SIEMENS Healthineers

CONFORMANCE STATEMENT OVERVIEW

The ***syngo.*via View&GO** is lightweight reading software solution with connectivity to DICOM modalities and healthcare information systems. By default one ***syngo.*via View&GO** (**AE**) is used. It is possible to configure usage of multiple different AEs for the individual DICOM services.

The ***syngo.*via View&GO**:

- o requests storage of objects (images, reports, encapsulated PDF)
- o support query and retrieval of objects from a remote node
- o displays images to a user
- o imports objects from portable interchange media
- o exports objects to non-optical storage device (e.g. USB stick)

The ***syngo.*via View&GO** conforms to the DICOM Standard and supports the network services as described in Table 0-1 and the media services as described in Table 0-2.

1.2 GENERAL

The Conformance Statement describes the DICOM interface for the Siemens ***syngo.*via View&GO** in terms of DICOM Part PS3.2 2016a [1].

1.3 AUDIENCE

This document is intended for hospital staff, health system integrators, software designers or implementers. It is assumed that the reader has a working understanding of DICOM.

1.4 REMARKS

DICOM, by itself, does not guarantee interoperability. However, the Conformance Statement facilitates a first-level validation for interoperability between different applications supporting the same DICOM functionality as SCU and SCP, respectively.

This Conformance Statement is not intended to replace validation with other DICOM equipment to ensure proper exchange of information intended.

The scope of this Conformance Statement is to facilitate communication with Siemens and other vendors' medical equipment. The Conformance Statement should be read and understood in conjunction with the DICOM PS3.1-3.20 2016a Standard [1]. However, by itself it is not guaranteed to ensure the desired interoperability and a successful interconnectivity.

The user should be aware of the following important issues:

- The comparison of different conformance statements is the first step towards assessing interconnectivity.
- Test procedures should be defined and tests should be performed by the user to validate the connectivity desired. DICOM itself and the conformance parts do not specify this.
- The standard will evolve to meet the users' future requirements. Siemens is actively involved in developing the standard further and therefore reserves the right to make changes to its products or to discontinue its delivery.

Siemens reserves the right to modify the design and specifications contained herein without prior notice. Please contact your local Siemens representative for the most recent product information.

1.8 SCOPE AND FIELD OF APPLICATION

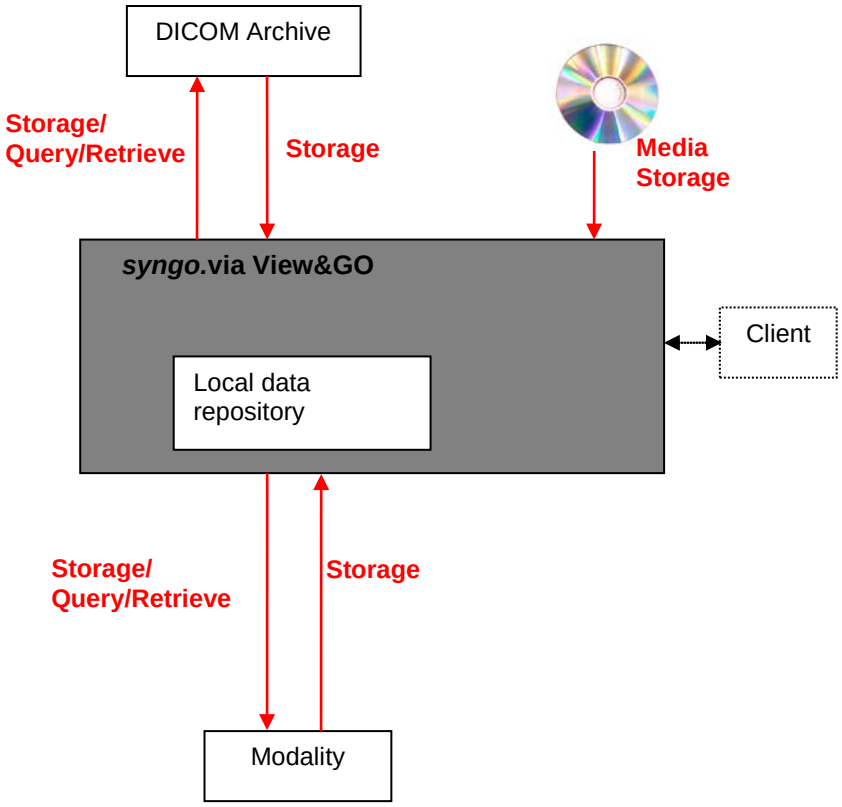

Figure 1.8-1: Overview about DICOM capabilities of *syngo.*via View&GO VA15A

2 NETWORKING

2.1 IMPLEMENTATION MODEL

2.1.1 Application Data Flow

The Application Data Flow diagram in Figure 2.1-1 depicts the DICOM data flow to and from the individual applications within ***syngo.*via View&GO**.

