1 Conformance Statement Overview

The Artis Q/Q.zen/zeego/zeego.zen is a "*syngo*®-based[a]" Imaging Modality. The Artis Q/Q.zen/zeego/zeego.zen is designed to be integrated into an environment of medical, DICOM-based devices. The Artis Q/Q.zen/zeego/zeego.zen supports Storage and Transfer of images utilizing the DICOM "Storage Service Class", the display of data and retrieval of images from DICOM Archives utilizing the DICOM "Query/Retrieve Service Class". Workflow Management is supported by querying worklists from RIS and returning information about the procedure performed. Furthermore the Import from and export to DICOM CD/DVD media is supported. Printing of viewing results is provided with Print Management Services.

3.2   Audience

This document is intended for hospital staff, health system integrators, software designers or implementers. It is assumed that the reader has a working understanding of DICOM.

3.3   Remarks

DICOM, by itself, does not guarantee interoperability. However, the Conformance Statement facilitates a first-level validation for interoperability between different applications supporting the same DICOM functionality as SCU and SCP, respectively.

This Conformance Statement is not intended to replace validation with other DICOM equipment to ensure proper exchange of information intended.

The scope of this Conformance Statement is to facilitate communication with Siemens and other vendors' medical equipment. The Conformance Statement should be read and understood in conjunction with the DICOM Standard [NEMA PS3]. However, by itself it is not guaranteed to ensure the desired interoperability and a successful interconnectivity.

The user should be aware of the following important issues:

- The comparison of conformance statements is the first step towards assessing interconnectivity between Artis Q/Q.zen/zeego/zeego.zen and other DICOM-conformant equipment.

- Test procedures should be defined and tests should be performed to validate the connectivity desired. DICOM itself and the conformance parts do not specify this.

3.4   Definitions, Terms and Abbreviations

Definitions, terms and abbreviations used in this document are defined within the different parts of the DICOM standard.

Additional Abbreviations and terms are as follows:

4 Networking

4.1 Implementation Model

- **Verification**
  The Artis Q/Q.zen/zeego/zeego.zen DICOM Service Tool application requests Verification to proof the ability of a remote DICOM application to respond to DICOM messages. Responding to Verification requests from remote nodes is handled by the Storage SCP.

- **Storage**
  The Artis Q/Q.zen/zeego/zeego.zen DICOM implementation is able to initiate associations for Storage of DICOM Composite Information Objects to Remote AEs and to receive and respond to associations for Storage from Remote AEs.

- **Storage Commitment**
  The Artis Q/Q.zen/zeego/zeego.zen DICOM implementation is able to initiate requests for Storage Commitment Push (for previously sent DICOM Composite Information Objects) to Remote AEs and is able to receive and respond to Storage Commitment requests from Remote AEs.

- **Query/Retrieve**
  The Artis Q/Q.zen/zeego/zeego.zen DICOM application supports the query/retrieve services in a SCP role. Via the user interface, Artis Q/Q.zen/zeego/zeego.zen supports Query/Retrieve as SCU to retrieve IODs to the local database.

- **Print**
  The Artis Q/Q.zen/zeego/zeego.zen DICOM implementation is able to initiate associations as Print Management SCU for printing of composed film-sheets with one or more DICOM Print AE.

- **Workflow**
  The Artis Q/Q.zen/zeego/zeego.zen will issue automated "broad" worklist queries and interactive "narrow" worklist queries as DICOM Modality Worklist SCU. The status of the procedure started and performed is communicated via MPPS, which is also supported in SCU role only. Radiation Dose information is also sent via MPPS.

4.1.1 Application Data Flow

The division of Artis Q/Q.zen/zeego/zeego.zen into the separate DICOM Application Entities represents a somewhat arbitrary partitioning of functionality. For the purpose of this document they are organized in this manner to detail their independent logical functionality.
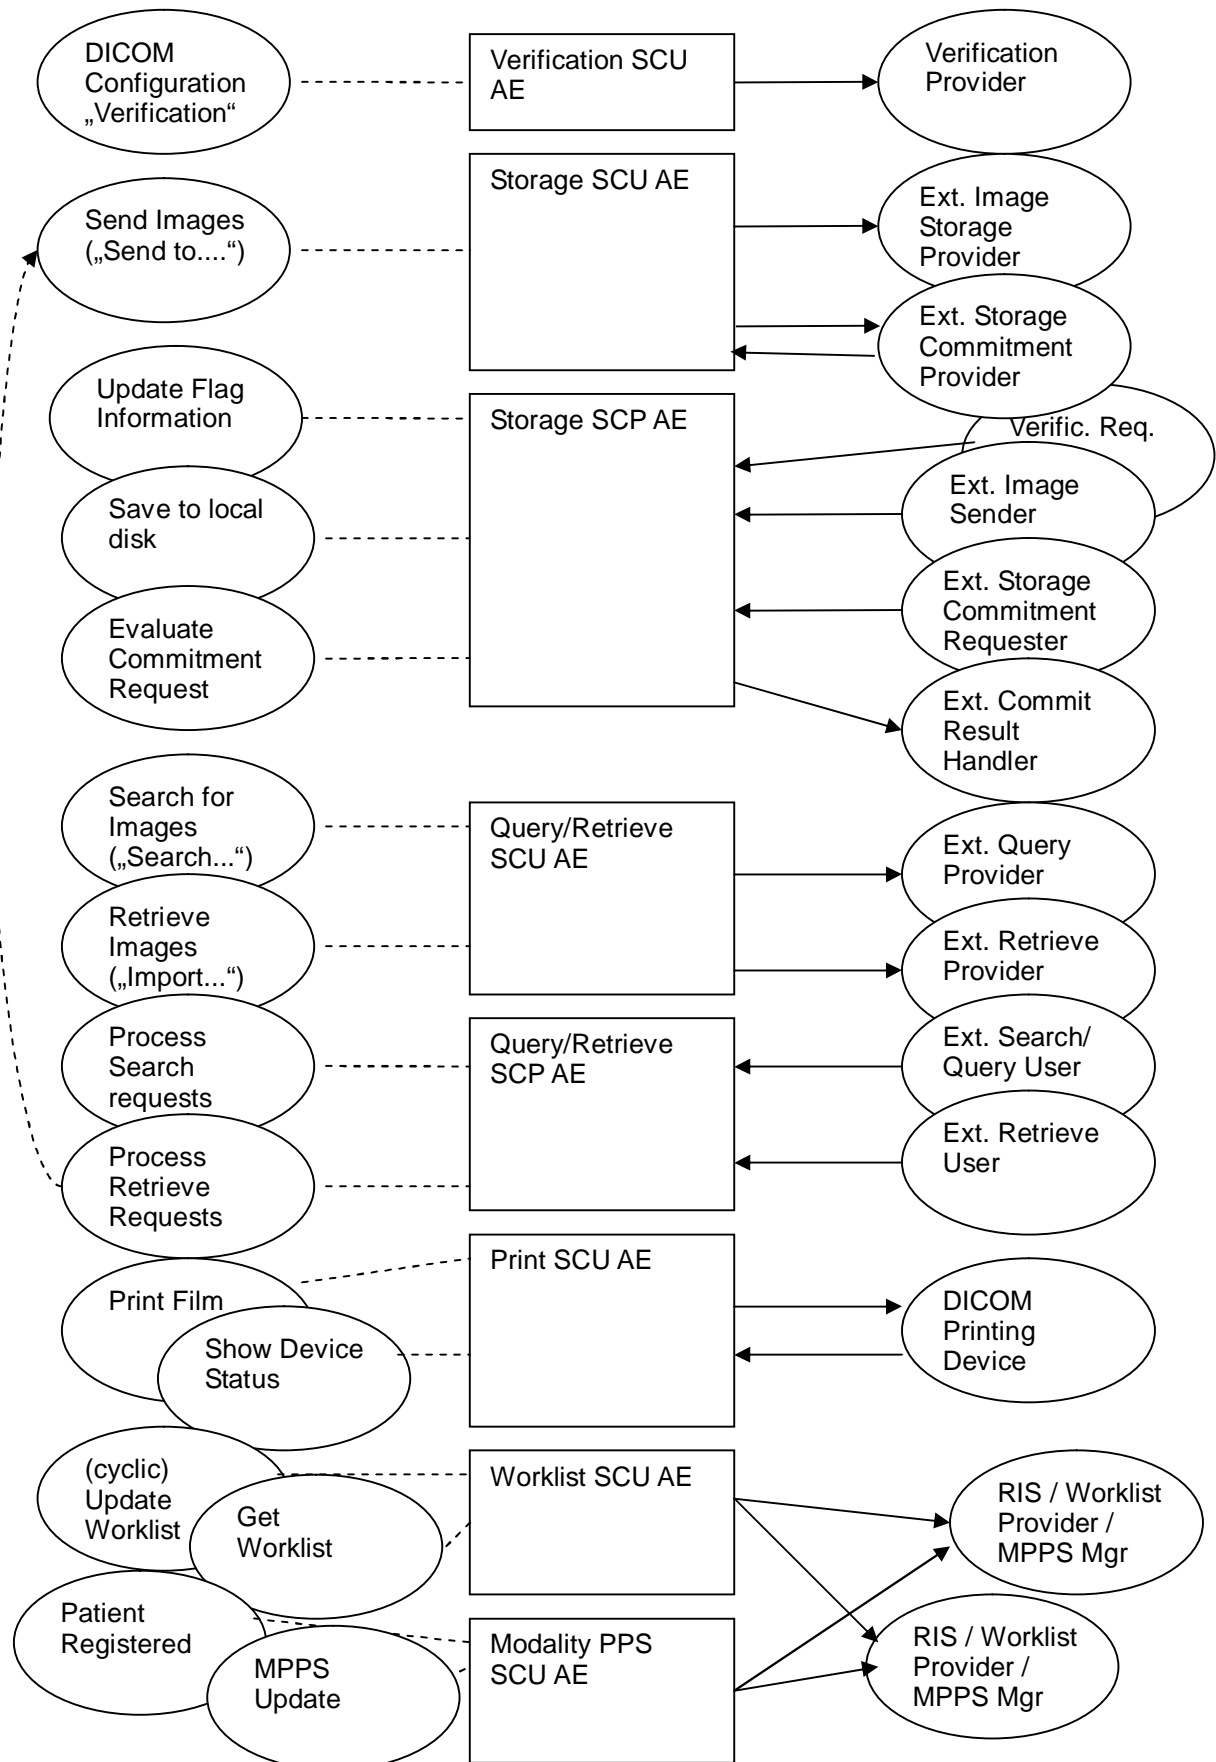

Table 5 - Artis Q/Q.zen/zeego/zeego.zen DICOM Data Flow Diagram

- The Artis Q/Q.zen/zeego/zeego.zen DICOM Service Tool application opens an association when a "verification" of a remote application is requested during a configuration session. This can be done when entering new data to configure a remote application or to verify existing configuration data.

- The Storage SCU AE can send Composite SOP Instances and automatically request Storage Commitment for sent SOP Instances, if configured.
  The Storage SCU AE also requests Storage Commitment results and handles incoming commitment status N-EVENT messages.

- The Storage SCP AE can receive incoming DICOM images and add them to the local database. It can respond to external Storage and Verification Requests as a Service Class Provider (SCP) for C-STORE and C-ECHO requests. The Storage SCP AE autonomously handles incoming Storage Commitment requests in SCP role and checks commitment status based on the local database and sends back the related commitment status in N-EVENT-REPORT messages.
  The Storage SCP AE supports Composite SOP Instances as indicated in Chapter "Conformance Statement Overview".

- The Query part of the Query/Retrieve SCU AE uses C-FIND to search a DICOM Database for Patient Study and Series information.
  The Retrieve part of the Query/Retrieve SCU AE uses C-MOVE to initiate a DICOM transfer of composite objects to the local database.

- The Query SCP AE runs autonomously in the background and responds to incoming C-FIND requests based on the matches in the local database and supports retrieve of supported SOP Instances from the local database to a known retrieve destination.

- The Print SCU sends previously compiled, complete (virtual) film-sheets in 1:1 image mode (page mode) to the printer. The printer status is cyclically monitored by sending Status requests and/or awaiting asynchronous events.

- The Worklist SCU AE runs autonomous for cyclic "broad" query and issues C-FIND Worklist model requests. It can be manually triggered for most recent data. A "broad" query with user input can be triggered separately.

- The MPPS AE uses N-CREATE when registering an Acquisition patient and updates via N-SET with each run. User can close MPPS interactively (triggers "final N-SET").

4.1.2   Functional Definitions of Application Entities

4.1.2.1   Functional Definition of Verification-SCU AE

The Artis Q/Q.zen/zeego/zeego.zen DICOM Service Tool application opens an association when a "verification" of a remote application is requested during a configuration session. This can be done when entering new data for remote application configuration or to verify existing configuration data.

4.1.2.2   Functional Definition of Storage-SCU AE

The Artis Q/Q.zen/zeego/zeego.zen Storage SCU is invoked by the job control interface that is responsible for processing network archival tasks. The job consists of data describing the composite image objects selected for storage and the destination. An association is negotiated with the destination application entity and the image data is transferred using the C-STORE DIMSE-Service. Status of the transfer is reported to the job control interface.

