Early Detection Can Save Lives¹

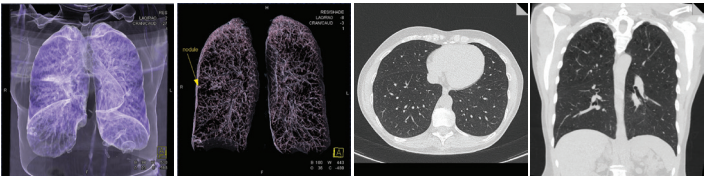

Low Dose Lung Cancer Screening
at <<Healthcare Facility>>

¹National Lung Screening Trial. Reduced Lung-Cancer Mortality with Low-Dose Computed Tomographic Screening. *N Engl J Med*;2011;395-409.

Low Dose Lung Cancer Screening Is Here

With our Siemens SOMATOM® CT scanner, <<Healthcare Facility>> is able to offer important imaging services such as low dose lung cancer screening for people 55–80 years old with a 30 pack year history of smoking, who are still smoking or who have quit within the past 15 years. Talking to your patients about lung cancer screening could be one of the most important discussions you have, because it could be an opportunity to detect cancer earlier when it is more treatable.

To refer patients to our lung cancer screening program, call us at <<Healthcare Facility Phone>>.
