9xx	The DataSet is not conform to the SOP Class contained in the resource.

4.2.1.4.3 Activity "Receive Instance Retrieve Requests"

4.2.1.4.3.1 Description and Sequencing of Activities

The ***syngo.via*** responds to requests issued by an SCU with the query model Patient Root, Study Root and Patient/Study Only.

Hierarchical and relational retrieve operations are both supported.

4.2.1.4.3.2 Accepted Presentation Contexts

The ***syngo.via*** will accept Presentation Contexts as shown in Table 4-49.

Table 4-49: Acceptable Presentation Contexts Activity "Receive Instance Retrieve Request"

Study Root Query/ Retrieve Information Model - FIND	1.2.840.10008.5.1.4.1.2.2.1	Relational Query will be negotiated if necessary as defined in DICOM PS3.4

4.2.1.4.3.3 SOP Specific Conformance Statement to Query SOP classes

The ***syngo.via*** Query AE supports all Query attributes of Table 4-18.

The query attribute contents will be treated case-sensitive except all PN attributes, which will always be treated case-insensitive. Additionally following attributes are also treated case-insensitive:

- "Body Part Examined" (0018,0015)

- “Study Description” (0008,1030)

Wildcards (*, ?) will not replace trailing component separators (=).

The Query AE of the ***syngo.via*** does not return any Media File-Set ID or UID, they always return the Retrieve AET (0008,0054). Furthermore, "Instance Availability" (0008,0056) is always returned.

Enterprise Query:

It is possible to group several ***syngo.via*** systems in an “Enterprise Group” (via configuration). A special Query SCP AET is available which spans the Query to the complete Enterprise Group. This AET is automatically created and has always the following syntax: “<Hostname>_E”, where <Hostname> is the AET of the corresponding ***syngo.via*** server, automatically shortened to 14 characters in order to keep the total AET length beneath 16 char (DICOM Conformance).
A Query sent to this AET will return all matching attributes present in all ***syngo.via*** systems configured in the Enterprise Group. The returned Retrieve AET allows to retrieve the instances directly from the ***syngo.via*** storing them.

4.2.1.4.3.4 Hierarchical and Relational Queries

Independent of the negotiation for relational queries, each C-FIND request is treated as if it was a relational query. The SCP allows any combination of keys at or above the provided Query/Retrieve level in the hierarchy. Keys below Query/Retrieve level return an error.

But if for example a series level attribute is requested in a study level query, an error will be returned by ***syngo.via*** (code “0106”).

4.2.1.4.3.5 Return Codes

Table 4-51: Query C-FIND / C-CANCEL Response Status

Service Status	Further Meaning	Error Codes	Reason
Processing failure	Parsing or translation of the DICOM request failed. A response could not be generated. The response could not be sent to the SCU. The query of the database failed.	C001	Any error during Query in the DataBase
Success	Matching is complete - No final Identifier is supplied	0000	
Pending	Matches are continuing - Current Match is supplied and any Optional Keys were supported in the same manner as Required Keys	FF00	Further Items will be returned;
Pending	Matches are continuing – Warning that one or more Optional Keys were not supported for existence and/or matching for this identifier	FF01	Further Items will be returned; Some of Required Attributes are not present in the DataBase

The maximum number of matches returned can be configured. The status of the final response will always be SUCCESS whether the clipping occurred or not.

4.2.1.4.4 Activity “Move SCP”

4.2.1.4.4.1 Description and Sequencing of Activities

The Retrieve AE responds to retrieve requests of an SCU. The requests are used to retrieve the referenced images. The Retrieve AE supports the query model Study Root.

4.2.1.4.4.2 Accepted Presentation Contexts

Table 4-52: Acceptable Presentation Contexts for Retrieve and Activity "MOVE SCP"

Presentation Context Table					
Abstract Syntax		**Transfer Syntax**		**Role**	**Ext. Neg.**

		Explicit VR Little Endian	1.2.840.10008.1.2.1		
		Explicit VR Big Endian	1.2.840.10008.1.2.2		

4.2.1.4.4.3 SOP Specific Conformance Statement for Move SCP Classes

At association establishment time the C-MOVE presentation context shall be negotiated. When the C-MOVE-RQ is processed, the Move Destination attribute (receiver of images) is ignored. However the Move Destination AE must conform to the DICOM conventions (value representation AE).