With each successfully completed send job, the Artis Q/Q.zen/zeego/zeego.zen DICOM Application will populate the Storage Commitment Push Model Action Information from the SOP Instances sent. Then a Storage Commit Request is triggered, if configured. Depending on configuration, the Artis Q/Q.zen/zeego/zeego.zen DICOM application will keep the association open for responses with a configurable time-out, or closes the association and expects responses on a different association that has to be establishes by the remote Storage Commitment SCP.

The commitment status derived from the related trigger response will be indicated in the related Status Flags of the related entity. It is possible to create triggers ("auto rules") from this event.

The Transaction UIDs of the pending commitment request are kept "open" (Job-status is "waiting") for a configurable time (default: 1h). If the "open time" for a pending commitment request has elapsed w/o a related response from the provider, the Transaction UID is removed and the related entities are indicated as "commit failed".

Open Transaction UIDs of pending commitment requests are discarded after a reboot of the system. The related entities are indicated as "commit failed".

4.1.2.3   Functional Definition of Storage-SCP AE

The Storage SCP component of the Artis Q/Q.zen/zeego/zeego.zen DICOM application is operating as background server process. The process starts when the machine is powered on and waits for Storage association requests. Upon accepting an association with a negotiated Presentation Context it starts to receive the Composite Image Objects and imports them to local database.

The Verification SCP is included in the Storage SCP.

The Storage Commitment SCP is running in background and is ready to receive requests when the system is started. Storage Commitment will be checked and returned against the SOP Classes received and kept in the local Storage of the Artis Q/Q.zen/zeego/zeego.zen. The response will either be sent "on same" (association not closed by requester) or "on separate" association (requester closed association consecutive to positive request status).

4.1.2.4   Functional Definition of Query/Retrieve-SCU AE

The Artis Q/Q.zen/zeego/zeego.zen DICOM query/retrieve SCU requests the remote query/retrieve SCP to perform a search and match to the keys specified in the request in order to display the results in the system's user interface. Depending on user action (Import) the Artis Q/Q.zen/zeego/zeego.zen query/retrieve DICOM SCU sends a C-MOVE DIMSE service to

initiate a C-STORE sub-operation on the SCP to start an image transfer from remote Storage SCU (running on Query/Retrieve SCP) to the system's Storage SCP.

4.1.2.5   Functional Definition of Query/Retrieve-SCP AE

The Artis Q/Q.zen/zeego/zeego.zen DICOM query/retrieve SCP responds to C-FIND DIMSE services from remote SCU applications. Depending on further remote request, a C-GET or a C-MOVE involves the system's DICOM query/retrieve SCP application to initiate a C-STORE association to send image objects to a remote Storage SCP.

All components of the DICOM query/retrieve SCP application are operating as background server processes. The processes start when the machine is powered on and then respond to queries based on the records stored in its database.

4.1.2.6   Functional Definition of Print SCU AE

The Print SCU is invoked by the user interface to setup film-sheet layout and whenever an image is ready to be printed on film. The Print SCU will hold and maintain all data needed to compile a complete film-sheet from the data (images, layout, configuration) received. Whenever a film-sheet is ready to print the related data is used to supply the Information to the SOP Classes of the Print Management Service Class. A queue is maintained, in order to intermediately store several film-sheets in case of resource problems on printer. The SCU will only supply and require the mandatory SOP Classes of the Print Management Service Class.

4.1.2.7   Functional Definition of Worklist SCU AE

The worklist SCU ("broad query") is invoked from the patient browser user interface or by timer to request the worklist from a remote Information System (Modality Worklist Class SCP). The worklist SCP responses to the C-FIND query and scheduled imaging service requests (scheduled procedure steps) and patient demographic information will be "pulled" from the information system to the Artis Q/Q.zen/zeego/zeego.zen modality. All information retrieved will be held in the scheduling database for usage during Patient registration procedure.

Furthermore, the patient based Query dialog from the patient browser allows to enter specific matching criteria ("narrow query") for the worklist query. With the response data the Patient Registration dialog can be populated according availability within the worklist response identifier.

4.1.2.8   Functional Definition of Modality PPS SCU AE

With registering a Patient (i.e. a Scheduled Procedure Step from Worklist), the Artis Q/Q.zen/zeego/zeego.zen DICOM application will create a MPPS Instance and communicate it to the MPPS Manager (SCP). It is configurable to set the states of all related MPPS to "Completed" when a patient is closed. Furthermore, a manual update can be performed with the MPPS user interface. From the user interface it is possible to set the state of the MPPS to "Completed" or "Discontinued". After that the DICOM application will no longer allow updates on the related MPPS Instance.

The Artis Q/Q.zen/zeego/zeego.zen will not only allow a "1:1 -relationship" of Scheduled Procedure Steps and Performed Procedure Steps, but also supports the "simple group-case" (grouping several SPS of the same Requested Procedure) , "complex group-case" (grouping several SPS from different Requested Procedures) and "append case" from the respective IHE-scenarios.

The Artis Q/Q.zen/zeego/zeego.zen will support creation of "unscheduled cases" by allowing MPPS Instances to be communicated for locally registered Patients.

4.1.3   Sequencing of Activities

4.1.3.1   Verification

Newly entered data have to be saved first, before a "verification" of these data is possible.

4.1.3.2   Storage

Prior to sending of SOP Instances the Artis Q/Q.zen/zeego/zeego.zen Storage application is capable of invoking processing and resizing features in order to prepare image pixel contents into convenient formats for certain multi-vendor environments.

The Storage Commitment trigger is automatically derived from the successful completion of a Send Job.

4.1.3.3   Query/Retrieve

Retrieve of images is only possible if a result from a previous "Search..." operation exists and those entities can be selected for "Import".

The Query application will not "per se" request information on IMAGE level. The user can select a series and request image level information with the "Image List" function.

4.1.3.4   Workflow

The "narrow" (interactive) Worklist Query requires that sufficient matching keys or an unique matching key are/is entered before the query is issued. Only then a single response can be expected to complete the registration dialog.

An MPPS N-CREATE message is sent when a patient is registered. For procedure steps registered as "emergency" cases the MPPS N-CREATE is withheld until it is set to completed.

MPPS N-SET messages to update the information are sent after each X-Ray event.

4.2 Application Entity Specification

4.2.1 Verification SCU AE Specification

4.2.1.1 SOP Classes

For SOP Classes supported, please refer to "Table 1 - Network Services" section "Verification" in the "Conformance Statement Overview".

4.2.1.2 Association Policies

4.2.1.2.1 General
The Artis Q/Q.zen/zeego/zeego.zen DICOM Service Tool application attempts to open an association for verification request whenever the "verification" function is activated during network configuration of a remote DICOM application.

4.2.1.2.2 Number of Associations
The Artis Q/Q.zen/zeego/zeego.zen DICOM Service Tool application initiates one association at a time to request verification.

4.2.1.2.3 Asynchronous Nature
The Artis Q/Q.zen/zeego/zeego.zen DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

4.2.1.2.4 Implementation Identifying Information
For Implementation Identifying Information please refer to "Table 3 - Implementation Identifying Information" in the "Conformance Statement Overview".

4.2.1.3 Association Initiation Policy

4.2.1.3.1 Activity – "Verification"
4.2.1.3.1.1 Description and Sequencing of Activity
The Verification SCU C-ECHO request is initiated by Service and Configuration SW whenever "Verification" is requested. If an association to a remote Application Entity is successfully established, Verification with the configured AET is requested via the open association. If the C-ECHO Response from the remote Application contains a status other than "Success" this will be indicated in the service environment and the association is closed.

4.2.1.3.1.2 Proposed Presentation Contexts
The Artis Q/Q.zen/zeego/zeego.zen DICOM application will propose Presentation Contexts as shown in the following table:

Table 6 - Presentation Context Table "Verification"

Presentation Context Table – "Verification"					
Abstract Syntax		Transfer Syntax		Role	Extended Negotiation
Name	UID	Name List	UID List		
Verification	1.2.840.10008.1.1	Explicit VR Little Endian Implicit VR Little Endian Explicit VR Big Endian	1.2.840.10008.1.2.1 1.2.840.10008.1.2 1.2.840.10008.1.2.2	SCU	None

4.2.1.3.1.3 SOP Specific Conformance – Verification SCU
The Application conforms to the definition of the Verification SCU in accordance to the DICOM Standard.

4.2.1.4   Association Acceptance Policy

The Verification SCP is part of the Storage SCP.

4.2.2   Storage SCU AE Specification

4.2.2.1   SOP Classes

For SOP Classes supported, please refer to "Table 1 - Network Services", sections "Transfer" and "Workflow Management".

4.2.2.2   Association Policies

4.2.2.2.1   General
The DICOM Storage application will be triggered by the transfer job queue or by an external retrieve request. An association request is sent to the destination AE and, upon successful negotiation of a Presentation Context, the transfer is started. Depending on configuration, processing or resizing can be applied to the images prior to being sent.

With a Send Job successfully completed, the DICOM application will generate the Storage Commitment Action Information which references to all Instances of the processed job. The Commit Request is sent over a single opened association. The Artis Q/Q.zen/zeego/zeego.zen will wait for Status responses of the Storage Commitment Request. If the Provider accepts the Storage Commitment with Success Status, the generated Transaction UID, together with study identification data and a time-stamp, is kept. Depending on configuration, the association is closed or kept open for a configured time range. If the association is closed immediately, the response is expected on a different association which is the default setting. Multiple Storage Commitment Requests can be pending.

The default PDU size used will be 512 KB.

4.2.2.2.2   Number of Associations
The Artis Q/Q.zen/zeego/zeego.zen DICOM application initiates several associations at a time, one for each destination to which a transfer request is being processed in the active job queue list.

The number of simultaneous DICOM associations can be configured via the Service-UI. The dialog can be found in "Configuration / DICOM / General".

4.2.2.2.3   Asynchronous Nature
The Artis Q/Q.zen/zeego/zeego.zen DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

4.2.2.2.4   Implementation Identifying Information
For Implementation Identifying Information please refer to "Table 3 - Implementation Identifying Information" in the "Conformance Statement Overview".

4.2.2.3   Association Initiation Policy

If a job with network destination gets active in the job list or a retrieve sub-operation is processed, the Artis Q/Q.zen/zeego/zeego.zen DICOM application attempts to initiate a new association for

- DIMSE C-STORE to send images and with successful status and
- N-ACTION DIMSE for the Storage Commitment Push Model Service Class to request commitment.

4.2.2.3.1   Activity – "Send to …"
4.2.2.3.1.1   Description and Sequencing of Activity

The C-STORE request is triggered by a job with network destination or the processing of an external C-MOVE retrieve request. If the process successfully establishes an association to a

remote Application Entity, it will transfer each image one after another via the open association. Processing features and resizing of the pixel matrix can be applied as part of the transfer. If the C-STORE Response from the remote Application contains a status other than "Success" or "Warning", the association is aborted.

With success status for the previous transfer, the Artis Q/Q.zen/zeego/zeego.zen Storage application sends the commit request (N-ACTION-RQ) message and waits for acceptance of this request (N-ACTION-RSP). After receiving this, the transaction is marked as "waiting".

Depending on a configuration value, the association will then be closed or kept open. In the first case, there is another configurable timeout giving the number of hours (h) and minutes (m) (by default 1h:0m) to wait for the corresponding commit response (N-EVENT-REPORT). In the second case, this time is the (also configurable) time-out for the association being kept open. In both cases, if the commit response (N-EVENT-REPORT) does not arrive within the configured time-out, the transaction will be marked as failed.

If the commit response (N-EVENT-REPORT) received has the status of "complete - failure exists", the transaction is marked as failed, else the transaction is marked as "completed". In both cases, a status message is shown to the user.

4.2.2.3.1.2   Proposed Presentation Contexts

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will propose Storage SCU Presentation Contexts as shown in the following table:

4.2.2.3.1.3   SOP specific Conformance - "Send to …"

The Artis Q/Q.zen/zeego/zeego.zen can send images in different formats. In a destination specific service level configuration it can be configured if images are sent original, resized (512x512 8 bit, 1024x1024 12 bit) and/or processed.

For association and DIMSE level time-outs, please refer to section Configuration (4.4.2 Parameters) of this document.

4.2.2.3.1.3.1   *Optional Attributes*
Please refer to the related Image Object definition tables in the Annex (section "Created SOP Instances") for a list of all DICOM IOD attributes of type 2 and 3, which are encoded by the Artis Q/Q.zen/zeego/zeego.zen applications.

4.2.2.3.1.3.2   *Specialized Information Object Definitions*
The DICOM images sent by Artis Q/Q.zen/zeego/zeego.zen DICOM application conform to the DICOM IOD definitions (Standard extended IODs). But they will contain additional private elements, which have to be discarded by a DICOM system when modifying the image.

The DICOM nodes are responsible for data consistency when modifying images. All unknown private attributes have to be removed upon modification!

