SIEMENS
Healthineers 

Faster, Simpler, More Cost-Effective Options for
Your Equipment Installation and Construction

Design & Construction Services

When you have made the decision to invest in new medical imaging equipment, you face the challenge of getting that equipment into service quickly, smoothly, and cost effectively. At Design and Construction Services (DCS) from Siemens Healthineers, we specialize in medical facilities construction. From feasibility analysis to on-time and on-budget completion, whether we do the whole project or just a portion, our professionalism and expertise will help save you time and money.

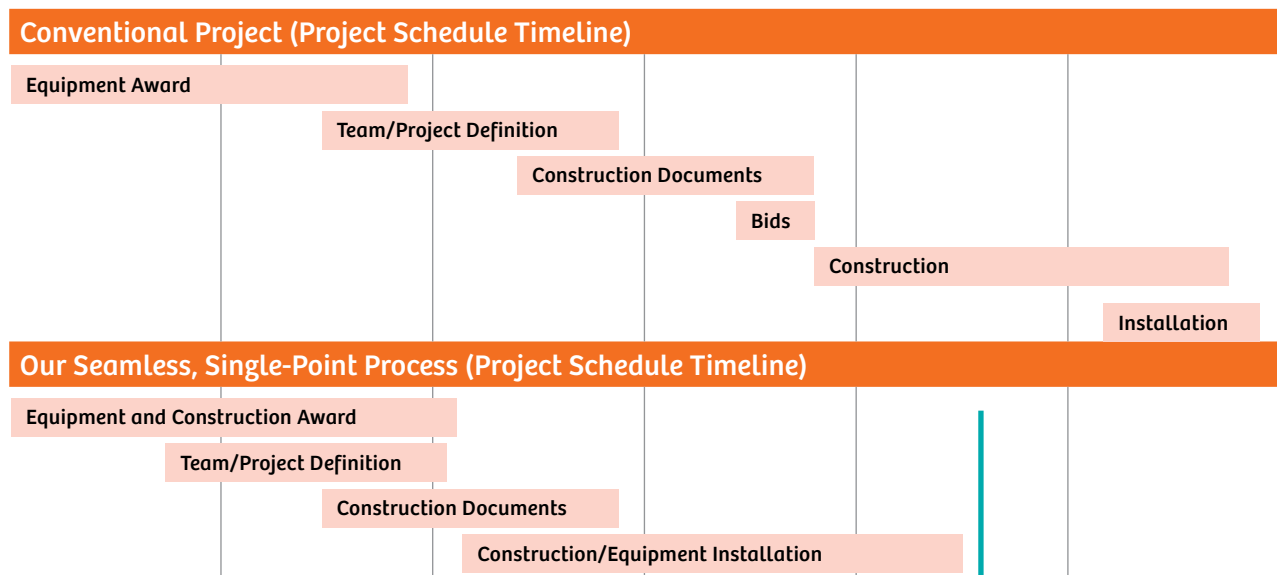

The DCS Advantages

Relief: From concern about construction schedules or problems

Trust: A single point of contact who knows patient-care priorities

For every DCS project, we strive to deliver:

- In-depth expertise for every phase of your project—from long before you have made a purchase decision all the way through final construction.
- Elimination of time-consuming steps that often delay construction and installation.
- Seamless, fully integrated design/build process.
- Condensed overall project schedule.
- Reduced demands on your time and resources in construction planning and site development.

"We could not be more pleased with the crew that Siemens Healthineers brought in here. The work is absolutely excellent, whether we are talking about training our people, keeping on schedule, or coordinating with the construction crew. It's just a great relief to know that it is all being managed."

Delores Gaiser
Manager, Cath Lab
Hennepin County Medical Center
Minneapolis, MN

Customizable Options

DCS Single-Point Process

Our Single-Point Process can do it all for you by delivering a customized construction solution, regardless of the complexity of your building program.

Whether your requirements include room modification, department planning, renovation, modular construction, or construction of an entirely new facility, you can outsource responsibility to our experts from start to finish.

Our Single-Point Process changes the nature of construction management. Since every task is tightly coordinated by the same organization, multiple steps can proceed concurrently. We can start working with you long before you've chosen your equipment, helping you identify and address potential site-specific construction issues—such as electrical and mechanical issues—up front, so you know exactly what must be done to accommodate your new equipment. The net result: your ability to focus on patient care and realize the clinical and revenue benefits of your new equipment sooner.

DCS Services that Complement Your In-House Resources

Many medical institutions prefer to rely on existing resources for key elements of the construction process. Our portfolio enables you to choose from a list of services that will best integrate your capabilities with ours—building the strongest possible team for your project while recognizing your budget constraints.

You can choose from our menu of consultative services to add value wherever you need it:

- Design
- Space planning
- Architecture
- Engineering
- Construction
- Construction management
- Modular building options

Our goal is to deliver the most strategic and cost-effective approach that meets all your key objectives.

Whether you choose Single-Point Process or only specific services, we have a proven track record of success. More than 98% of our projects have met their deadlines and budget goals.

Contact Our Design and Construction Services Today

If you are ready to begin a project or are in the earliest "needs assessment" stage, you can benefit from our expertise. We'd welcome an opportunity to discuss your project, your site, and your goals. To contact us, call your Account Executive from Siemens Healthineers today.

At Siemens Healthineers, our purpose is to enable healthcare providers to increase value by empowering them on their journey towards expanding precision medicine, transforming care delivery, and improving patient experience, all enabled by digitalizing healthcare.

An estimated 5 million patients globally benefit every day from our innovative technologies and services in the areas of diagnostic and therapeutic imaging, laboratory diagnostics and molecular medicine, as well as digital health and enterprise services.

We are a leading medical technology company with over 170 years of experience and 18,000 patents globally. With more than 48,000 dedicated colleagues in 75 countries, we will continue to innovate and shape the future of healthcare.

The outcomes and statements provided by customers of Siemens Healthineers are unique to each customer's setting. Since there is no "typical" hospital and many variables exist (e.g., hospital size, case mix, and level of service/technology adoption), there can be no guarantee that others will achieve the same results.

On account of certain regional limitations of sales rights and service availability, we cannot guarantee that all products included in this brochure are available through the Siemens Healthineers sales organization worldwide. Availability and packaging may vary by country and is subject to change without prior notice. Some/All of the features and products described herein may not be available in the United States.

The information in this document contains general technical descriptions of specifications and options as well as standard and optional features, which do not always have to be present in individual cases.

Siemens Healthineers reserves the right to modify the design, packaging, specifications, and options described herein without prior notice. For the most current information, please contact your local sales representative from Siemens Healthineers.
