Dear {Name of Referring Physician},

Providing you with the right high-quality clinical information you need is our central focus.

We know that this kind of information, when delivered quickly, can help you effectively care for your patients and enhance patient satisfaction. That's why we recently acquired a Symbia® Intevo SPECT/CT system.

How our SPECT/CT system can impact your practice

Designed to provide you with exceptionally high image quality, the Symbia Intevo combines high SPECT sensitivity and outstanding reconstructed resolution with high-performance CT. This gives you fast, high-quality functional information and diagnostic-quality CT for attenuation correction and localization—*all in one exam.*

Why high-quality SPECT/CT matters to your patients

The Symbia Intevo can reveal critical details that result in meaningful improvements in the quality of patient care you provide. Avoid unnecessary delays in patient care with one exam that combines functional and anatomical imaging. You'll have a more complete picture of your patient's condition—resulting in improved clinical confidence, more efficient care, and better patient satisfaction.

Patients who often receive the most value

High-quality SPECT/CT imaging can be particularly helpful for cases involving:

- Oncology
- Cardiology
- Endocrinology
- Orthopedics
- Parathyroid
- Osteomyelitis
- Obese patients
- Pediatrics

For more information about our new system and how it may help your patients, please contact us at <<phone number>> or visit <<facility website address or Siemens website address>>.

Best wishes,
<<Facility name>>