The Retrieve AE sends continuously C-MOVE responses to indicate progress about the de-archiving of images. The C-MOVE-RSP contains the Service parameters listed in Table 4-53.

Table 4-53: C-MOVE-RSP Service Parameters

Attribute	Meaning
Number of Remaining Sub-Operation	Is sent if the C-MOVE-RSP has the status Pending. Indicates the number of images which have not yet been sent.
Number of Completed Sub-Operation	Indicates the number of images which were sent.
Number of Failed Sub-Operation	Number of failing images within the Sending Association (C-STORE)
Number of Warning Sub-Operation	Always 0.

The final C-MOVE-RSP is sent after all images have been de-archived either successfully or unsuccessfully. No C-STORE operations are done in series of a C-MOVE-RQ for the Retrieve AE.

4.2.1.4.4.4 Hierarchical and Relational Queries

Independent of the negotiation for relational queries, each C-FIND request is treated as if it was a relational query. The SCP allows any combination of keys at or above the provided Query/Retrieve level in the hierarchy. Keys below Query/Retrieve level return an error.

But if for example a series level attribute is requested in a study level query, an error will be returned by ***syngo.via*** (code “0106”).

4.2.1.4.4.5 Return Codes

Table 4-54: Retrieve C-MOVE Response Status

Service Status	Further Meaning	Error Code	Reason
success	success	0x0000	Image received correctly (success notification is done after receiving, before indexing and storing)
failure	Out-of-resource	0xA700	Not resource left in the Short Term Storage
failure	Unable to Process	0xCxxx	Error during instance reception
failure	DataSet does not match SOP Class	0xA9xx	The DataSet is not conforming to the SOP Class contained in the resource.

4.3 NETWORK INTERFACES

4.3.1 Physical Network Interface

The ***syngo.via*** provides DICOM 3.0 TCP/IP network communication support as defined in Part 8 of [1]. The network communication is independent from the physical medium over which TCP/IP executes; it inherits this from the Windows OS system upon which it executes.

4.3.2 Additional Protocols

none

4.3.3 IPv4 and IPv6 Support

IPv4 and IPv6 are supported. Regarding IPv6 please note, that the complete networking infrastructure in the hospital (firewalls, DNS-Servers, …) must support IPv6 in order to get a functioning communication.

4.4 CONFIGURATION

4.4.1 AE Title/Presentation Address Mapping

AE Titles shall be unique within the hospital. A common way to achieve that is to use the hostname as part of the AE Titles. The string can be up to 16 characters and must not contain any extended characters. Only 7-bit ASCII characters (excluding Control Characters) are allowed according to DICOM [1].

4.4.1.1 Local AE Titles

The ***syngo.via*** allows to configure AETitles, Ports and Services in any wished way. Default delivery is that all services are using the same AE title and only one port number. In case the connected systems cannot handle this default, the customer service engineer is able to configure for each service its own AE title and Port number.

Parameter	Configurable	Default Value
Default AE title	Yes	hostname in uppercase characters; limited to 16 characters
Default Port	Yes	104

4.4.1.2 Remote AE Title/Presentation Address Mapping

4.4.1.2.1 Remote Association Initiators

All relevant remote applications that may setup DICOM associations towards ***syngo.via*** need to be configured in ***syngo.via***, before the association can be established. This behavior is configurable but it is recommended, not to change this behavior.

The mapping of external AE Titles to TCP/IP addresses and ports is configurable and initially set at the time of installation by Installation Personnel. Changes can later on also be performed by the local system administrator. The Application Entity Titles and supported transfer syntaxes need to be known for configuration.

To enable a fast and efficient configuration possibility Siemens will deliver templates for known configuration examples, so that the behavior (usage of one AE title, default port numbers, supported services) is determined already through the template.

Remote Application Entities can be configured without restarting the process.