4.2.2.3.1.3.3   *Data Dictionary of applied private IOD Attributes*
Please refer to "Standard Extended/Specialized/Private SOP Classes" in the Annex for a list of possible private IOD attributes.

4.2.2.3.1.4   SOP specific Conformance - Request Commitment

Storage Commitment is supported for all the SOP Classes detailed in Chapter "Table 1 - Network Services" section "Workflow Management".

The Referenced Study Component Sequence is not supported.

Storage Media File-Set ID and UID Attributes will not be supported in the commitment request (N-ACTION primitive) invoked by the Storage Commitment SCU.

4.2.2.4   Association Acceptance Policy

4.2.2.4.1   Activity – Update Flag Information
4.2.2.4.1.1   Description and Sequencing of Activity

After sending a Storage Commitment Request the Artis Q/Q.zen/zeego/zeego.zen either waits on the same association or, being configured to receive response on a separate association, closes the association and waits for an association request from the Storage Commitment SCP that wants to send the results.

Any incoming Notification will be checked for validity, that is, if the related Transaction UID is still part of the Pending Request Queue.

If the Notification is valid the related Instances are marked with the reported status. The over-all Commit Status of the higher Information Entities in the Artis Q/Q.zen/zeego/zeego.zen database is derived from propagation of the States of all sub-ordinate Image entities included in a study.

The Status Flags directly affected by Storage Commitment results and indicated in the different entities of the Patient Browser list can be one of

- "AC" or "SC" - Successful Commitment, "A" means archived to configured Archive destination, whereas "S" means sent to any other destination.

- ▪ "Af" of "Sf" - Commitment failed.

- ▪ "A?" or "S?" - Commitment request is sent, response is pending.

In case of failure the user has to repeat the transfer of images to the Archive destination. Another Storage Commitment will be performed after sending is completed successfully.

4.2.2.4.1.2   Accepted Presentation Context

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will accept Storage Commitment Presentation Contexts as shown in the following table:

Table 8 - Presentation Context Table "Update Flag Information"

Presentation Context Table – "Update Flag Information"				
Abstract Syntax	Transfer Syntax

4.2.2.4.1.3   SOP specific Conformance

If the Commitment response (N-EVENT-REPORT) received has the status of "complete - failure exists", the transaction is marked as failed, else the transaction is marked as "completed". In both cases, a message is shown to the user.

The related status flags are set for the committed images in the local database.

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will not support the Storage Media File Set ID attributes.

4.2.3   Storage SCP AE Specification

4.2.3.1   SOP Classes

For SOP Classes supported, please refer to "Table 1 - Network Services" Sections "Transfer" on page 2.

4.2.3.2   Association Policies

4.2.3.2.1   General

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will accept any number of verification or storage SOP classes that are referred to above. There is no limit on the number of presentation contexts accepted except for the DICOM limit. In the event that the Siemens DICOM application runs out of resources, it will reject the association request.

When "trusted host functionality" is enabled Artis Q/Q.zen/zeego/zeego.zen will only accept Associations from known hosts with a known AET. Hosts and AETs have to be entered in "Local Service" by a Siemens CSE.

The default PDU size used will be 512 KB.

4.2.3.2.2   Number of Associations

The Siemens Artis Q/Q.zen/zeego/zeego.zen DICOM application is able to accept multiple associations at a time. It can handle up to 10 associations in parallel.

The number of simultaneous DICOM associations can be configured via the Service-UI. The dialog can be found in "Configuration / DICOM / General".

4.2.3.2.3   Asynchronous Nature

The Artis Q/Q.zen/zeego/zeego.zen DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

4.2.3.2.4   Implementation Identifying Information

For Implementation Identifying Information please refer to "Table 3 - Implementation Identifying Information" in the "Conformance Statement Overview".

4.2.3.3   Association Initiation Policy

If the result from a previously accepted Storage Commitment request is evaluated, the Artis Q/Q.zen/zeego/zeego.zen DICOM application attempts to initiate a new association for

- DIMSE N-EVENT-REPORT for sending commitment result from a previous request.

4.2.3.3.1   Activity - Return commitment result

When Artis Q/Q.zen/zeego/zeego.zen Storage SCP AE received a Storage Commitment request it tries to send the response back on the same association. When the association is not open anymore it will initiate an association to send the storage commitment response (N-EVENT-REPORT) to the SCU.

4.2.3.3.1.1 Proposed Presentation Context

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will propose Storage SCP Presentation Contexts for returning Storage Commitment results as shown in the following table:

Table 9 - Presentation Context Table "Return Commitment Result"

Presentation Context Table – "Return Commitment Result"				
Abstract Syntax	Transfer Syntax		Role	Ext. Neg.
Description	Name List	UID List		
Storage Commitment SOP Class as detailed in "Table 1 - Network Services" section "Workflow Management".	Explicit VR Little Endian Explicit VR Big Endian Implicit VR Little Endian	1.2.840.10008.1.2.1 1.2.840.10008.1.2.2 1.2.840.10008.1.2	SCP	None

4.2.3.3.1.2 SOP Specific Conformance

Storage Media File-Set ID and UID Attributes will not be supported in the N-EVENT-REPORT primitive invoked by the Storage SCP.

4.2.3.4 Association Acceptance Policy

The Artis Q/Q.zen/zeego/zeego.zen DICOM application attempts to accept a new association for

- DIMSE C-ECHO for incoming Verification requests
- DIMSE C-STORE for external image senders request storage of instances
- DIMSE N-ACTION for external systems requesting storage commitment
- DIMSE N-EVENT-REPORT for receiving commitment result from a previous request

4.2.3.4.1 Activity – Save to local disk

4.2.3.4.1.1 Description and Sequencing of Activity

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will accept an association and will receive SOP Instances according to the listed presentation contexts on that association and will store the images to the local hard disk if the conformance check is performed successfully.

Upon successful receiving a C-STORE-RQ, the Artis Q/Q.zen/zeego/zeego.zen DICOM receiver performs a plausibility test on the received image and available system resources. If this test succeeds, it returns the Status SUCCESS, otherwise one of the following status codes is returned and the association is aborted:

Table 10 - Status codes "Save to local disk"

Code	Meaning
A700	Refused: This error status indicates a lack of Resources (e.g. not enough disk space) on the Artis Q/Q.zen/zeego/zeego.zen modality.
A900	Invalid Dataset: An error occurred while processing the image, which makes it impossible to proceed. The image will not be stored and the association is aborted.
0110	Processing Error: An error occurred while processing the image, which makes it impossible to proceed. Association is aborted.

Note: The image will be saved after sending the response. If during this operation an error occurs, the association will be aborted. This implies that a C-STORE-RSP with status SUCCESS does not mean that the image was successfully stored into the database.

4.2.3.4.1.2   Accepted Presentation Context

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will accept Presentation Contexts as shown in the following table:

Table 11 - Presentation Context Table "Save to local disk"

Presentation Context Table – "Save to local disk"				
Abstract Syntax	Transfer Syntax		Role	Ext. Neg.

4.2.3.4.1.3   SOP specific Conformance

The Artis Q/Q.zen/zeego/zeego.zen application conforms to the Full Storage Service Class at Level 2.

Any Explicit VR Transfer Syntax is preferred to be used by the Storage SCU when sending Composite Image Instances to the Artis Q/Q.zen/zeego/zeego.zen DICOM application.

If an image instance is received that is identified by a SOP Instance UID which is already used by an Instance stored in database then the actual received image will be discarded. The existing Instance is not superseded.

The order of preference in accepting Transfer Syntaxes within Presentation Contexts or Presentation Contexts with single Transfer Syntaxes is:

Table 12 - Order of Preference Transfer Syntax

Order	DICOM Transfer Syntax
1	JPEG Lossy Extended
2	JPEG Lossless Non-hierarchical
3	JPEG Lossy Baseline
4	RLE Lossless
5	Explicit VR Little Endian
6	Implicit VR Little Endian

Artis Q/Q.zen/zeego/zeego.zen DICOM application will decompress the image before storing it into the database.

The following sections will differentiate the attribute contents required for Image Viewing. The Artis Q/Q.zen/zeego/zeego.zen DICOM application supports more formats for Storage of Images than for Viewing.

The Artis Q/Q.zen/zeego/zeego.zen viewer supports only XA-Images for display. Only a number of pixel columns with a multiple of 4 is supported for display in the viewer.

Image Pixel Attribute Acceptance Criterion for Grayscale Images

The Artis Q/Q.zen/zeego/zeego.zen Viewing application accepts MONOCHROME2 photometric interpretation pixel format and graphic overlay with unsigned integer and 8 or 16 bits allocated. Accepted values:

Pixel plane

- Samples per Pixel (attribute 0028,0002) = 1
- Photometric Interpretation (attribute 0028,0004) = "MONOCHROME2"
- Only Aspect Ratio 1:1 is supported
- Pixel Representation (attribute 0028,0103) = 0
- Bits Allocated (attribute 0028,0100) = 8, 16
- Bits Stored (attribute 0028,0101) = 8, 10, 12
- High Bit (attribute 0028,0102) = 7, 9, 11
- Rows/Columns = 512, 1024 and all formats internally generated.

Overlay plane "embedded"

- Overlay Type (attribute 60xx,0040) = "G"
- Bits Allocated (attribute 60xx,0100) = 16
- Bit Position (attribute 60xx,0102) = 12, 13, 14, 15

Graphic Overlay will be shifted to fill Overlay Planes from Bit 12 and consecutive.

Overlay plane "explicit"

- Overlay Type (attribute 60xx,0040) = "G"
- Bits Allocated (attribute 60xx,0100) = 1
- Bit Position (attribute 60xx,0102) = 0
- Overlay Data (attribute 60xx,3000) = supported

For Modality LUT, both the linear LUT (Rescale Slope/Intercept) and the Modality LUT Sequence are supported and considered when pixel data is displayed. However there are two limitations. The Modality LUT Sequence will be ignored in the following cases:

- 8-Bit signed pixels
- the pixel format is changed by the Modality LUT (e.g. 8bit -> 16bit)

If the Modality LUT Sequence contains multiple LUTs, then only the first one is used.

For VOI LUT, both the linear LUT (Window Center/Width) and the VOI LUT Sequence are supported (VOI LUT Sequence with 8 or 16 bit LUT data)

But if both, a VOI LUT Sequence and a linear Modality LUT, are specified within one image, then the value for Rescale Slope is restricted to 1.

If the VOI LUT Sequence contains multiple LUTs, then only the first one is used by default. The other VOI LUTs are selectable.

4.2.3.4.2 Activity – Evaluate Commit Request

4.2.3.4.2.1 Description and Sequencing of Activity

When receiving a Storage Commitment request the Artis Q/Q.zen/zeego/zeego.zen DICOM application will perform the necessary steps to check the received list Instances against the local database.

4.2.3.4.2.2 Accepted Presentation Context

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will accept Storage Commitment Presentation Contexts as shown in the following table:

Table 13 - Presentation Context Table "Evaluate Commit Request"

Presentation Context Table – "Evaluate Commit Request"				
Abstract Syntax	Transfer Syntax		Role	Ext. Neg.
Description	Name List	UID List		
Storage Commitment SOP Class detailed in "Table 1 - Network Services" section "Workflow Management".	Explicit VR Little Endian Explicit VR Big Endian Implicit VR Little Endian	1.2.840.10008.1.2.1 1.2.840.10008.1.2.2 1.2.840.10008.1.2	SCP	None

4.2.3.4.2.3 SOP specific Conformance

The Artis Q/Q.zen/zeego/zeego.zen Storage SCP AE will return success for images that are stored in the local database and failure for images that are not. However, the committed images can later be deleted by the user at the Artis Q/Q.zen/zeego/zeego.zen without notice!

Note: Storage Media File-Set ID and UID Attributes will not be supported in the N-EVENT-REPORT primitive invoked by the Storage Commitment SCP.

4.2.4 Query/Retrieve SCU Specification

4.2.4.1 SOP Classes

For SOP Classes supported, please refer to "Table 1 - Network Services" section „Query/Retrieve" in the "Conformance Statement Overview".

4.2.4.2 Association Policies

4.2.4.2.1 General

With the "Search..." function the query data can be entered and the DICOM query/retrieve application is initiated. An initial query request will be sent out to one remote node that can be selected from a list of configured Query Providers. Depending on the replies to the initial request, sub-sequent query requests are issued to gather further data for lower information level entities. The results compiled from the response data will be displayed to the user. Upon request (Import), the retrieval of selected items is initiated.

The default PDU size used will be 512 KB.

4.2.4.2.2 Number of Associations

The Artis Q/Q.zen/zeego/zeego.zen DICOM application initiates several associations at a time.

For Query it initiates a new association to the remote node and issues the C-FIND request to retrieve all the requested patient and study information matching the search criteria. The Artis Q/Q.zen/zeego/zeego.zen initiates in parallel a second association to the destination node to query for all the series information for each study's information returned on the first association.

For the Retrieve request (C-MOVE) only one association is initiated per destination.

