Get more out of your data in radiology and cardiology

To advance digitalization in healthcare, teamplay is a departmental performance management cloud-based network that brings together healthcare professionals in a team effort. By connecting medical institutions and their imaging devices, teamplay provides its members with tools to tackle big data and the challenges of increasing cost pressure.

teamplay apps will help you make prompt and well-informed decisions by offering an intelligible overview of your performance data. To monitor quantities such as imaging throughput or dose levels, utilization of staff, rooms and resources of your whole department down to every device and procedure, simplifying your reporting and showing you where workflows need adjustments. It links you to other users of teamplay and their data to offer comparable bench-marks and an effortless exchange of images and reports with other healthcare providers. Get the teamplay apps to accelerate your clinical processes and to find the additional expert opinion you need – when you need it.

Effective scan protocol management

A multidisciplinary committee requires 57 person-hours at an estimated labor cost of \$12,488 for evaluation, protocol development and implementation¹⁾. What are your spendings?

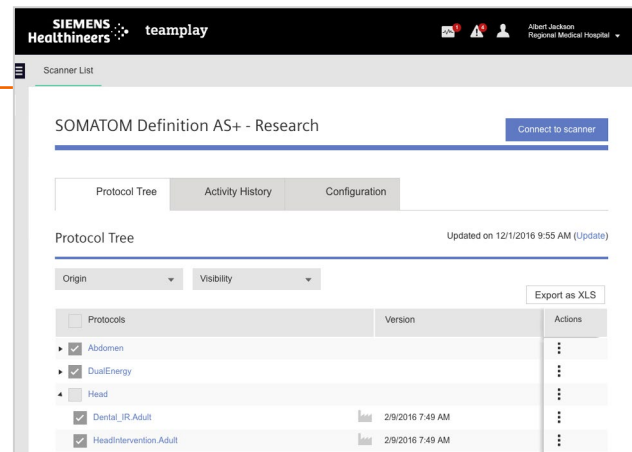

Explore the scan protocols

How do you identify best-practice examples among the multitude of different scan protocols installed in your imaging fleet?

All scan parameters in one place

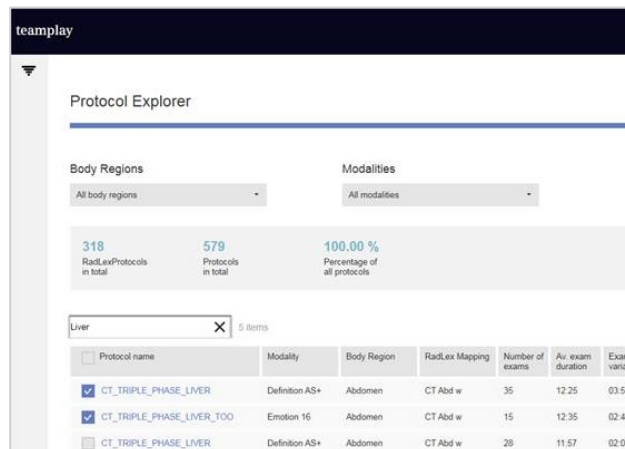

teamplay Protocols²⁾ provides an intuitive and easy way to manage scan protocols of your imaging fleet with the benefit from streamlined and remote protocol optimization across your fleet. Manage your protocols in one place and distribute them to Siemens Healthineers CT and MRI devices within your network. teamwork Protocols offers functionalities to track changes which are made in the scan protocols. Comments to adapted scan protocols can be added or reviewed to track why changes are performed. The analysis view can help to increase your quality control and quality assurance.

Reduce travel time and invest it in protocol standardization with centralized protocol management³⁾

Extensive enterprise wide protocol management

teamplay Protocols supports institutions in establishing a standardization process for scan protocols to ensure high quality of care and patient safety. teamwork Protocols facilitates standardization so that image impression, radiation dose values are consistent across the imaging fleet even at different locations within larger institutions or an Integrated Delivery Network. The new Protocol Explorer brings the possibility to compare scan protocols of multiple scanners and different types among the complete fleet of CT and PET/CT scanners.

Important facts

teamplay Protocols supports:

- Viewing and comparing scan protocol parameters of the entire CT and PET/CT fleet with the protocol Explorer
- Understanding what happened with the scan protocols at the CT and PET/CT in the change history view
- Distributing CT, PET/CT and MR protocols or protocol files to remote scanners
- Exact monitoring of radiation dose in a process of dose optimization with help of the analysis view

teamplay is designed to help you solve relevant painpoints. To find out how, click here:
