

A Siemens Biograph mCT PET/CT scanner is shown from a front-three-quarter perspective. The large, white, circular gantry is the central feature, with a patient bed extending from its center. The Siemens logo is visible on the top of the gantry and on the side of the bed. A small digital display on the top of the gantry shows a heart rate monitor and other vital signs. The background is a plain, light-colored wall.

SIEMENS

PET•CT imaging in one accurate, fast, comfortable exam

Biograph mCT

www.usa.siemens.com/mCT

Biograph mCT is a PET•CT imaging system designed to produce accurate high-resolution images with reproducible results for oncology, cardiology and neurology. You can feel confident physicians will receive the information they need to make a more informed diagnosis and create an effective treatment plan.

A fast scan means you'll spend less time in the exam, and advanced dose-reduction technologies ensure less radiation

exposure in comparison to other systems available on the market. Because of system improvements such as a wider opening and shorter tunnel, you may feel more comfortable and less claustrophobic.

Ask your physician how Biograph mCT can help provide information to improve the diagnosis and treatment of the most challenging diseases — in one fast exam.