4.2.4.2.3 Asynchronous Nature

The Artis Q/Q.zen/zeego/zeego.zen DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

4.2.4.2.4 Implementation Identifying Information

For Implementation Identifying Information please refer to "Table 3 - Implementation Identifying Information" in the "Conformance Statement Overview".

4.2.4.3 Association Initiation Policy

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will request associations for the following DIMSE-C operations as SCU:

Table 14 - Supported DIMSE-C Operations - Query/Retrieve SCU

Supported DIMSE operations	Cancel Request supported
C-FIND	yes
C-MOVE	n. a.

Extended negotiation (relational query) is not supported for the above listed services.

4.2.4.3.1 Activity – Search for images (Search…)

4.2.4.3.1.1 Description and Sequencing of Activity

The associated activity is to fill out a query form with search data and pass it as query to the network application which issues a C-FIND over a previously built association. The remote SCP

will respond with related data-entries that will be passed to a browser application. If needed, further associations are opened for querying data from sub-sequent entities. When data transfer is finished, each association is closed.

If the C-FIND Response from the remote Application contains an error status, the association is aborted.

4.2.4.3.1.2   Proposed Presentation Contexts

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will propose Presentation Contexts as shown in the following table:

Table 15 - Presentation Context Table "Search..."

Presentation Context Table - "Search…"					
Abstract Syntax		Transfer Syntax		Role	Ext. Neg.

Patient Root Query/Retrieve Model - FIND	1.2.840.10008.5.1.4.1.2.1.1	Implicit VR Little Endian Explicit VR Big Endian Explicit VR Little Endian	1.2.840.10008.1.2 1.2.840.10008.1.2.2 1.2.840.10008.1.2.1	SCU	None

Within the DICOM network configuration it is configurable which of the two query models (or both) are to be used by the Artis Q/Q.zen/zeego/zeego.zen DICOM Query SCU application for each node. If both Abstract Syntaxes are configured, the Find SCU will use the Patient Root Model only for
C-FIND requests on PATIENT level. For all other levels it will use the Study Root model.

4.2.4.3.1.3   SOP Specific Conformance

The Artis Q/Q.zen/zeego/zeego.zen DICOM Query/Retrieve SCU supports hierarchical queries with all mandatory search keys. The interactive querying of attributes on IMAGE level is not supported by the Query SCU, hence retrieval of individual Objects is possible. The following table describes the search keys for the different query models that the SCU supports. Matching is either wildcard, which means that the user can supply a string containing wildcards, or universal, which means that the attribute is requested as return value.

Table 16 - C-FIND RQ Search Keys

The Artis Q/Q.zen/zeego/zeego.zen Search application supports a

▪ DIMSE C-FIND-CANCEL

if the user wishes to cancel a running Query request via the Artis Q/Q.zen/zeego/zeego.zen user interface ("Cancel" button while a "Search…" is active).

The Find SCU interprets following status codes:

Table 17 - Status Codes "Search..."

Service Status	Meaning	Error Codes	Related Fields
Refused	Out of Resources	A700	(0000,0902)
Failed	Identifier does not match SOP Class	A900	(0000,0901) (0000,0902)

4.2.4.3.2 Activity – Retrieve Images (Import…)
4.2.4.3.2.1 Description and Sequencing of Activity

When selecting a data entry in the Query UI and activating the "Import" function, a retrieval request is passed to the Artis Q/Q.zen/zeego/zeego.zen DICOM application which issues a C-MOVE service according to the Patient Root or Study Root query model. (The Storage Service Class Conformance Statement describes the C-STORE service, which is generated by processing the C-MOVE service.)

The received image data are processed as described in the storage class SCP descriptions.

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will always insert the own Storage SCP AE as "Move Destination".

4.2.4.3.2.2 Proposed Presentation Contexts

The Artis Q/Q.zen/zeego/zeego.zen Server DICOM application will propose Presentation Contexts as shown in the following table:

Table 18 - Presentation Context Table "Import..."

Note: C-MOVE Extended Negotiation will be not supported by the SCU.

4.2.4.3.2.3 SOP Specific Conformance

All required keys will be provided in the retrieve request identifier, as defined in DICOM Standard.

The Move SCU interprets following status codes:

Table 19 - C-MOVE RSP Status Codes

4.2.4.4 Association Acceptance Policy

See next section "Query/Retrieve SCP AE Specification".

4.2.5   Query/Retrieve SCP Specification

4.2.5.1   SOP Classes

For SOP Classes supported, please refer to "Table 1 - Network Services" section "Query/Retrieve" in the "Conformance Statement Overview".

4.2.5.2   Association Policies

4.2.5.2.1   General

When "trusted host" functionality is enabled Artis Q/Q.zen/zeego/zeego.zen will only accept Associations from known hosts with a known AET. Hosts and AETs have to be entered in "Local Service" by a Siemens CSE.

The default PDU size used will be 512 KB.

4.2.5.2.2   Number of Associations

The Siemens Artis Q/Q.zen/zeego/zeego.zen DICOM application is able to accept multiple associations at a time. It can handle up to 10 associations in parallel.

The number of simultaneous DICOM associations can be configured via the Service-UI. The dialog can be found in "Configuration / DICOM / General".

4.2.5.2.3   Asynchronous Nature

The Artis Q/Q.zen/zeego/zeego.zen DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

4.2.5.2.4   Implementation Identifying Information

For Implementation Identifying Information please refer to "Table 3 - Implementation Identifying Information".

4.2.5.3   Association Initiation Policy

See previous section "Query/Retrieve SCU AE Specification".

4.2.5.4   Association Acceptance Policy

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will accept associations for the following DIMSE-C operations as SCP:

- C-FIND
- C-GET
- C-MOVE
- C-FIND-CANCEL
- C-GET-CANCEL
- C-MOVE-CANCEL

Extended negotiation - which is relational query or retrieve - is not supported for the above listed services. The Artis Q/Q.zen/zeego/zeego.zen DICOM application does support multiple C-FIND requests over the same association, while multiple C-MOVE or C-GET operations are not supported over the same association.

4.2.5.4.1 Activity - Process Search Requests

4.2.5.4.1.1 Description and Sequencing of Activity

The Query SCP AE will respond to incoming query requests from a SCU with the query model Patient Root, Study Root and Patient/Study Only. Relational retrieve operation is not supported. The content records of the local database are used to match the incoming query keys and fill the related return keys. With a C-FIND-CANCEL request the running query can be canceled at any time.

Multiple C-FIND requests over the same association are supported.

4.2.5.4.1.2 Accepted Presentation Contexts

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will accept Presentation Contexts as shown in the following table:

Table 20 - Presentation Context Table "Process Search Requests"

Presentation Context Table

Note: C-FIND Extended Negotiation will not be supported.

The order of preference for accepting Transfer Syntaxes is: 1. Explicit VR Little Endian, 2. Explicit VR Big Endian, 3. Implicit VR Little Endian.

4.2.5.4.1.3 SOP Specific Conformance

The Artis Q/Q.zen/zeego/zeego.zen DICOM Query/Retrieve SCP supports hierarchical queries for all mandatory and optional search keys.

The syntactical component structure of the attribute (0010,0010) Patient's Name is defined as follows (see [DICOM], Part 5, Definition of PN, Person Name):

<single byte group> =<ideographic group>=<phonetic group>

The Query/Retrieve SCP replies to queries for "Patient's Name" as follows:

1. Matching of Patient's Name attribute (0010, 0010) is done case-insensitive.

2. If a search string matches the complete value of a Patient's Name in the database, a match will be returned.

3. If a search string matches an individual group (single byte, ideographic or phonetic) of a Patient's Name in the database, a match will be returned.

4. If a search string matches two consecutive groups of a data base object's Patient's Name, a match will be returned.

5. Redundant group separators "=" or component separators "^" are treated as insignificant for matching.

6. Leading and trailing blanks within a component or a group of Patient's Name are treated as insignificant for matching.

Except for attribute Patient's Name (0010,0010) any queries for text string attributes will be treated case-sensitive.

The Find SCP will not differentiate "?" and "*", thus "?abc*" will be treated as "*abc*".

If the value for the patient-level unique key "Patient ID" is not known, it will be returned with zero length. The attribute "Image Comments" will not be included in the C-FIND-RSP, if it is not set in the DB, even if it was requested as return key in the related C-FIND-RQ.

Usage of Storage Media File-Set ID, Retrieve AE Title with C-FIND-RSP message:

▪ The Storage Media File-Set ID - if available - can be returned at Study/Series/Image Level. Only on Image Level, the values of ONLINE, NEARLINE or OFFLINE are returned to indicate the Storage Location of the related Instance.

▪ The Retrieve AE Title - if available - can only be returned at Image Level (for Patient Root and Study Root models) or Study Level (for Patient/Study Only model).

Relational Queries are not supported.

A remote DICOM AE can cancel the running query by sending a C-FIND-CANCEL. Matches are possibly continuing (more C-FIND response with status PENDING) until the cancel operation takes effect and query matching has completed.

The supported attributes on the various query levels of the three supported information models are listed in the following table.

4.2.5.4.2 Activity - Process Retrieve Requests

4.2.5.4.2.1   Description and Sequencing of Activity

The associated activity is to respond to retrieve requests initiated from a foreign SCU. Relational retrieve operation is not supported.

Multiple C-GET or C-MOVE requests over the same association are not supported.

4.2.5.4.2.1   Accepted Presentation Contexts

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will accept Presentation Contexts as shown in the following table:

The order of preference for accepting Transfer Syntaxes is: 1. Explicit VR Little Endian, 2. Explicit VR Big Endian, 3. Implicit VR Little Endian.

4.2.5.4.2.2   SOP Specific Conformance

Relational retrieve operation is not supported.

All unique keys have to be supplied according to the selected Query/Retrieve Level. The related tables in the C-FIND SCP section will give information about "U" marked key attributes.

The C-STORE can only be performed to AEs that are configured in the Artis Q/Q.zen/zeego/zeego.zen.

The "Process Retrieve Requests" activity can return the following status codes:

4.2.6 Print SCU Specification

4.2.6.1 SOP Classes

For SOP Classes supported, please refer to "Table 1 - Network Services" section "Print Management" in the "Conformance Statement Overview".

4.2.6.2 Association Policies

4.2.6.2.1 General

Whenever a film-sheet is completely set up and printed by command or automated rule, the job is prepared for processing. As soon as the queue is ready to process the job, it is activated and worked according to the processing data. The Print application will initiate an association to the print destination and process the printing.

The default PDU size used will be 512 KB.

4.2.6.2.2 Number of Associations

The Artis Q/Q.zen/zeego/zeego.zen DICOM application initiates one association at a time for each different print device configured.

4.2.6.2.3 Asynchronous Nature

The Artis Q/Q.zen/zeego/zeego.zen DICOM print application does not support asynchronous communication (multiple outstanding transactions over a single association).

4.2.6.2.4 Implementation Identifying Information

For Implementation Identifying Information please refer to "Table 3 - Implementation Identifying Information" in the "Conformance Statement Overview".

4.2.6.3 Association Initiation Policy

Triggered by the Print job queue the Print Management SCU establishes an association by using the DICOM association services. An N-GET request determines the printer status prior to printing. If the printer status is "normal", the print job is started.

After the last film is printed from queue, the Print application will leave open the association for another 60 seconds. If a new film job is ready for printing within this time-limit, the job will be immediately processed over the still open association. If there is no new job, the association is closed.

During the "idle-time" (no open association to printer) the Print application will issue a cyclic camera status request (using N-GET of the Printer SOP Class) every 5 minutes.

4.2.6.3.1 Activity - Print Film

4.2.6.3.1.1   Description and Sequencing of Activity

The film sheet is internally processed, converted to a Standard/1-1 page and then the page image is sent. Status is controlled by awaiting any N-EVENT message through the transfer until the last image or film-sheet is sent.

If the response from the remote application contains a status other than Success or Warning the association is aborted.

4.2.6.3.1.2   Proposed Presentation Context

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will propose Presentation Contexts as shown in the following table:

4.2.6.3.1.3   SOP Specific Conformance

The Artis Q/Q.zen/zeego/zeego.zen DICOM print management SCU conforms to the DICOM Basic Grayscale Print Management Meta SOP Class.

The application uses a setting platform to define the properties of the connected DICOM SCP, e.g.:

- maximum number of print jobs in the queue

- maximum number of print copies

- supported film sizes of the connected DICOM SCP

- supported film formats of the DICOM SCP

- lookup table definition.

The printing is only suspended in the case of a failure return status of the SCP.

Basic Film Session SOP Class

The Basic Film Session information object definition describes all the user-defined parameters, which are common for all the films of a film session. The Basic Film Session refers to one or more Basic Film Boxes that are printed on one hardcopy printer.

The Artis Q/Q.zen/zeego/zeego.zen DICOM print management SCU supports the following DIMSE Service elements for the Basic Film Session SOP Class as SCU:

- N-CREATE

- N-DELETE

The Basic Film Session SOP Class N-CREATE-RQ (SCU) uses the following attributes:

Table 26 - Basic Film Session N-CREATE attributes

Attribute Name	Tag	Usage SCU	Supported Values
Number of Copies	(2000,0010)	U	"1"
Medium Type	(2000,0030)	U	BLUE FILM CLEAR FILM PAPER
Film Destination	(2000,0040)	U	MAGAZINE PROCESSOR

U = User Option

The number of copies sent to the DICOM Printer is always 1, the job is sent n times for n copies.