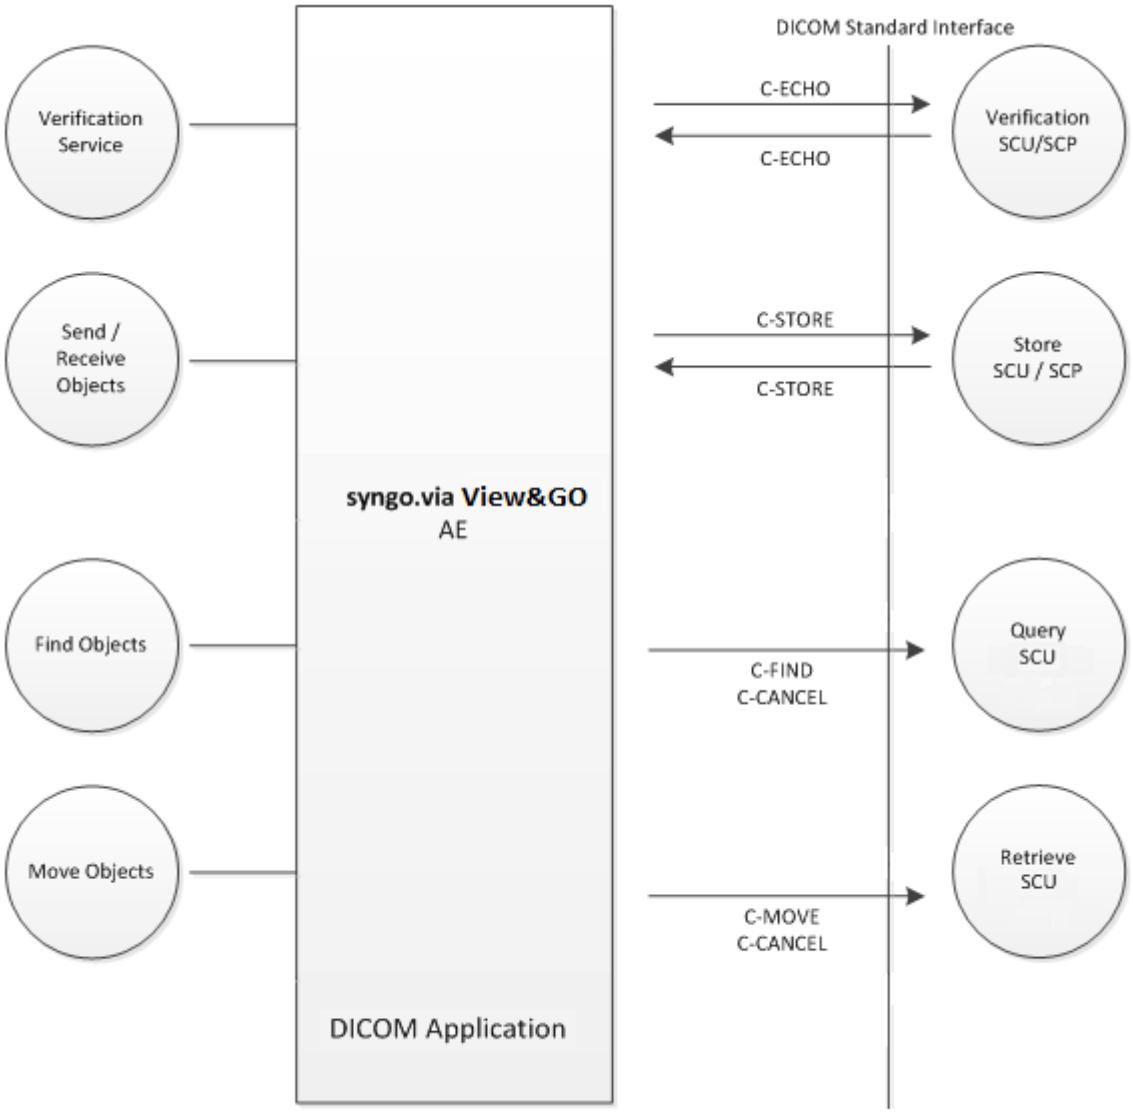

Figure 2.1-1: Application Data Flow Diagram

2.1.2 Functional Definition of AE's

The SCP components of the Application Entities of the ***syngo.*via View&GO** operate as background server processes. They exist as soon as soon as the application starts and wait for association requests. Upon accepting an association with a negotiated Presentation Context they start to receive and process the requests described in the following sections.

The SCU components of the Application Entity are invoked upon requests from the user interface or indirectly triggered from internal processes.

2.1.2.1 Verification

Verification requests (SCP) will be processed and responded by the ***syngo.*via View&GO** AE. The ***syngo.*via View&GO** AE can also initiate an association and request verification to a remote AE (SCU).

2.1.2.2 Storage

The ***syngo.*via View&GO** Storage SCU is invoked directly by the user, or by the Query/Retrieve Application Entity that is responsible for processing retrieve requests. The request consists of data describing the composite objects selected for storage and the destination AET. An association is negotiated with the destination AE and the image data is transferred using the DIMSE C-STORE-Service.

The ***syngo.*via View&GO** Storage SCP starts to receive the Composite Image Objects and import them into the database after accepting an association with a negotiated Presentation Context. The system responses to the Storage Request immediately after reception of the Data.

2.1.2.3 Storage Commitment

The ***syngo.*via View&GO** does not support Storage Commitment.

2.1.2.4 Query

The C-FIND request to the remote SCP is invoked directly by the user. The remote SCP returns a list of responses with matching the request which are displayed to the user. The user can decide to start retrieving any of the responses or to issue another query.

As an SCU ***syngo.*via View&GO** supports

- Study Root Query/Retrieve Information Model (FIND)
- Patient Root Query/Retrieve Information Model (FIND)
- Patient/Study Only Query/Retrieve Information Model (FIND)
- Furthermore the SCU services may issue relational queries, if supported by the SCP node and required by the querying Application.

2.1.2.5 Retrieve

The ***syngo.*via View&GO** initiates a C-MOVE request to the remote Retrieve SCP. The remote Retrieve SCP in turn starts C-STORE sub operations to the ***syngo.*via View&GO** Storage SCP.

As an SCP ***syngo.*via View&GO** supports

- Study Root Query/Retrieve Information Model (MOVE,GET)
- Patient Root Query/Retrieve Information Model (MOVE,GET)
- Patient/Study Only Query/Retrieve Information Model (MOVE,GET)

2.1.3 Sequencing of Real-World Activities

Verify:

The communication between ***syngo.*via View&GO** and an external DICOM node in case of Verify is depicted in Figure 2.1-2 in more detail.

Storage:

The communication between ***syngo.*via View&GO** and an external DICOM node in case of triggering the transfer or accepting storage requests is depicted in more detail.

Query and Retrieval:

The communication between ***syngo.*via View&GO** and an external DICOM node in case of querying of objects from a remote DICOM node and retrieval to ***syngo.*via View&GO** is depicted in Figure 2.1-4 in more detail.

2.2 AE SPECIFICATIONS

This section outlines the specifications for each of the Application Entities that are part of the ***syngo.*via View&GO** solution.

2.2.1 *syngo.*via View&GO AE

2.2.1.1 SOP Classes supported

This Application Entity provides Standard Conformance to the SOP Classes listed in Table 6-1 SOP CLASSES and

Table 6-2: Supported Non-Storage SOP Classes.

