

Cardiology Dashboard

Digitalizing healthcare

Cardiology service lines are under pressure to improve productivity, efficiency, and quality every day.

Opening a window into your cardiology workflow and operations, teamplay Cardio* provides timely and meaningful insights into performance and status: from procedure volume and turnaround statistics to the detailed analysis of the utilization of staff, rooms and resources. The cloud-based cardiology dashboard provides actionable data to help you identify precise starting points for planning and allocating resources to improve patient flow and physician efficiency.

Time-consuming to measure, manage, and compare KPI's

The cardiovascular service line manager has to collect data from different resources, which is time-consuming. It makes it difficult to benchmark departments based on KPI's and leverage best practice throughout the enterprise.

Lack of transparency for proactive management of daily operations

A lack of transparency regarding the clinical and operational key performance indicators of the cardiology service line makes it difficult to identify patient flow and supply chain deficiencies and act immediately.

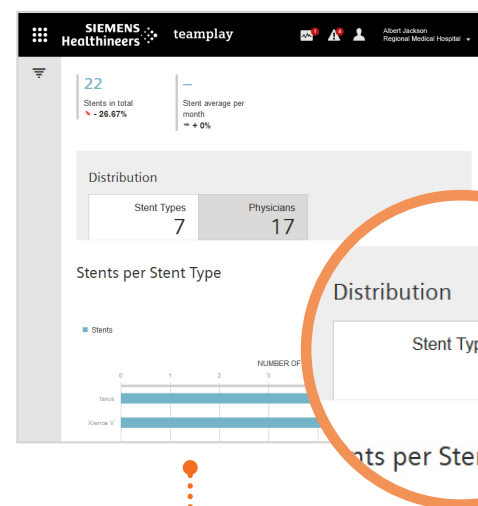

High pressure to become more efficient and improve performance

Difficult to collect and consolidate data to get the bigger picture - from ordering to report verification - to improve clinical and operational outcomes of the cardiovascular service line.

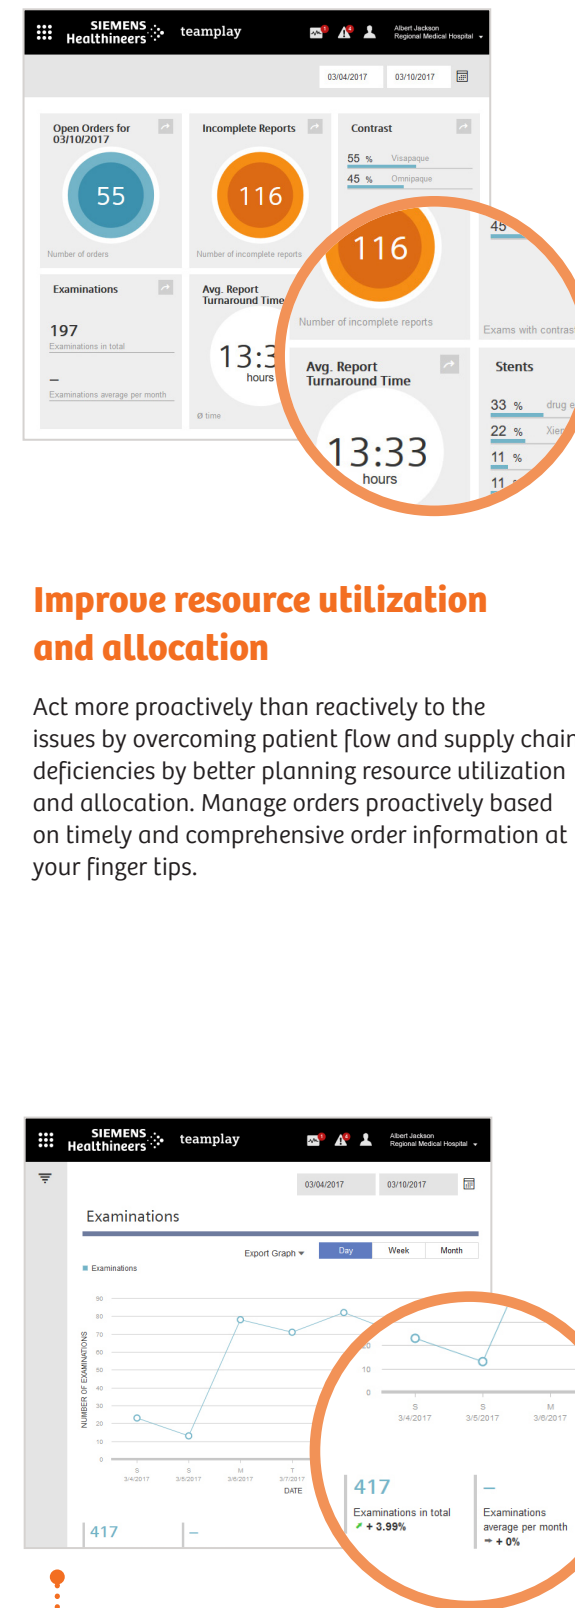

Track capacity, workflow and supplies

Benefit from a minimal learning curve in an intuitively designed user interface as you analyze and navigate near-real-time key performance indicators of your cardiology department. teamplay Cardio collects, combines, processes and harmonizes data from both DICOM and non-DICOM systems to give you a comprehensive cross-source look at the department's performance, resources, and status.

A holistic view from different angles

Turning complex data into a visually intuitive view helps you to identify areas of clinical and operational improvement and assures patient results are communicated in a timely and efficient manner. Explore collected and consolidated data on turnaround time, patient flow, etc. to see, which of facility applies the best practices – precise starting points for enhancing efficiency and competitiveness intuitively.

Improve resource utilization and allocation

Act more proactively than reactively to the issues by overcoming patient flow and supply chain deficiencies by better planning resource utilization and allocation. Manage orders proactively based on timely and comprehensive order information at your finger tips.

* teamplay Cardio is available in the USA only. Pre-requisite for teamplay Cardio: an existing installation of syngo Dynamics VA20D with the enhanced data export functionality as well as a teamplay receiver installation. For teamplay Cardio Orders- MLA needs to be ordered.
