

Breast Biopsy: Efficient and Patient Friendly MammoTest®

Stereotactic Core Biopsy

Breast biopsy is a fast, minimally invasive procedure used to assist in diagnosing the smallest microcalcifications as well as masses and suspicious lesions.

Indications include:

- Abnormal findings on a routine screening or diagnostic mammogram

Technical and clinical benefits:

- Minimal scarring
- Reduced post-procedure pain
- Immediate return to work
- Shorter recovery time and immediate resumption of daily activities
- Patient-friendly ergonomics that allow for a more relaxed experience