The affected SOP Instance UID received with N-CREATE-RSP message will be kept internally and used for later requests (e.g. N-DELETE-RQ) on the Basic Film Session – see below:

Table 27 - Affected SOP Instance UID

Attribute Name	Tag	Source of Information
Requested SOP Instance UID	(0000,1000) → (0000,1001)	Affected SOP Instance UID of N-CREATE-RSP on Basic Film Session

The N-DELETE-RQ on the Basic Film Session SOP Class is used to remove the complete Basic Film Session SOP Instance hierarchy.

The Basic Film Session SOP Class interprets the following status codes (from N-CREATE-RSP, N-DELETE-RSP messages):

Table 28 - Basic Film Session Status Codes

Service Status	Meaning	Error Codes
Failure	Film session SOP instances hierarchy does not contain film box SOP instances	C600
	Unable to create print job, print queue is full	C601
	Image size is larger than images box size	C603
Warning	Memory allocation not supported	B600
	Film session printing is not supported	B601
	Film box does not contain image box (empty page)	B602
Success	Film belonging to the film session are accepted for printing	0000

Basic Film Box SOP Class

The Basic Film Box information object definition describes all the user-defined parameter of one film of the film session. The Basic Film Box information description defines the presentation parameters, which are common for all images on a given sheet of film.

The Basic Film Box refers to one or more Image Boxes.

Supported Service Elements as SCU are:

- N-CREATE

- N-ACTION

- N-DELETE

The Basic Film Box SOP Class N-CREATE-RQ message uses the following attributes (the actual values for each attribute depend on DICOM printer configuration within the Artis Q/Q.zen/zeego/zeego.zen DICOM print management SCU):

Table 29 - Basic Film Box N-CREATE attributes

M = Mandatory, **U** = User Option

The N-CREATE-RSP message from the Print SCP includes the Referenced Image Box Sequence with SOP Class/Instance UID pairs which will be kept internally and used for the subsequent Basic Image Box SOP Class N-SET-RQ messages.

When all Image Boxes (including parameters) for the film-sheet have been set, the DICOM print manager will issue a N-ACTION-RQ message with the SOP Instance UID of the Basic Film Box and the Action Type ID of 1.

The affected SOP Instance UID received with N-CREATE-RSP message will be kept internally and used for later requests (e.g. N-DELETE-RQ) on the Basic Film Box - see below:

Table 30 - Affected SOP Instance UID

Attribute Name	Tag	Source of Information
Requested SOP Instance UID	(0000,1000) → (0000,1001)	Affected SOP Instance UID of N-CREATE-RSP on Basic Film Box

The Basic Film Box SOP Class interprets the following status codes:

Table 31 - Basic Film Box Status Codes

Service Status	Meaning	Error Codes
Failure	Unable to create print job, print queue is full	C601

Basic Grayscale Image Box SOP Class

The Basic Grayscale Image Box information object definition is the presentation of an image and image related data in the image area of a film. The Basic Grayscale Image Box information describes the presentation parameters and image pixel data, which apply to a single image of a sheet of film.

The Grayscale Image Box SOP Class uses only the N-SET-RQ with the following attributes:

Table 32 - Basic Grayscale Image Box N-SET attributes

Attribute Name	Tag	Usage SCU	Supported Values
Image Position	(2020,0010)	M	1

The Grayscale Image Box SOP Class interpret the following status codes:

Table 33 - Basic Grayscale Image Box Status Codes

Service Status	Meaning	Error Codes
Failure	Image contains more pixel than printer can print in Image Box	C603
	Insufficient memory in printer to store the image	C605

Success		0000

Presentation LUT SOP Class

The Presentation LUT tailors image hardcopy printing for specific modalities, applications and user preferences.

The output of the Presentation LUT is Presentation Values (P-Values). P-Values are approximately related to human perceptual response. They are intended to facilitate common input for hardcopy. P-Values are intended to be independent of the specific class or characteristics of the hardcopy device.

The Presentation LUT SOP Class uses only the N-CREATE-RQ with the following attributes:

Table 34 - Presentation LUT N-CREATE attribute

Attribute Name	Tag	Usage SCU	Supported Values
Presentation LUT Shape	(2050,0020)	U	IDENTITY

U = User Option

The affected SOP Instance UID received with N-CREATE-RSP message will be kept internally and is used for later requests on the Basic Film Box (N-CREATE-RQ) and on the Presentation LUT (N-DELETE-RQ) - see below:

Table 35 - Affected SOP Instance UID

Attribute Name	Tag	Source of Information
Requested SOP Instance UID	(0000,1000) → (0000,1001)	Affected SOP Instance UID of N-CREATE-RSP on Presentation LUT

The Presentation LUT SOP Class interprets the following status codes:

Table 36 - Presentation LUT Status Codes

Service Status	Meaning	Codes
Success	Presentation LUT successfully created	0000
Warning	Requested MinDensity or MaxDensity outside of printer's operating range. The printer will use its respective minimum or maximum density value instead.	B605

Printer SOP Class

The Printer SOP Class allows to monitor the status of the hardcopy printer in a synchronous and an asynchronous way.

The SCU uses the mandatory N-EVENT Report DIMSE service to monitor the changes of the printer status in an asynchronous way.

The following returned information is supported:

Table 37 - Used Printer N-EVENT Report attributes

Event-type Name	Event	Attributes	Tag	Usage SCU

Note: For a detailed description on how Artis Q/Q.zen/zeego/zeego.zen reacts on different printer status messages, please refer to the Annex section "DICOM Print SCU - detailed status displays".

Printer Job SOP Class

The Print Job SOP Class allows to monitor the execution of the print process.

The Artis Q/Q.zen/zeego/zeego.zen DICOM Print Management application supports the optional N-EVENT-REPORT DIMSE Service to receive the changes of the Print Job Status in an asynchronous way.

It can receive Events from the Print SCP asynchronously:

▪ N-EVENT-REPORT

Note: The underlying *syngo* DICOM Print AE does not support receiving of N-EVENT-REPORT messages from camera during open print sessions. This is typically configurable in the camera setup.

The following information is supported:

4.2.6.3.2 Activity - Show Device Status

4.2.6.3.2.1 Description and Sequencing of Activity

With no printing activity ongoing ("idle time"), the Artis Q/Q.zen/zeego/zeego.zen DICOM Print SCU application will cyclically request the printer status to update the related printer state in the Printing UI.

4.2.6.3.2.2 Proposed Presentation Context

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will propose Presentation Contexts as shown in the following table:

Table 40 - Presentation Context Table "Show Device Status"

4.2.6.3.2.3 SOP Specific Conformance

The Printer SOP Class allows to monitor the status of the hardcopy printer in a synchronous and an asynchronous way.

The Print SCU AE application will cyclically "ask" the Printer (SCP) for its status synchronously:

- N-GET as SCU

The following information is supported:

Table 41 - Used Printer N-EVENT Report attributes

Event-type Name	Event	Attributes	Tag	Usage SCU

4.2.6.4 Association Acceptance Policy

n. a.

4.2.7   Worklist SCU AE

4.2.7.1   SOP Classes

For SOP Classes supported, please refer to "Table 1 - Network Services" section „Workflow Management" in the "Conformance Statement Overview".

4.2.7.2   Association Policies

4.2.7.2.1   General

It is possible to configure a cyclic update of the modality Scheduler DB through a background worklist request with date/time and modality information.

In addition, the user can request worklist update with "Update Worklist". No duplicate entries will be added in the Scheduler DB. Entries are uniquely identified by the Study Instance UID (0020,000D) for the Requested Procedure and the SPS ID (0040,009) in the SPS Sequence (0040,0100).

An interactive worklist query can be issued with search criteria entered in the patient based Query dialog from the patient browser..

The default PDU size used will be 512 KB.

4.2.7.2.2   Number of Associations
The Artis Q/Q.zen/zeego/zeego.zen DICOM application initiates one association at a time to query worklist entry data.

4.2.7.2.3   Asynchronous Nature
The Artis Q/Q.zen/zeego/zeego.zen DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

4.2.7.2.4   Implementation Identifying Information
For Implementation Identifying Information please refer to "Table 3 - Implementation Identifying Information" in the "Conformance Statement Overview".

4.2.7.3   Association Initiation Policy

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will cyclically query the worklist provider and by request from the patient registration interface. It establishes an association by using the

- C-FIND with Worklist information model

It is possible to configure multiple worklist providers but only one can be active at a time. The active worklist provider can be selected in the user settings.

4.2.7.3.1   Activity - (cyclic) Update Worklist
4.2.7.3.1.1   Description and Sequencing of Activity

A network application will perform worklist queries with the C-FIND request at regular intervals. In addition it can be triggered by immediate request. The received worklist items will be compared with the contents of the local Scheduler DB. New items will be inserted into Scheduler DB.

After each broad-query, all Requested Procedures / Scheduled Procedure Steps that were canceled or rescheduled to another modality at the RIS will be automatically removed from the Scheduler DB if :

1. the Examination of this procedure has not been started or finished yet, and
2. the corresponding configuration item "Automatic removal of canceled/rescheduled Request" was checked in the Service UI under DICOM/HIS-RIS Node.

No automatic clean-up of the Scheduler DB is performed after a Patient-based Query since the worklist received - due to restricted search criteria - does not correspond to the list of all currently scheduled procedures for the modality.

4.2.7.3.1.2   Proposed Presentation Context

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will propose Presentation Contexts as shown in the following table:

Table 43 - Presentation Context "Update Worklist"

4.2.7.3.1.3   SOP Specific Conformance

▪ Search Key Attributes for the Worklist C-FIND

The Artis Q/Q.zen/zeego/zeego.zen DICOM worklist SCU supports "broad worklist queries" with all required search keys. The following table describes the "broad query" search keys that the SCU supports.

Table 44 - Supported Broad Worklist Query Search Key Attributes

R = Required

▪ Return Key Attributes of the Worklist C-FIND

The Artis Q/Q.zen/zeego/zeego.zen DICOM Worklist SCU supports worklist queries with return key attributes of all types. The following table describes the return keys that the SCU supports.

An "x" in the **UI** column will indicate the attribute is displayed in the user interface. The display is influenced by the related configuration.

A tag in the **IOD** column will indicate that the related attribute is included into the SOP Instances of the IODs created during processing of this worklist request.

A tag in the **MPPS** column will indicate that the related attribute is included into the SOP Instances of the MPPS objects created during processing of this worklist request. (See also the tables "Attributes used for the Performed Procedure Step N-CREATE" and "Attributes used for the Performed Procedure Step N-SET".)

4.2.7.3.2 Activity - Get Worklist
4.2.7.3.2.1   Description and Sequencing of Activity

With "Get Worklist" in the patient based Worklist Query dialog, the entered attributes are used to form a worklist request identifier. The response data is used to fill the Patient Registration dialog. The response data are additionally placed in the Scheduler DB.

4.2.7.3.2.2   Proposed Presentation Context

This Activity will propose the same Presentation Context as with "Update Worklist". Please see related table in section 4.2.7.3.1.2.

4.2.7.3.2.3 SOP Specific Conformance

The Artis Q/Q.zen/zeego/zeego.zen DICOM worklist SCU supports "narrow worklist queries" with all required search keys. The following tables describe the "narrow query" search keys that the SCU supports.

Table 47 - Patient based "narrow query" Search Key Attributes

The Return Key Attribute handling and supported Status Codes are identical to the "Update Worklist" activity. Please see 4.2.7.3.1.3 for details.

4.2.7.4 Association Acceptance Policy

n. a.

4.2.8   Modality PPS SCU AE

4.2.8.1   SOP Classes

For SOP Classes supported, please refer to "Table 1 - Network Services" section „Workflow Management" in the "Conformance Statement Overview".

4.2.8.2   Association Policies

4.2.8.2.1   General

The creation of MPPS Instance is done automatically by Artis Q/Q.zen/zeego/zeego.zen whenever a patient is registered for image acquisition through the Patient Registration dialog.

Further updates on the MPPS data can be done interactively from the related MPPS user interface. The MPPS "Complete" or "Discontinued" states can be set from user interface.

The default PDU size used will be 512 KB.

4.2.8.2.2   Number of Associations
The Artis Q/Q.zen/zeego/zeego.zen DICOM application initiates one association at a time to create or set the MPPS instance.

4.2.8.2.3   Asynchronous Nature
The Artis Q/Q.zen/zeego/zeego.zen DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

4.2.8.2.4   Implementation Identifying Information
For Implementation Identifying Information please refer to "Table 3 - Implementation Identifying Information" in the "Conformance Statement Overview".

4.2.8.3   Association Initiation Policy

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will notify a RIS (MPPS Manager) about the status of a procedure while it is performed. It establishes an association by using the

- N-CREATE DIMSE according to the CREATE Modality Performed Procedure Step SOP Instance operation or a
- N-SET DIMSE to update the contents and state of the MPPS according to the SET Modality Performed Procedure Step Information operation.