2.2.1.2 Association Establishment Policies

Table 2-1: Association Policies

Application Context Name	1.2.840.10008.3.1.1.1
PDU size	32 kB [1]
Maximum number of simultaneous associations as an association acceptor	12[1]
Maximum number of simultaneous associations as an association initiator	unlimited

The ***syngo*.via View&GO** AE contains a limitation of 512 kB for the maximum PDU size. By default, the maximum PDU size is set to 32kB.
The maximum number of simultaneous receiving associations (SCP) is configurable at run time, based on the system resources available. By default, the maximum number of associations is set to 12.
There is no inherent limit to the number of outgoing associations (SCU), other than limits imposed by the computer operating system. Nevertheless, transfer jobs to one distinct remote system (Send, Retrieve) will be run sequentially one after the other.

2.2.1.2.1 Asynchronous Nature

The ***syngo*.via View&GO** supports asynchronous communication (multiple outstanding transactions over a single association). On the SCU side the Window size proposed is infinite. On the SCP Side any non-infinite maximum size will be accepted.

Table 2-2: Asynchronous Nature as an Association Initiator

Maximum number of outstanding asynchronous transactions	Infinite

2.2.1.3.2.3 SOP specific Conformance for SOP classes

***syngo.*via View&GO** provides standard conformance to the Verification service SCU.

2.2.1.3.3 Activity "Send To"

2.2.1.3.3.1 Description and Sequencing of Activities

Storage of DICOM object is triggered internally in the ***syngo.*via View&GO**.

If an association to a remote Application Entity could successfully be established, each image will be transferred one after another via the same open association.

In case the transfer fails for a permanent reason (rejection permanent reported by SCP, all Presentation Contexts are refused, …) the transfer will not be retried.

2.2.1.3.3.2 Proposed Presentation Contexts

For all supported Transfer objects (see SOP Classes in Table 6-1) the following Transfer Syntaxes are supported:

Table 2-6: Proposed Presentation Contexts for Storage

UID value	Transfer Syntax	Type
1.2.840.10008.1.2.1	Explicit Value Representation Little Endian native	Image / non-image
1.2.840.10008.1.2	Implicit Value Representation Little Endian native	Image / non-image

1.2.840.10008.1.2.4.90	JPEG 2000 Image Compression (Lossless Only) compressed	Image
1.2.840.10008.1.2.5	RLE Lossless compressed	Image
1.2.840.10008.1.2.4.51	JPEG Extended (Process 2 & 4) lossy compressed	Image

- Photometric Interpretation (0028,0004) is MONOCHROME or RGB or YBR_FULL or YBR_FULL_422
- Bits Allocated (0028,0100) equal to 16'D or 8'D
- Bits Stored (0028,0101) equal to 12'D or 8'D

2.2.1.3.4 Activity "Querying a Remote Node" for Instances

2.2.1.3.4.1 Description and Sequencing of Activities

The associated Real-World activity is a C-Find request initiated by the user (see also Figure 2.1-4). The user specifies some attributes and will send a C-Find request (according to the query model) and will then return the results to the initiating application.

2.2.1.3.4.2 Proposed Presentation Contexts

The ***syngo.*via View&GO** will propose Presentation Contexts as shown in the following table:

The ***syngo.*via View&GO** supports the following query levels:

- Study

- Series

Matching Keys on Instance Level is not supported by ***syngo.*via View&GO** as SCU.

The following table lists the various attributes at Study and Series levels, which can be used for **hierarchical** queries as well as return values for display. The display capabilities are highly configurable and "yes" indicates that it is possible to configure display of the data:
A "yes" in the **UI** column will indicate that the attribute may be visualized when browsing the Query results with the Browser. The Browser display is additionally influenced by the related Browser configuration

2.2.1.3.5.3 SOP Specific Conformance Statement for Move SCU Classes

At association establishment time the C-MOVE presentation context shall be negotiated. When the C-MOVE-RQ is processed, the Move Destination attribute (receiver of images) is ignored. However the Move Destination AE must conform to the DICOM conventions (value representation AE).