4.4.1.2.2 Remote SCP's

For remote applications that shall be able to accept DICOM associations from ***syngo.via***, the following information needs to be available:

- Application Entity Title
- Host Name / IP address on which the remote application service runs
- Port number on which the remote application accepts association requests.

The remote system will be indicated in the UI of ***syngo.via*** with a logical name, that is also entered when configuring the node in the administration UI.

To enable a fast and efficient configuration possibility Siemens will deliver templates for known configuration examples, so that the behavior (usage of one AE title, default port numbers, supported services) is determined already through the template.

Remote Application Entities can be configured without restarting the process.

4.4.2 Parameters

The next table lists configuration parameters, which are true for all Application Entities.

Table 4-55: Parameter List

Parameter	Configurable	Default Value
max PDU size	Yes	32768 Bytes
time-out for accepting/rejecting an association request	Yes	30 s
time-out for responding to an association open/close request	Yes	30 s
time-out for accepting a message over network	Yes	30 s
time-out for waiting for data between TCP/IP-packets	Yes	5 s
time-outs for waiting for a Service Request/Response message from the remote node (Storage SCP/SCU)	Yes	30 s
time-outs for waiting for a Service Request/Response message from the remote node (Query/Retrieve SCP/SCU)	Yes	30 s
time-out for waiting for a C-MOVE-RSP	No	1200 s
number of image collection before saving to database	Yes	20
max matches query limit	Yes	100
max number of parallel receiving associations	Yes	12