It is possible to configure multiple MPPS providers but only one can be active at a time. The active MPPS provider can be selected in the user settings.

4.2.8.3.1   Activity - Patient registered
4.2.8.3.1.1   Description and Sequencing of Activity

A patient is registered by the Patient Registration "Exam" action. From this event the trigger to create a MPPS Instance is derived. The related Instance is then immediately communicated to the configured RIS system. An association is established and the MPPS Instance is sent.

4.2.8.3.1.2   Proposed Presentation Context

The Artis Q/Q.zen/zeego/zeego.zen DICOM application will propose Presentation Contexts as shown in the following table:

Table 48 - Presentation Context "Patient Registered"

  - MPPS is not configured or

  - Unscheduled case

The attribute "Performed Procedure Step ID" (0040,0235) will be encoded based on "YYYYMMDDHHMMSS". This date and time is based on the time when the first image is acquired. The "Performed Procedure Step ID" stays the same for all acquired or derived images as long as the patient is re-registered. A re-registered patient with a new study or new series within the existing study will get a newly assigned "Performed Procedure Step ID".

4.2.8.4   Association Acceptance Policy

n. a.

4.3   Network Interfaces

4.3.1   Physical Network Interface

The DICOM Interface of the Artis Q/Q.zen/zeego/zeego.zen provides DICOM TCP/IP Network Communication Support and uses the TCP/IP protocol stack from the operating system. It uses the MergeCOM subroutine library. All available Ethernet interfaces are supported.

4.3.2   Additional Protocols

not applicable

4.4   Configuration

4.4.1   AE Title/Presentation Address Mapping

Local AE Titles

According to the DICOM Standard, the AET string can be up to 16 characters long and must not contain any extended characters, only 7-bit ASCII characters (excluding Control Characters).

Note: The current implementation of *syngo* does not allow Spaces and special characters (like &<> ") in the AE title string.

Change of the default AE Titles chosen by the system can be performed in the Service UI under "Configuration / DICOM / General" item - first page.

Table 53 - Default AET Characteristics

Application Entity	Default AE Title	TCP/IP Port

Remote AE Titles

When "trusted host functionality" is enabled all external AE Titles have to be configured to be able to communicate with Artis Q/Q.zen/zeego/zeego.zen.

For each remote AE the following data and capabilities can be configured:

Table 54 - Remote AE Configuration Items

Remote AE Configuration Item	Comment
Host Name	As defined in the network domain. This has to be configured also for any DICOM AE that wishes to connect to SCP services of Artis Q/Q.zen/zeego/zeego.zen.
TCP/IP address	As defined in the network domain. This has to be configured also for any DICOM AE that wishes to connect to SCP services of Artis Q/Q.zen/zeego/zeego.zen.
Logical Name	Name for the AE used in the user interfaces of the Artis Q/Q.zen/zeego/zeego.zen applications.
AE Title	AET, as provided by network administration
Port Number	Port Number, as provided by network administration
If **Storage** Service support is checked	
Transfer Syntax	Selection of uncompressed transfer Syntaxes supported by remote AE
Compression	Selection of additional compression Syntaxes supported for remote AE
Default Node	"first default"/"second default"/["no default"] - activating this feature will show "Send to <logical name>" in the Transfer tool menu for quick access.
Preference Node	When checked, the remote AE will be assigned to a keyboard shortcut key.
Archive Node	When checked, sending to remote AET will set status of **a**(rchived), else **s**(ent) is indicated.
Default Archive	When checked, the remote AE will be listed as default archive in User interfaces.
Graphics in Pixel Data	When checked, the DICOM overlay will not be encoded in attribute (60xx,3000) Overlay Data, but masked in the "unused bits" of the pixel data (only for uncompressed transfer syntaxes). For backwards compatibility with legacy AE.
Select SC node	Select a previously configured node as target for Storage Commitment when sending DICOM objects to the configured AE. Default is the same node as to which the Objects are sent.
Select SC AET	Select AET that corresponds to the above selected node that receives the Storage Commitment request. Default is the above specified "AE Title".
SC Result in same association	When checked the Artis Q/Q.zen/zeego/zeego.zen DICOM application will await the Storage Commitment N-EVENT-REPORT on the same association. Default is "not checked" (= different association).
SC result timeout	Timeout in hours and minutes to wait at the open association. Default: 01**:**00 (hour**:**minutes).
If **Storage Commitment** Service support is checked	

Remote AE Configuration Item	Comment
n. a.	The related Storage Commitment configuration is either in the Storage section of the same AET or different AET (in case the current AET is only Storage Commitment Provider).
If **Query** Service support is checked	
provides DICOM Query model	The Query models supported by this AET can be selected. When possible, the STUDY ROOT model should preferably be configured
If **Retrieve** Service support is checked	
n. a.	Checking Retrieve support for an AET is the only needed configuration item. This will allow access to the "Import" feature in the Query result browser.
If **Modality Worklist** Service support is checked	
Query Waiting time	The time to wait for the C-FIND-RSP after sending the C-FIND-RQ (default 20 sec.)
Max Query Match Number	The maximum number of entries accepted in one worklist (default is 200)
Query Interval	The time between two C-FIND-RQ to the Hospital Information system (default is 60 min, minimum is 3 min, maximum is 1440 min i.e. 24 hours)
Automatic removal of canceled/rescheduled Requests	Checking this item will removed all unused entries from the scheduler list prior to inserting the worklist responses with each query.

4.4.2   Parameters

System parameters can be changed in the Service UI under "Configuration / DICOM / General" item - second page.

Table 55 - General parameter settings and timeouts

Time-out Values				
Parameter	Default Value [sec]	Min [sec]	Max [sec]	Comment
Accepting/Rejecting an Association Request	60	15	600	Wait for an Association Request or wait for a Peer to shut down the Association
Association Open Request	60	15	600	Wait for a reply to an Association Accept Request
Association Close Request	60	15	600	Wait for a reply to an Association Release Request
Accepting a Message over Network	300	15	600	Wait for a Network Write to be accepted
Waiting for Data between TCP/IP Packets	60	15	600	Wait for Data between TCP/IP packets
Response from Remote Node for Storage/Query/Retrieve	600	15	600	Time between Service Request and Service Response
Accept network connect	60	15	600	

General Transfer Setting				
Simultaneous DICOM associations	10	1	10	Number of simultaneous associations running.
Maximum PDU Size	512 KB	4 KB	1 MB	Proposed PDU size, each selectable value is doubled from previous, starting with 4 KB. Additionally for optimization for some networks 28 KB are provided.

# 5   Application Profile Conformance Statement

The following "Offline Media Application Profiles (incl. private extensions)" are supported by Artis Q/Q.zen/zeego/zeego.zen archive options.

Table 56 - Supported Application Profiles

Application Profile
Basic Cardiac
1024 Extended Cardiac
General Purpose CDR

5.1   Implementation Model

5.1.1   Application Data Flow Diagram
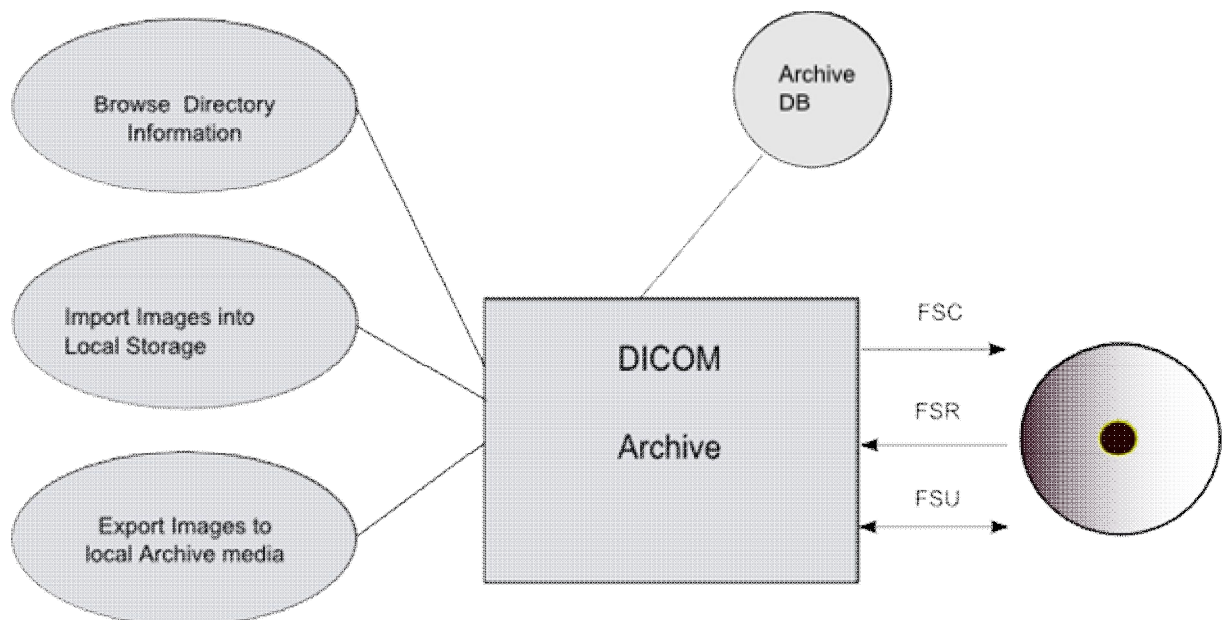

Table 57 - Application Data Flow DICOM Archive

The DICOM archive application will serve as an interface to the CD-R/DVD offline medium device.

The DICOM Archive application will support the 120mm CD-R and DVD medium.

The FSU role will update new SOP Instances only to media with pre-existing File-sets conforming to the Application Profiles supported.

The contents of the DICOMDIR will temporarily be stored in Archive-Database.

5.1.2   Functional Definitions of AEs

The Artis Q/Q.zen/zeego/zeego.zen DICOM offline media storage application consists of the DICOM Archive application entity serving all interfaces to access offline media. The DICOM Archive application is capable of

---

- creating a new File-set onto an unwritten medium (Export to…).

- updating an existing File-set by writing new SOP Instances onto the medium (Export to...).

- importing SOP Instances from the medium onto local storage

- reading the File-sets DICOMDIR information into temporary database and pass it to display applications.

5.1.3   Activities

5.1.3.1   Description and Sequencing of Activity FSR

The DICOM Archive application will not perform transfers until the Directory information of the DICOMDIR is completely read in and displayed in the Browser.

5.1.4   Implementation Identifying Information

For Implementation Identifying Information please refer to "Table 3 - Implementation Identifying Information" in the "Conformance Statement Overview".

5.2 AE Specifications

5.2.1 DICOM Archive Specification

The DICOM Archive provides Standard conformance to Media Storage Service Class (Interchange Option). Details are listed in following Table:

Table 58 - Mapping of Application Profiles Supported

Application Profiles Supported	Activity	Role	SC Option
STD-GEN-CD STD-XABC-CD STD-XA1K-CD STD-GEN-DVD STD-GEN-DVD-JPEG	Browse Directory Information	FSR	Interchange
	Import into local Storage	FSR	Interchange
	Export to local Archive Media	FSC, FSU	Interchange

5.2.1.1 File Meta Information for the Application Entity

The Source Application Entity Title is set by configuration and is same as used for Storage provider.

5.2.1.2 Activities of DICOM Archive

5.2.1.2.1 Activity "Browse Directory Information"

The DICOM Archive application acts as FSR using the interchange option when requested to read the media directory.

The DICOM archive application will read the DICOMDIR and insert those directory entries that are valid for the application profiles supported, into a local database. The database can then be used for browsing media contents.

Note: Icon Image Sequence is also supported in DICOMDIR. But only those Icon Images with Bits Allocated (0028,0100) equal to 8 and size of 64x64 or 128x128 pixels are imported into database and are visible in the Browser.

5.2.1.2.1.1   Media Storage Application Profile

See "Table 58 - Mapping of Application Profiles Supported" in section 5.2.1 for the Application Profiles listed that invoke this Application Entity for the Browse Directory Information activity.

5.2.1.2.2 Activity "Import into Local Storage"

The DICOM Archive application acts as FSR using the interchange option when being requested to read SOP Instances from the medium into the local storage.

The SOP Instance(s) selected from the media directory will be copied into the local storage. Only SOP Instances, that are valid for the application profile supported and are listed as supported by the Storage SCP Conformance section (Network DCS, 5.1.3), can be retrieved from media storage.

For media conforming to the STD-GEN-xxx Profile the following SOP Classes will be supported as FSR:

Table 59 - STD-GEN-xxx profile supported SOP Classes

5.2.1.2.2.1   Media Storage Application Profile

See "Table 58 - Mapping of Application Profiles Supported" in section 5.2.1 for the Application Profiles listed that invoke this Application Entity for the Import into Local Storage activity.

5.2.1.3   Activity "Export to Local Archive Media"

The DICOM Archive application acts as FSU (for media with existing DICOM file-set) or FSC (media not initialized) using the interchange option when requested to copy SOP Instances from the local storage to local Archive Medium.