The behavior of ***syngo.*via View&GO** when encountering status codes in a C-MOVE response is summarized in Table 2-15:

Table 2-15: DICOM Command Response Status Handling Behavior

Service Status	Further Meaning	Error Code	Behavior
Error	e.g. Out of Resources; Cancellation; Identifier does not match SOP Class; Unable to process; Move destination unknown	Any none null Code	Failure reported to user
Pending	Move Operation continues	FF00	Operation continues in

Table 2-16: DICOM Command Communication Failure Behavior

exception	Behavior
Timeout	Failure reported to user (Timeout configurable; default 30s)
Association Aborted	Failure reported to user

2.2.1.4 Association Acceptance Policy

The ***syngo.*via View&GO** attempts to accept a new association for

- DIMSE C-STORE

  service operations.

Generally associations are accepted if all of the following conditions are true:

- The "called AET" matches one of the configured Application Entity Titles of the ***syngo.*via View&GO**.
- The "calling AET" is known (configured) at ***syngo.*via View&GO**.
- The maximum number of incoming associations is not reached.
- At least one Presentation Context with a minimum of one suitable transfer syntax has been proposed as defined by the "Presentation Context Tables" in the following subsections.
- The system has enough available resources to perform the service requested (e.g. enough free disk space, less than the max. number of associations are already in use)

2.2.1.4.1 Activity "Verification"

2.2.1.4.1.1 Description and Sequencing of Activities

The ***syngo.*via View&GO** verification process will accept an association, receive ECHO request and send reply.

2.2.1.4.1.2 Accepted Presentation Contexts

Table 2-17: Acceptable Presentation Contexts for Verification Activity

Presentation Context Table					
Abstract Syntax		**Transfer Syntax**		**Role**	**Ext. Neg.**
Name	**UID**	**Name List**	**UID List**

		Explicit VR Little Endian	1.2.840.10008.1.2.1		
		Explicit VR Big Endian	1.2.840.10008.1.2.2		

2.2.1.4.1.3 SOP specific Conformance for SOP classes

***syngo.*via View&GO** provides standard conformance to the Verification service SCP.

2.2.1.4.2 Activity "Receive Instances"

2.2.1.4.2.1 Description and Sequencing of Activities

The ***syngo.*via View&GO** receiving process will accept C-STORE association requests, receive any objects transmitted on that association and store the objects on disk.

2.2.1.4.2.2 Accepted Presentation Contexts

For all supported Transfer objects (see SOP Classes in Table 6-1) the Transfer Syntaxes described in Table 2-6 are supported.

Generally all Presentation Contexts are accepted as long as they contain at least one suitable Transfer Syntax. All other Presentation Contexts are rejected.

There is no Extended Negotiation as an SCP

2.2.1.4.2.3 SOP-specific Conformance Statement for Storage SOP classes

The ***syngo.*via View&GO** conforms to the Full Storage Class at Level 2.

In case of a successful C-STORE operation, the image has successfully been received in either Explicit Little Endian format or in the compression format received.

***syngo.*via View&GO** AE returns the status "success" when the data is received and a minimal image header validation has been performed.

The following header attributes must be available and filled:

- SOP Class UID,
- Study Instance UID,
- Series Instance UID and
- SOP Instance UID.

Table 2-18: Storage C-STORE Response Status

Service Status	Further Meaning	Error Code	Reason
Success	success	0000	Image received correctly (success notification is done after receiving, before indexing and storing)
Failure	Out-of-resource	A700	No resource left in the Short Term Storage
Failure	Unable to Process	Cxxx	Error during instance reception

Failure	Data set does not match SOP Class	A9xx	The data set is not conform to the SOP Class contained in the resource.

Restriction: successful operation does not guarantee storage on disk and storage of header data in the database.

2.2.1.4.2.4 Other SOP specific behavior

- If an image is received that is already stored in the database - identified by the SOP Instance UID - the new image will be ignored. The existing instance is not superseded.

2.3 NETWORK INTERFACES

2.3.1 Physical Network Interface

The ***syngo.*via View&GO** provides DICOM 3.0 TCP/IP network communication support as defined in Part 8 of DICOM [1]. The network communication is independent from the physical medium over which TCP/IP executes; it inherits this from the Windows OS system upon which it executes.

2.3.2 Additional Protocols

none

2.3.3 IPv4 and IPv6 Support

IPv4 and IPv6 are supported. Regarding IPv6 please note, that the complete networking infrastructure in the hospital (firewalls, DNS-Servers, …) must support IPv6 in order to get a functioning communication.

