Radiation Dose Module

Siemens newest Radiation Dose Module—powered by Radimetrics eXposure™—is a comprehensive dose tracking system for monitoring and managing patient radiation dose exposure across modalities.

The solution provides an extensive set of features to support patient safety and regulatory reporting including:

- Cumulative Dose Tracking Scorecard – presents meaningful use of a patient's cumulative dose
- Dosimetry Worksheet – provides immediate feedback on the radiation dose delivered during examination
- Protocol Management Tools – supports multiple scanners, illustrates protocols on diagrams, tracks revisions to protocols, and customizes style sheets
- Reporting – flexible dashboards to access the data you need

Benefits include:

- Ability to track absorbed dose by organ/region
- Provide size-adjusted estimates for effective dose
- Generate alerts according to protocol-specific thresholds

When used with *syngo*® Workflow, the solution automatically captures the radiation dose information in the diagnostic report without any additional clicks or dictation, thereby saving time and reducing any additional overhead.