The DICOM Archive application will receive a list of SOP Instances to be copied to the local archive medium. According to the state of the medium inserted (new medium, Medium with DICOM file-set) the validity of the SOP Instances according to the applicable profile is checked. Only valid SOP Instances are accepted.

The DICOM Archive application will not finalize the medium.

With the resizing feature of the Artis Q/Q.zen/zeego/zeego.zen DICOM application, a copy of images in Cardiac Format (512x512, 8Bit) can be written onto medium.

5.2.1.3.1.1   Media Storage Application Profile

See "Table 58 - Mapping of Application Profiles Supported" in section 5.2.1 for the Application Profiles listed that invoke this Application Entity for the Export to Local Archive Media activity.

5.4 Media Configuration

5.4.1 Single- / Multi-Session CD burning

Please refer to most recent Service / Configuration documentation of Artis Q/Q.zen/zeego/zeego.zen for changing between the single-session and multi-session recording modes.

5.4.2 "Viewer on CD"

Please refer to most recent Service / Configuration documentation of Artis Q/Q.zen/zeego/zeego.zen for changing between the

ACOM.PC Lite 2.0 or *syngo* **FastView**

as application that is included onto the medium as part of the "Viewer on CD" feature, if the feature is checked in the Media Creation user interface (see also next configuration item).

5.4.3 Auto-Labeling

Please refer to most recent Service / Configuration documentation of Artis Q/Q.zen/zeego/zeego.zen for activating the auto-labeling of CD media to avoid the label inquiry dialog when using automatic media export. The auto-labeling can be activated with the "Viewer on CD" feature being implicitly checked or not.

6   Support of Extended Character Sets

The Artis Q/Q.zen/zeego/zeego.zen DICOM application supports the following character sets as defined in the four tables below:

When there is a mismatch between the Specific Character Set tag (0008,0005) and the characters in an IOD received by the system, then the following measures are taken to make the characters DICOM conform:

▪ Try to import with ISO_IR 100. If ISO_IR 100 fails, convert each illegal character to a '?'.

There are now three categories of character sets which have to be differentiated because of their different encoding formats:
  ▪ Conventional ISO character sets: ISO_IR 6, ISO 2022 IR 6, ISO_IR 100, etc.
    → encoded in ISO 2022
  ▪ ISO IR_192 → encoded in UTF-8
  ▪ GB18030 → encoded in GB18030

It is not possible to recognize the following mismatches automatically on receiving or importing:

▪ An attribute value is encoded in ISO_IR 192 ← → (0008,0005) contains a conventional ISO character set as primary character set.

▪ An attribute value is encoded in GB18030 ← → (0008,0005) contains a conventional ISO character set as primary character set.

▪ An attribute value is encoded in ISO 2022 ← → (0008,0005) contains ISO_IR 192.

▪ An attribute value is encoded in ISO 2022 ← → (0008,0005) contains GB18030

An IOD that contains one of the above mentioned inconsistencies is not DICOM conform. As these kinds of inconsistencies cannot be recognized by the system, the IOD will not be rejected but the character data might not be displayed as intended.

7   Security

The Artis Q/Q.zen/zeego/zeego.zen is supporting security by having the firewall of the underlying operating system active. Besides the standard ports of the operating system, only the DICOM Port (104) is opened.

---

[i] Note: This Character Set is an extension of DICOM for the Chinese language.

When "trusted host functionality" is enabled, the Artis Q/Q.zen/zeego/zeego.zen only accepts DICOM communication from other AE if the related System is configured with its hostname, port and AET.

8   Annexes

8.1   IOD Contents

8.1.1   Created SOP Instances

8.1.1.1   X-Ray Angiographic Image Standard Extended SOP Class

The Artis Q/Q.zen/zeego/zeego.zen system will create images during acquisition and with post processing applications. Those will be encoded as XA Standard Extended SOP Class. Images created during post processing will be marked as derived. Please see the following table for a complete overview of supplied Type 1/2/3 Standard and additional Private Attributes:

The Standard DICOM Modules will be used to encode ECG data.

8.1.1.1.2 Quant Report Images - derived XA

The Artis Q/Q.zen/zeego/zeego.zen will create result images from performing Quantitative Analysis Functions. To ensure image interchange, the resulting reports can be converted to standard XA multi-frame images. The pixel data contain the result information as an image.

All patient level, study level and equipment information is taken from the acquired images of the related procedure.

Acquisition specific information (e.g. KVP, mA) is taken from the original image that was subject to the analysis. Not applicable information is set either to default values or not set at all.

The overlay graphic and curve module are not used with Quant images.

Quant images are always sent as 1024x1024 12 bit. Multi-frames are used to support reports with multiple pages.

8.1.1.1.3 Exam Protocol as XA Image

The Artis Q/Q.zen/zeego/zeego.zen will generate an X-Ray Radiation Dose SR object to store all dose and acquisition relevant information for all irradiation events. An excerpt of this information is displayed to the user as "Exam Protocol". This displayed Exam Protocol can be converted to an XA multi-frame image. The pixel data contain the protocol data as an image.

All patient level, study level and equipment information is taken from the acquired images of the related procedure.

Acquisition specific information (e.g. KVP, mA) and further information is set either to default values (type 1), set to zero length (type 2) or not set at all.

The overlay graphic and curve module are not used with Exam Protocol as XA image.

8.1.1.1.4 CT/MR Image converted to XA Image

The Artis Q/Q.zen/zeego/zeego.zen system will create reference images from CT or MR images. Those will be encoded as derived XA Standard Extended SOP Class to support display at the XA image viewing application.

All patient and study level information is taken from the original CT/MR image.

Image Pixel data is converted and set to a format that it is supported by the viewing application.

The overlay graphic is taken from the original image.

Note: The Artis Q/Q.zen/zeego/zeego.zen supports only conversion of CT/MR images with matrix size 512x512 and 1024x1024 and bit depth 8, 10 or 12 bit. For other formats an additional converter functionality has to be installed.

8.1.1.2 Secondary Capture Image Standard Extended SOP Class

It is possible to create colored screen shot images during Quantification and IVUSmap. Those will be encoded as Secondary Capture Image Standard Extended SOP Class. Please see the following table for a complete overview of supplied Type 1/2/3 Standard and additional Private Attributes:

8.1.1.3   SR Document SOP Class

The Artis Q/Q.zen/zeego/zeego.zen will create Reports on demand for long-term archival of Quantitative Analysis results. Furthermore an X-Ray Radiation Dose SR is created for each Study performed on the system. Please refer to next sections to learn about the SR implementation and the definition of the underlying SR template.

8.1.1.3.1 X-Ray Radiation Dose SR SOP Class

The Artis Q/Q.zen/zeego/zeego.zen will create X-Ray Radiation Dose SRs implementing TID 10001 *Projection X-Ray Radiation Dose*

For every single irradiation event an entry is made into the SR.
The scope of accumulation is "Study". The report is kept open (Completion Flag (0040,A491) = "PARTIAL") to support continuation of the study. Updating of a SR will not change the SOP Instance UID.

All patient level, study level and equipment information is taken from the acquired images of the related procedure.

Attribute mapping from Modality Worklist to X-Ray Radiation Dose SR is equal to the mapping into acquired images. Please refer to Table 45 - Basic Worklist C-FIND-RSP Return Key Attributes for mapping of worklist information.

For details on the contents of the Accumulated X-Ray Dose Container (TID 10002), please see table below (one container per plane).

Table 66 - Details on Accumulated X-Ray Dose Data

Concept Name	Comments on Concept Value
Dose Area Product Total	The accumulated dose area product (measured with dose chamber near collimator) applied during fluoro and acquisition performed in this plane [Gym^2].
Dose (RP) Total	Calculated accumulated dose at the RP applied during fluoro and acquisition performed in this plane [Gy]. (Not corrected for backscatter)
Fluoro Dose Area Product Total	The accumulated dose area product applied during fluoro performed in this plane [Gym^2].
Fluoro Dose (RP) Total	Calculated accumulated dose at the RP applied during fluoro performed in this plane [Gy].
Total Fluoro Time	Total time of fluoro performed in this plane [s]. (pedal time)
Acquisition Dose Area Product Total	The accumulated dose area product applied during acquisition performed in this plane [Gym^2].
Acquisition Dose (RP) Total	Calculated accumulated dose at the RP applied during acquisition performed in this plane [Gy].
Total Acquisition Time	Total time of acquisition performed in this plane [s]. (pedal time)

For details on the contents of the Irradiation Event Container (TID 10003), please see table below (one container per irradiation event).

Table 67 - Details on Dose SR Irradiation Event Data

Concept Name	Comments on Concept Value
Acquisition Plane	"Plane A" - taken by primary plane of biplane system "Plane B" - taken by secondary plane of biplane system "Single Plane" - taken by a single-plane system
DateTime Started	Start of X-Ray
Irradiation Event Type	"Fluoroscopy" - irradiation applied by Fluoro pedal "Stationary Acquisition" - irradiation applied by Acquisition pedal, no system-controlled movement "Rotational Acquisition" - irradiation applied by Acquisition pedal, system-controlled rotational movement
Acquisition Protocol	Name of the organ program used to parameterize this irradiation event
Reference Point Definition	The Interventional Reference Point (IRP) for the system is always "15cm from Isocenter toward Source"
Acquired Image	SOP Instance UID of the acquired image as link to that image. Always present for "Stationary Acquisition" and "Rotational Acquisition". Only present for "Fluoroscopy" if the 'Store Fluoro Scene' feature was used to permanently store the Fluoro result (max. 300 Frames in ring buffer).
Irradiation Event UID	UID identifying this event.
Dose Area Product	The dose area product (measured with dose chamber near collimator) applied by this irradiation event in $[Gym^2]$.
Dose (RP)	Calculated dose at the RP in [Gy]. (Not corrected for backscatter)
Positioner Primary Angle	Patient-based angle of the primary plane in [°]. For "Rotational Acquisition" this is the start position of the movement.
Positioner Secondary Angle	Patient-based angle of the secondary plane in [°]. For "Rotational Acquisition" this is the start position of the movement.
Positioner Primary End Angle	Only with "Rotational Acquisition" - this is the primary plane end position of the movement.
Positioner Secondary End Angle	Only with "Rotational Acquisition" - this is the secondary plane end position of the movement.
Collimated Field Area	Collimated field area at detector plane in $[m^2]$.
X-Ray Filters	A CONTAINER with the subsequent items marked with a ">"
>X-Ray Filter Type	Either "No Filter" or "Strip filter" is set.
>X-Ray Filter Material	If filter is used, a value of "Copper or Copper Compound" is set.
>X-Ray Filter Thickness Minimum	Minimal thickness of the applied filter in [mm].
>X-Ray Filter Thickness Maximum	Maximal thickness of the applied filter in [mm]. Artis uses uniform filter thickness, so this value always matches the minimal thickness value.
Fluoro Mode	Only with "Fluoroscopy" - Artis uses "Pulsed" Fluoroscopy only
Pulse Rate	The used pulse rate for this irradiation event in [pulse/s].
Number of Pulses	The number of X-Ray pulses generated during performance of this irradiation event.
KVP	The mean-value for the voltage applied by this irradiation event in [kV].
X-Ray Tube Current	The mean-value for the tube current applied by this irradiation event in [mA].
Exposure Time	Time calculated according to the term "Number of Pulses" x "Pulse Width". Is the "X-Ray on" time for this irradiation even in [ms]. This is not the "pedal time" (esp. the time the pedal was activated).
Pulse Width	The mean-value for the pulse width for each X-Ray pulse applied by this irradiation event in [ms].
Exposure	Exposure value calculated according to the term "X-Ray Tube Current" x "Exposure Time" in [uAs]
Focal Spot Size	Size of the focal spot in [mm] that was used during the performance of this irradiation event.
Distance Source to Detector	The Source Image Distance (SID) as it is valid at the end of the irradiation event in [mm].

Concept Name	Comments on Concept Value
Distance Source to Isocenter	The fixed value of the Source to Isocenter distance in [mm]. Value depends on the c-arm model.
Table Longitudinal Position	The offset (in [mm]) of the table origin (at the table head end) to the Isocenter in table lateral direction (with the patient lying in head-first supine position, the value is incrementing in the left lateral direction of the patient. The zero coordinate is in the centerline of the table).
Table Lateral Position	The offset (in [mm]) of the table origin (at the table head end) to the Isocenter in table longitudinal direction (with the patient lying in head-first supine position, the value is incrementing in cranial direction of the patient. The zero coordinate is at the table head side end).
Table Height Position	The offset of the table origin (at the table head end) to the Isocenter in table lift direction (with the patient lying in head-first supine position, the value is incrementing in anterior direction of the patient. Positive values indicate the Isocenter is ABOVE the table plane. The zero coordinate is in the table plane).
Target Region	Fixed value of "Entire body" is used.
Comment	Contains additional information items from the Exam Report in XML like structure. There are separate contents for "Fluoroscopy" or "Acquisition". For details see paragraph below this table.
Device Role in Procedure	The value of "Irradiating Device" is always set. The subsequent items marked with a ">" give additional details.
>Device Name	Logical name of the device taken from site configuration. Is also used as Station Name (0008,1010) in DICOM Image Header.
>Device Manufacturer	The value of "Siemens" is always set. Is also used as Manufacturer (0008,0070) in DICOM Image Header.
>Device Model Name	The value of "AXIOM-Artis" is always set. Is also used as Manufacturer's Model Name (0008,1090) in DICOM Image Header.
>Device Serial Number	Serial number of the device taken from site configuration. Is also used as Device Serial Number (0018,1000) in DICOM Image Header.

In case of "Fluoroscopy" the following XML structure is provided in the "Comment" Concept Value (the values are sample values and will be individually set for each event):

8.1.1.3.2 Comprehensive SR SOP Class

The Artis Q/Q.zen/zeego/zeego.zen will utilize the Comprehensive SR SOP Class to report measurements from the quantification application. It is implementing TID 3202 *Ventricular Analysis* to create the SR.

All patient level, study level and equipment information is taken from the acquired images of the related procedure.

Attribute mapping from Modality Worklist to X-Ray Radiation Dose SR is equal to the mapping into acquired images. Please refer to Table 45 - Basic Worklist C-FIND-RSP Return Key Attributes for mapping of worklist information.

8.1.2   Usage of attributes from received IODs

Please refer to the "SOP-specific conformance…" sections in the DICOM networking part of this DCS for more details on attribute specific handling.

8.1.3   Attribute mapping

The Artis Q/Q.zen/zeego/zeego.zen implements an actor Acquisition Modality according to the IHE Scheduled Workflow (SWF) profile.
The relationships between attributes received via Modality Worklist, stored in acquired images and communicated via MPPS are summarized in Table 45 - Basic Worklist C-FIND-RSP Return Key Attributes

8.1.4   Coerced/Modified fields

The Artis Q/Q.zen/zeego/zeego.zen DICOM Application is not performing data coercion.

8.3   Coded Terminology and Templates

not applicable

8.4   Grayscale Image Consistency

The high resolution TFT display monitor option of Artis Q/Q.zen/zeego/zeego.zen comes with a DICOM Grayscale Standard Display Function (GSDF) compliant factory pre-setting. A typical working environment setup is assumed for ambient light.

8.5 Standard Extended/Specialized/Private SOP Classes

8.5.1 Standard Extended XA

The XA SOP Instances created by Artis Q/Q.zen/zeego/zeego.zen are standard-extended by adding the following private module attributes.

Table 69 - Private Modules for Standard Extended XA

IE	Module	Reference	Usage	Note
Image	Edge Enhancement	8.5.1.1	U	private Filter Information
	Angio Viewing	8.5.1.2	U	private Viewing information

8.5.1.1 Edge Enhancement Module

The table in this section contains private IOD Attributes that describe Edge Enhancement extensions due to the Dynamic Cardio Review definition.

Table 70 - (Private) Edge Enhancement Module

Attribute Name	Tag	Owner	Type	Notes
Standard Edge Enhancement Sequence	(0029,xx00)	CARDIO-D.R. 1.0	3	Standard formula according to Dyna view Extensions. For DSA images two items are provided, one item for native and a second for DSA viewing
>Convolution Kernel Size	(0029,xx01)	CARDIO-D.R. 1.0	1C	x-/y-size value pair. Each value shall be greater or equal to 3. Required if sequence is present
>Convolution Kernel Coefficients	(0029,xx02)	CARDIO-D.R. 1.0	1C	Row-by-row list of the kernel Coefficients. Required if sequence is present
>Edge Enhancement Gain	(0029,xx03)	CARDIO-D.R. 1.0	1C	Applied Filter gain Factor. Required if sequence is present

8.5.1.3   Angio Acquisition Data Module

The table in this section contains private IOD Attributes that describe additional Attributes for saving specific Angio Acquisition data.

Table 72 - (Private) Angio Acquisition Data Attributes

Attribute Name	Tag	Owner	Type	Notes
Acquisition Type	(0021,xx00)	SIEMENS SMS-AX ACQ 1.0	3	Technical Type of Acquisition performed to get image result. Defined Terms are 1 = fixed frame rate, 2 = variable frame rate (manually triggered), 3 = variable frame rate (time triggered), 4 = peri manual to head, 10 = dynavision manual inject., 11 = dynavision automatic, 14 = pulsed fluoro, 15 = ECG triggered fluoro 16 = scanning slow speed 17 = scanning fast speed
Acquisition Mode	(0021,xx01)	SIEMENS SMS-AX ACQ 1.0	3	Technical Mode of Acquisition performed to get image result. Defined Terms are: 0 = no mode specified, 1 = Digital Radiography, 2 = DSA, 3 = Peri-DSA, 4 = DR stepping, 5 = DR Dynavision (nat), 6 = Dynavision (sub), 7 = Card, 9 = 3D Mode 20 = Roadmap Fluoro, 21 = Normal Fluoro,
Foot Switch Index	(0021,xx02)	SIEMENS SMS-AX ACQ 1.0	3	

Attribute Name	Tag	Owner	Type	Notes
Acquisition Room	(0021,xx03)	SIEMENS SMS-AX ACQ 1.0	3	
Current Time Product	(0021,xx04)	SIEMENS SMS-AX ACQ 1.0	3	(uAs)

8.5.2.1 MEDCOM Header

The table in this section contains private IOD Attributes that describe the MEDCOM Header:

Table 78 - MEDCOM Header Attributes

Attribute Name	Tag	Owner	Type	Notes
MedCom Header Type	(0029,xx08)	SIEMENS MEDCOM HEADER	1C	MedCom Header identification characteristics. Defined Terms: MEDCOM 1 (Required if MedCom Header Info (0029,xx10) present.)
MedCom Header Version	(0029,xx09)	SIEMENS MEDCOM HEADER	2C	Version of MedCom Header Info (0029,xx10) format. (Required if MEDCOM Header Info (0029,xx10) present.)
MedCom Header Info	(0029,xx10)	SIEMENS MEDCOM HEADER	3	Manufacturer model dependent information. The value of the attribute MedCom Header Info (0029,xx10) can be build up in each user defined format.
MedCom History Information	(0029,xx20)	SIEMENS MEDCOM HEADER	3	MedCom defined Patient Registration history information. See A.1.3.1.

PMTF Information 5	(0029,xx35)	SIEMENS MEDCOM HEADER	3	Transformation Information
Application Header Sequence	(0029,xx40)	SIEMENS MEDCOM HEADER	3	Sequence of Application Header items. Zero or more items are possible.
>Application Header Type	(0029,xx41)	SIEMENS MEDCOM HEADER	1C	Application Header identification characteristics. Required, if Sequence is sent.

Attribute Name	Tag	Owner	Type	Notes
>Application Header ID	(0029,xx42)	SIEMENS MEDCOM HEADER	3	Identification of an application header
>Application Header Version	(0029,xx43)	SIEMENS MEDCOM HEADER	3	Version of CSA Series Header Info (0029,xx44) format.
>Application Header Info	(0029,xx44)	SIEMENS MEDCOM HEADER	3	Application dependent information.
Workflow Control Flags	(0029,xx50)	SIEMENS MEDCOM HEADER	3	Eight free definable flags.
Archive Management Flag Keep Online	(0029,xx51)	SIEMENS MEDCOM HEADER	3	Flag to control remote archive management system to keep the image always online (also when already archived). Enumerated Values: 00 = remote control not required 01 = keep image online
Archive Management Flag Do Not Archive	(0029,xx52)	SIEMENS MEDCOM HEADER	3	Flag to control remote archive management system not to archive the related image. Enumerated Values: 00 = remote control not required 01 = don't archive image
Image Location Status	(0029,xx53)	SIEMENS MEDCOM HEADER	3	Image location status to control retrieving. Defined Terms: ONLINE = retrieving has to be done as usual, NEARLINE = move request to SCP and delay according to value of Estimated Retrieve Time (0029,xx54), OFFLINE = invoking a retrieve operation initiates an operator request, INVALID = invoking a retrieve operation would always result in an error.
Estimated Retrieve Time	(0029,xx54)	SIEMENS MEDCOM HEADER	3	Estimated retrieve time in seconds. A value less then zero (< 0) indicates location is OFFLINE or INVALID.
Data Size of Retrieved Images	(0029,xx55)	SIEMENS MEDCOM HEADER	3	Data size of images in MByte.
Series Workflow Status	(0029,xx60)	SIEMENS MEDCOM HEADER2	3	

8.5.2.1.1 MEDCOM History Information

The value of the attribute MEDCOM History Information (0029,xx20) is defined in the following way:

Table 79 - MEDCOM History Information Attributes

Part	Name	Type	Bytes	Notes
header	Identifier	string	32	Always "CSA HISTORY"
	Version	string	32	e.g. "V1.10"

8.5.2.2   MEDCOM OOG

The table in this section contains private IOD Attributes that describe MEDCOM Object Oriented Graphics (OOG). This module is used whenever object graphics is drawn on the image and need to be stored as graphic object properties. Given the condition that the module contents was not

removed by other modalities, the graphic objects remain re-animatable if such an image was transferred and is then retrieved back.

Table 80 - MEDCOM OOG Attributes

Attribute Name	Tag	Owner	Type	Notes
CSA Series Header Type	(0029,xx08)	SIEMENS MEDCOM OOG	1	MEDCOM Object Oriented Graphics (OOG) identification characteristics. Defined Terms: MEDCOM OOG 1 MEDCOM OOG 2
CSA Series Header Version	(0029,xx09)	SIEMENS MEDCOM OOG	3	Version of MEDCOM OOG Info (0029,xx10) format.
CSA Series Header Info	(0029,xx10)	SIEMENS MEDCOM OOG	3	MEDCOM Object Oriented Graphics (OOG) data.

The graphics objects are also fully encoded in the Image Overlay Plane for compatibility with other products, which do not support the MedCom OOG module. Any system not supporting the MedCom OOG module shall remove the OOG module and its contents when modifying the image overlay plane content.

8.6   Private Transfer Syntaxes

No private Transfer Syntaxes are defined for or requested by Artis Q/Q.zen/zeego/zeego.zen DICOM application.

8.7 Sorting Order Artis Q/Q.zen/zeego/zeego.zen

This section discusses the sorting algorithms for Artis within the patient browser and directory overview.

8.7.1 Identification of Images

Original acquired images are identified by the following attribute contents:

8.7.2   The Sorting Algorithms of the Artis Viewer

Artis Q/Q.zen/zeego/zeego.zen has implemented sorting algorithms to display DICOM objects in the directory overview in a specific order. Sorting/Grouping in the Viewer Directory Overview occurs according the following rules:

1. Sort by Series Number
2. If Series Number matches: Group on Series Number, Sort by Instance Number
3. If Series Number and Instance Number each match: Group on Series Number, Sort by Content Time

In the case, that the user has selected "Scenes + Ref Images" or "Scenes + Store Monitor", the reference images or the store monitor images follow directly the image they had been derived from.

Example 1:

Patient "Test 1" with one Study, three Series with one acquired image, three Store Monitor Images and one Reference Image in each Series. "Scenes" is selected under the "Dir Overview" button => only the acquired images are displayed.

Patient "Test 1"

Table 86 - Viewer image ordering - simple case

Example 2:

8.7.3   The Sorting Algorithms of the Artis Browser

Besides the default sorting criteria, Artis supports the following sorting algorithms for the patient browser.

The default *syngo* sorting settings are as follows

- Artis displays images - within a Series - with the order they had been acquired
- Artis displays Series - within a Study - with the order they had been acquired
- Artis displays Studies - within a Patient - with the order they had been acquired

Therefore the Quant Report Series will not necessarily be displayed adjacent to the original scene, if created later at the end of all scenes.

8.8 Supported Matrix Sizes of Artis Q/Q.zen/zeego/zeego.zen

Depending on detector size and mode the Artis Q/Q.zen/zeego/zeego.zen supports different matrix sizes. These matrix sizes are also used by the Storage AE when sending the images to a remote SCP. Additionally it is possible to send images resized to 512x512 and 1024x1024.

Artis Q/Q.zen/zeego/zeego.zen uses following original Matrix Sizes:

Detector Size	Rows (0028,0010)	Columns (0028,0011)

8.9 DICOM Print SCU - detailed status displays

The following tables document the behavior of the Artis Q/Q.zen/zeego/zeego.zen DICOM Print AE in response to messages received for the Printer SOP Class and the Print Job SOP Class.

Definition of camera symbols:

- Idle: Camera is installed and ready; idle icon is displayed.

- Interact: The user has to react in near future, but not immediately.
  Example: A camera was low in 8x10 clear sheets: LOW 8x10 CLR was sent by N-EVENT-REPORT.

- Queue Stopped: The user has to react immediately. Either the camera needs immediate interaction or a job has been aborted.
  Example: A camera is out of 8x10 clear sheets, or camera is down, or a film job is aborted

Note: different camera symbols are displayed according to the Printer Status Info.
