Benefits of Ultrasound for COVID-19

Ultrasound is a fast, simple and mobile clinical imaging solution available anytime without the use of harmful radiation. Lung ultrasound is strongly recommended for acute respiratory failure and can be a useful alternative during the COVID-19 outbreak.

Ultrasound imaging at the bedside may reduce cross contamination.

Easy disinfection may reduce sources of infection.

Battery-operated portable system is easily movable throughout ER, ICU, and disaster locations.

Ultrasound with ACUSON Freestyle

- Ability to identify abnormalities such as B-lines, consolidations and pleural effusion with curved and linear array transducers
- Cable-free, low profile design for easy disinfection
 - Reduces up to 92%¹ in sterile field preparation time and risk of infection
- Integrated transducer controls and automated preset optimization improve operational efficiency
- Scan with a wireless range up to 10 feet (3 meters) from the ultrasound system
- Fully immersible battery and transducer
 - Easy cleaning and disinfection
- Custom sterile transducer covers