5 MEDIA INTERCHANGE

5.1 IMPLEMENTATION MODELS

5.1.1 Application Data Flow Diagram

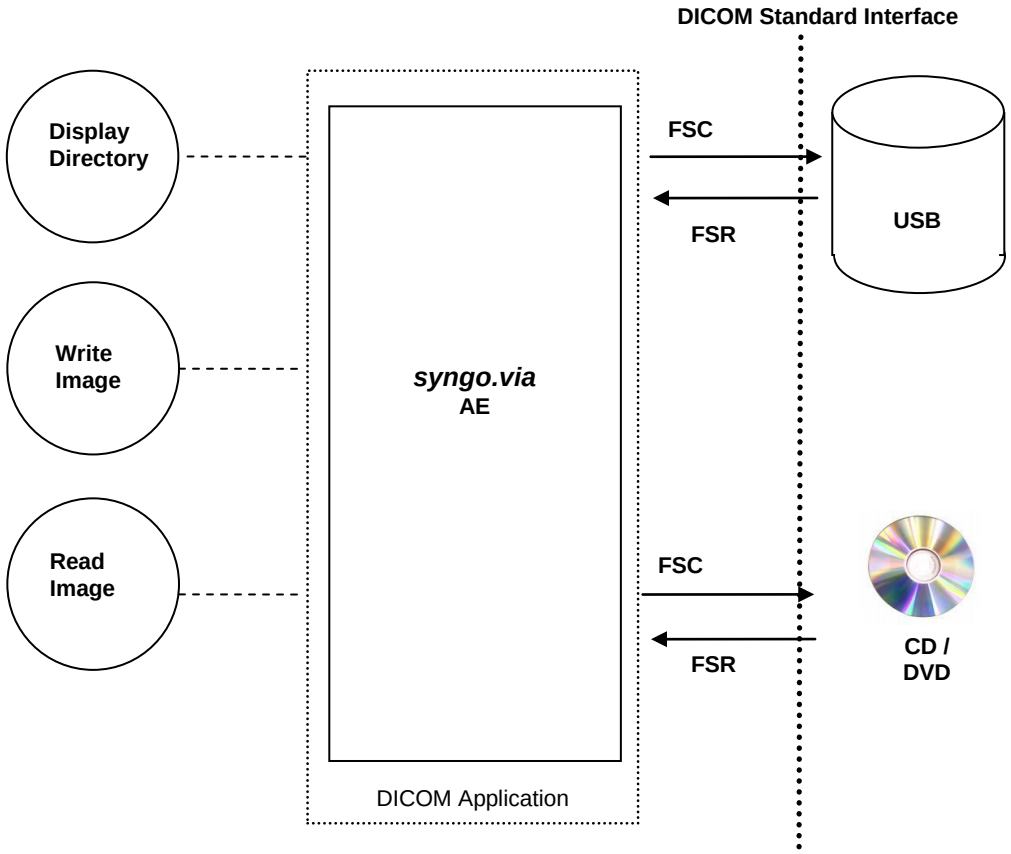

Figure 5.1-1: Media Interchange Application Data Flow Diagram

The ***syngo.via*** provides the functionality to Import or Export DICOM Instances from and to the File System. During export, a DICOMDIR may also be generated (user selection). A complete ISO Image ready-to-burn can also be generated. All SOP Classes defined in Table 5-3 and Table 5-4 are supported for the Import/Export functionality.

5.1.2 Functional definitions of AEs

The ***syngo.via*** application is capable of

- creating a new File-set in the File System (Export to ...)

- importing SOP Instances from the medium onto local storage
- writing the File-sets DICOMDIR information into the file system and joining it to an ISO image.

5.1.3 Sequencing of Real-World Activities

Whenever data shall be written to an external media, ***syngo.via*** will create a DICOMDIR from the selected data and create an ISO image of the selected data on the local hard disk. Depending on the selected data and options (selected media size, with or without compression) either General Purpose CD profile or DVD-J2K profile is used.

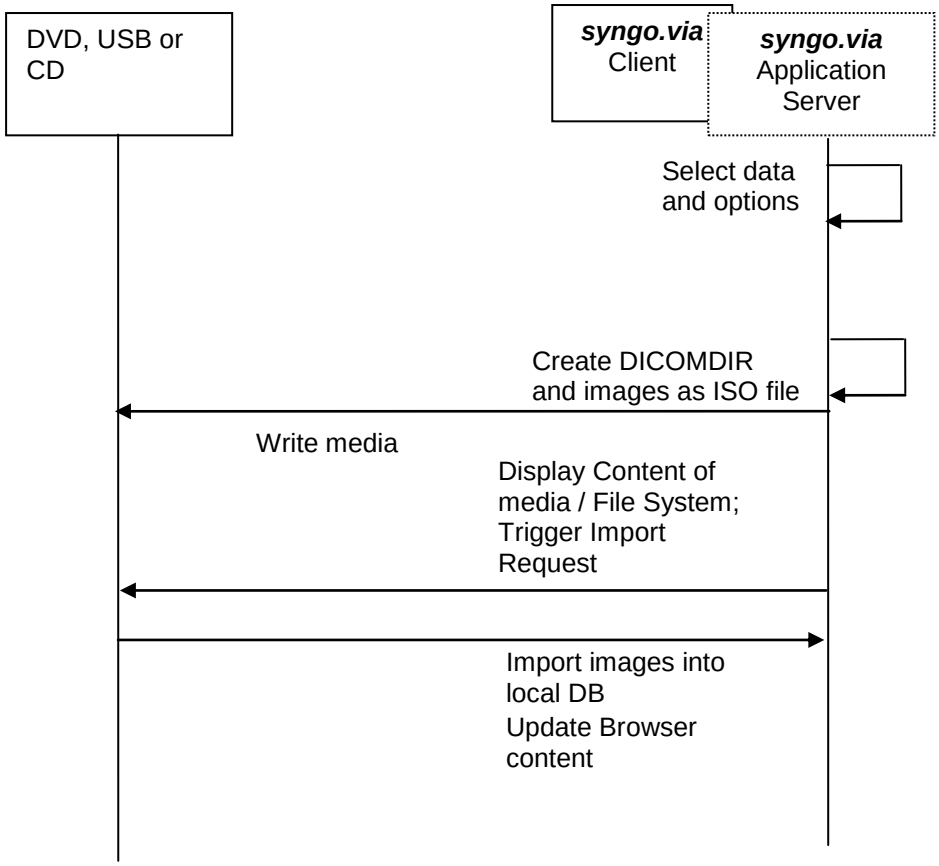

Figure 5.1-2: Sequence diagram – Media creation

5.1.4 File Meta Information for Implementation Class and Version

This section describes the values assigned to the File Meta Information attributes (see [1]part PS 3.10) that pertain to the Implementation Class and Version. The implementation Class UID and the Implementation Version name in the File Meta Header are the same as the values specified for networking.