2.4 CONFIGURATION

2.4.1 AE Title/Presentation Address Mapping

AE Titles shall be unique within the hospital. A common way to achieve that is to use the hostname as part of the AE Titles. The string can be up to 16 characters and must not contain any extended characters. Only 7-bit ASCII characters (excluding Control Characters) are allowed according to DICOM [1].

2.4.1.1 Local AE Titles

The ***syngo.*via View&GO** allows to configure AETitles, Ports any way. Default delivery is that all services are using the same AE title and only one port number.

Parameter	Configurable	Default Value
Default AE title	Yes	hostname in uppercase characters; limited to 16 characters
Default Port	Yes	104

2.4.1.2 Remote AE Title/Presentation Address Mapping

2.4.1.2.1 Remote Association Initiators

All relevant remote applications that may setup DICOM associations towards ***syngo.*via View&GO** need to be configured in ***syngo.*via View&GO**, before the association can be established. This behavior is configurable but it is recommended, not to change this behavior.

The mapping of external AE Titles to TCP/IP addresses and ports is configurable. The Application Entity Titles and supported transfer syntaxes need to be known for configuration.

To enable a fast and efficient configuration possibility Siemens will deliver templates for known configuration examples, so that the behavior (usage of one AE title, default port numbers, supported services) is determined already through the template.

Remote Application Entities can be configured without restarting the process.

2.4.1.2.2 Remote SCP's

For remote applications that shall be able to accept DICOM associations from ***syngo.*via View&GO**, the following information needs to be available:

- Application Entity Title
- Host Name / IP address on which the remote application service runs
- Port number on which the remote application accepts association requests.

The remote system will be indicated in the UI of ***syngo.*via View&GO** with a logical name that is also entered when configuring the node in the configuration UI.

To enable a fast and efficient configuration possibility Siemens will deliver templates for known configuration examples, so that the behavior (usage of one AE title, default port numbers, supported services) is determined already through the template.

Remote Application Entities can be configured without restarting the process.