Table 5-1: Implementation Class/Version Name - Media Interchange

File Meta Information Version	0x0001

Implementation Class UID	1.3.12.2.1107.5.8.15.10.20090701
Implementation Version Name	syngo.via

5.2 AE SPECIFICATIONS

5.2.1 Media Storage AE – Specification

The ***syngo.via*** provides conformance to the following Application Profiles as an FSC as well as an FSR. FSU is supported only on a non-optical storage device (e.g. USB stick).

In addition augmented conformance is provided to store extra data attributes important for the full feature support of the *syngo*®-based products. Details are listed below:

Table 5-2: Media - Application Profiles and Real-World Activities

Application Profiles Supported	Real-World Activity	Role	Service Class Option
AUG-GEN-CD	Browse Directory Information Import into Application Export to local Archive Media	FSR , FSC , FSU	Interchange
AUG-GEN-DVD			
AUG- GEN-DVD-J2K			
AUG- GEN-USB-J2K			
STD-GEN-CD	Browse Directory Information Import into Application Export to local Archive Media	FSR , FSC , FSU	Interchange
STD-GEN-DVD			
STD-GEN-DVD-J2K			
STD-GEN-USB-J2K			

5.2.1.1 File Meta Information for *syngo.via*

5.2.1.2 Real-World Activities

5.2.1.2.1 Activity "Browse Directory Information"

The ***syngo.via*** acts as FSR using the interchange option when requested to read the media directory.

The ***syngo.via*** will read the DICOMDIR and insert those directory entries that are valid for the application profiles supported, into a local database. The database then is used for browsing media contents.

Note: The "Icon Image Sequence" is also supported in DICOMDIR. But only those Icon Images with "Bits Allocated" (0028,0100) equal to 8 and size of 64x64 or 128x128 pixels are imported into database and are visible in the Browser.

5.2.1.2.1.1 Media Storage Application Profiles

See Table 5-2 for the Application Profiles listed that invoke this Application Entity for the Browse Directory Information

5.2.1.2.2 Activity "Import into Application"

The ***syngo.via*** application acts as FSR using the interchange option when requested to read SOP Instances from the medium into the application.

The SOP Instance selected from the media directory will be copied into the running Application. Only SOP Instances, that are valid for the application profile supported and supported by ***syngo.via*** (seeTable 8-1), can be retrieved from media.

5.2.1.2.3 Real-World Activity "Export to local Archive Media"

The ***syngo.via*** application acts as FSU (for media with existing DICOM file-set) or FSC (media not initialized) using the interchange option when requested to copy SOP Instances from the local storage to local Archive Medium. The activity as FSU is only possible as long as the local burning SW of ***syngo.via*** **Client** has not already processed the generated ISO file.

The ***syngo.via*** application will receive a list of SOP Instances to be copied to the local archive medium. Depending on the profile selected (Standard: uncompressed, with DICOMDIR; Patient: compressed with DICOMDIR) the SOP Instances will be taken and an ISO file is being generated that includes the DICOMDIR and the corresponding objects.

It is then up to ***syngo.via*** **Client** local configuration (if equipped with a local media burner) to burn the ISO file to the appropriate media.

5.2.1.2.4 Media Storage Application Profiles

See Table 5-2 for the Application Profiles listed that invoke this Application Entity for the local Archive Media Real-World Activity.

5.2.1.3 SOP Classes and Transfer Syntaxes

These Application Profiles are based on the Media Storage Service Class with the Interchange Option. In the table below (Table 5-3) the Transfer Syntax UID "RLE Lossless "only applies for decompression.

5.3 AUGMENTED AND PRIVATE APPLICATION PROFILES

5.3.1 Augmented Application Profiles

With no private Siemens Non-Images stored onto Medium, the definitions of the STD-GEN-XXX Profiles are applicable to denote the augmentations for the STD-GEN-XXX Standard Profile.

Table 5-5: Private SOP Classes and Transfer Syntaxes for Augmented Media Profiles

The Siemens non-image is typically used for raw data and 3D private data.