3 MEDIA INTERCHANGE

3.1 IMPLEMENTATION MODELS

3.1.1 Application Data Flow Diagram

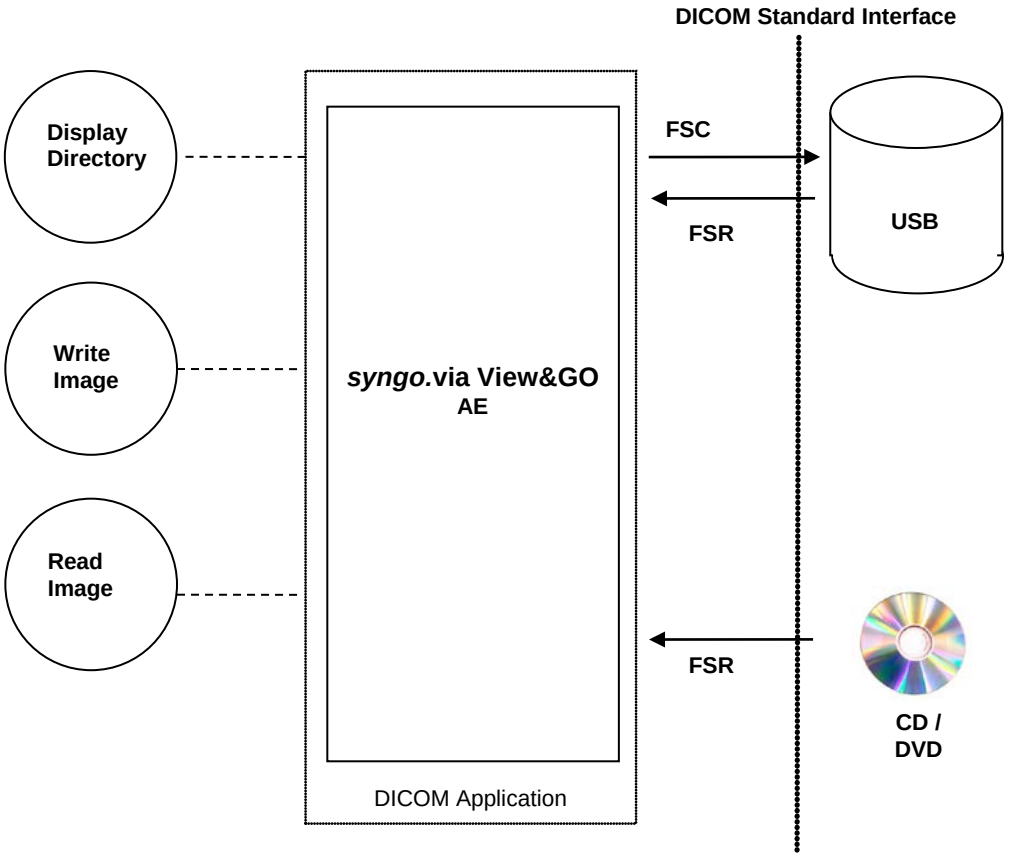

Figure 3.1-1: Media Interchange Application Data Flow Diagram

The ***syngo*.via View&GO** provides the functionality to Import or Export DICOM Instances from and to the File System. During export, a DICOMDIR may also be generated (user selection). All SOP Classes defined in Table 3-3 and Table 3-4 are supported for the Import/Export functionality.

3.1.2 Functional definitions of AEs

The ***syngo.*via View&GO** application is capable of

- creating a new File-set in the File System (Export to ...)
- importing SOP Instances from the medium onto local storage
- writing the File-sets DICOMDIR information into the file system

3.1.3 Sequencing of Real-World Activities

Whenever data is written to an external media, ***syngo.*via View&GO** a DICOMDIR may be created for the selected data.

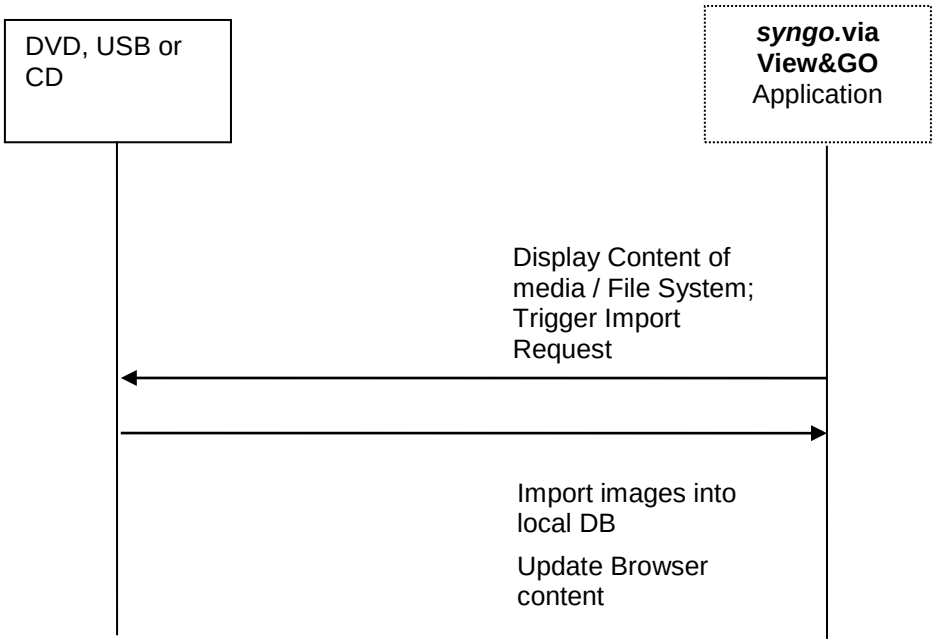

Figure 5.1-3: Sequence diagram – Media import

3.1.4 File Meta Information for Implementation Class and Version

This section describes the values assigned to the File Meta Information attributes (see DICOM [1] part PS 3.10) that pertain to the Implementation Class and Version. The implementation Class UID and the Implementation Version name in the File Meta Header are the same as the values specified for networking.

3.2 AE SPECIFICATIONS

3.2.1 Media Storage AE – Specification

The ***syngo.*via View&GO** provides conformance to the following Application Profiles as an FSR. FSC and FSU are supported only on a non-optical storage device (e.g. USB stick).

In addition augmented conformance is provided to store extra data attributes important for the full feature support of the ***syngo***®-based products. Details are listed below:

Table 3-2: Media - Application Profiles and Real-World Activities

Application Profiles Supported	Real-World Activity	Role	Service Class Option

STD-GEN-USB-J2K	Browse Directory Information Import into Application Export to local Archive Media	FSR , FSC , FSU	

3.2.1.1 Real-World Activities

3.2.1.1.1 Activity "Browse Directory Information"

The ***syngo.*via View&GO** acts as FSR using the interchange option when requested to read the media directory.

The ***syngo.*via View&GO** will read the DICOMDIR and insert those directory entries that are valid for the application profiles supported, into a local database. The database then is used for browsing media contents.

Note: The "Icon Image Sequence" is also supported in DICOMDIR. But only those Icon Images with "Bits Allocated" (0028,0100) equal to 8 and size of 64x64 or 128x128 pixels are imported into database and are visible in the Browser.

3.2.1.1.1.1 Media Storage Application Profiles

See Table 3-2 for the Application Profiles listed that invoke this Application Entity for the Browse Directory Information

3.2.1.1.2 Activity "Import into Application"

The ***syngo.*via View&GO** application acts as FSR using the interchange option when requested to read SOP Instances from the medium into the application.

The SOP Instance selected from the media directory will be copied into the running Application. Only SOP Instances, that are valid for the application profile supported and supported by ***syngo.*via View&GO** (see Table 6-1), can be retrieved from media.

3.2.1.1.3 Media Storage Application Profiles

See Table 3-2 for the Application Profiles listed that invoke this Application Entity for the local Archive Media Real-World Activity.

3.2.1.2 SOP Classes and Transfer Syntaxes

These Application Profiles are based on the Media Storage Service Class with the Interchange Option. In the table below (Table 3-3) the Transfer Syntax UID “RLE Lossless “only applies for decompression.

3.5 Attribute confidentiality profiles

3.5.1 De-identification

The ***syngo.*via View&GO** application can de-identify attributes. During export to file system it is the user responsibility to select anonymization.
For anonymization private attributes are not included in anonymized Studies.

The following table contains the attributes that are anonymized:

Table 4-4: Multi-Byte Character Sets with Code Extension

Character Set Description	Defined Term	Standard for Code Extension	ESC sequence	ISO registration number	Character Set
Japanese	ISO 2022 IR 159	ISO 2022	ESC 02/04 02/08 04/04	ISO-IR 159 ISO-IR 87	JIS X 0212: Supplementary Kanji set
Korean	ISO 2022 IR 149	ISO 2022	ESC 02/04 02/09 04/03	ISO-IR 149	KS X 1001: Hangul and Hanja

All Specific Character Set listed above are supported for incoming Data. When creating new Instances, the system will use the default SCS (or SCS List) configured on the machine.

When there is a mismatch between the given character set in attribute (0008,0005) and the characters in an IOD received by the system, then the following measures are taken to make the characters DICOM conform:

- Convert each illegal character to a '?'.

There are now three categories of character sets which have to be differentiated because of their different encoding formats:

- Conventional ISO character sets: ISO_IR 6, ISO 2022 IR 6, ISO_IR 100, etc. → encoded in ISO 2022
- ISO_IR 192 → encoded in UTF-8
- GB18030 → encoded in GB18030

It is not possible to recognize the following mismatches automatically on receiving or importing:

- An attribute value is encoded in ISO_IR 192 ←→ (0008,0005) contains a conventional ISO character set as primary character set
- An attribute value is encoded in GB18030 ←→ (0008,0005) contains a conventional ISO character set as primary character set
- An attribute value is encoded in ISO 2022 ←→ (0008,0005) contains ISO_IR 192
- An attribute value is encoded in ISO 2022 ←→ (0008,0005) contains GB18030

An IOD that contains one of the above mentioned inconsistencies is not DICOM conform. As these kinds of inconsistencies cannot be recognized by the system, the IOD will not be rejected but the character data might be corrupted.

The ***syngo*.via View&GO** supports Kanji characters in the byte zones after 74 (79, 7A, 7B and 7C).