5.4 MEDIA CONFIGURATION

none

5.5 ATTRIBUTE CONFIDENTIALITY PROFILES

5.5.1 De-identification

The ***syngo.via*** application can de-identify attributes using two different levels. During export to filesystem it is the user responsibility to select the appropriate anonymization level.
For Level 1 anonymization private attributes are not included in anonymized Studies. For Level 2 anonymization all private attributes are included in anonymized Studies.

6 SUPPORT OF CHARACTER SETS

6.1 CHARACTER SETS FOR syngo.via

The ***syngo.via*** DICOM application supports the following character sets as defined in the three tables below.

Table 6-1: Single-Byte Character Sets without Code Extension

Character Set Description	Defined Term	ISO registration number	Character Set
Default repertoire	none	ISO_IR 6	ISO 646:

Multi-Byte Character Sets without Code Extension

Table 6-3: Multi-Byte Character Sets without Code Extension

Character Set Description	Defined Term	ISO registration number	Character Set
Unicode	ISO_IR 192	ISO 10646	Unicode in UTF-8
Chinese	GB18030	GB18030	GB 18030-2000 (China Association for Standardization)

Table 6-4: Multi-Byte Character Sets with Code Extension

Character Set Description	Defined Term	Standard for Code Extension	ESC sequence	ISO registration number	Character Set
Japanese	ISO 2022 IR 159	ISO 2022	ESC 02/04 02/08 04/04	ISO-IR 159	JIS X 0212: Supplementary Kanji set
Korean	ISO 2022 IR 149	ISO 2022	ESC 02/04 02/09 04/03	ISO-IR 149	KS X 1001: Hangul and Hanja

All SCS listed above are supported for incoming Data. When creating new Instances, the system will use the default SCS (or SCS List) configured on the machine.

When there is a mismatch between the given character set in attribute (0008,0005) and the characters in an IOD received by the system, then the following measures are taken to make the characters DICOM conform:

- Convert each illegal character to a '?'.

There are now three categories of character sets which have to be differentiated because of their different encoding formats:

- Conventional ISO character sets: ISO_IR 6, ISO 2022 IR 6, ISO_IR 100, etc. → encoded in ISO 2022
- ISO_IR 192 → encoded in UTF-8
- GB18030 → encoded in GB18030

It is not possible to recognize the following mismatches automatically on receiving or importing:

- An attribute value is encoded in ISO_IR 192 ←→ (0008,0005) contains a conventional ISO character set as primary character set
- An attribute value is encoded in GB18030 ←→ (0008,0005) contains a conventional ISO character set as primary character set
- An attribute value is encoded in ISO 2022 ←→ (0008,0005) contains ISO_IR 192

- An attribute value is encoded in ISO 2022 ←→ (0008,0005) contains GB18030

An IOD that contains one of the above mentioned inconsistencies is not DICOM conform. As these kinds of inconsistencies cannot be recognized by the system, the IOD will not be rejected but the character data might be corrupted.

7 SECURITY

7.1 SECURITY PROFILES

Time Synchronization Profiles: ***syngo.via*** acts as an NTP Client in the Maintain Time Transaction.

7.2 ASSOCIATION LEVEL SECURITY

It is possible to configure whether the SCP will only answer to known AETs or to any AET.

7.3 APPLICATION LEVEL SECURITY

- User must login with own password
- For configuration and Maintenance, Service Technician must login with a separate password.

8.6 DICOM Print SCU – detailed status displays

The following tables document the behavior of the ***syngo.via*** DICOM Print AE in response to messages received for the printer SOP class and the print job SOP class.

Definitions of camera symbols:

- Idle: Camera is installed and ready; idle icon is displayed.
- Interact: The user has to react in near future, but not immediately.
  Example: A camera was low in 8x10 clear sheets: LOW 8x10 CLR was sent by N-EVENT-REPORT.
- Queue Stopped: The user has to react immediately. Either the camera needs immediate interaction or a job has been aborted.
  Example: A camera is out of 8x10 clear sheets, or camera is down, or a film job is aborted.

Note: different camera symbols are displayed according to the Printer Status Info.
