diagnostics across diverse clinical environments

HMI Medical today announced the expansion of its radiology services with the opening of HMI Radiology (Novena), a new centre offering a full suite of diagnostic imaging services, including both advanced and basic modalities. The facility complements HMI's existing HMI Radiology (Farrer Park) location.

Situated within Royal Square Novena, at the heart of Singapore's Novena Medical Hub, HMI Radiology (Novena) enhances access to advanced diagnostics in a convenient outpatient setting.

The center is equipped with advanced imaging technologies including the MAGNETOM Lumina 3T MRI, SOMATOM Drive CT, MAMMOMAT Revelation, and MULTIX Impact X-ray, providing patients with faster, quieter, and more comfortable imaging experiences.

Notably, the MAGNETOM Lumina 3T MRI offers a more comfortable and efficient scanning experience compared to traditional systems, producing high-resolution images that enable clinicians detect health issues with greater accuracy, while reducing scan times and enhancing patient comfort.

The management of HMI Medical and Siemens Healthineers at the HMI Radiology center opening on 18 October.

HMI Radiology (Novena) will also offer interventional radiology services, providing image-guided biopsy services that ensure minimally invasive, precise tissue sampling to support accurate diagnoses for common medical conditions.

Dr Walter Lim, CEO of HMI Singapore, said, “With the growing emphasis on strengthening healthcare beyond the hospital setting, we are excited to expand HMI Radiology services and provide greater access to affordable advanced imaging within the community.” He added, “To support early detection, accurate diagnosis, and integrated patient care, the centre is equipped with the latest technologies, reflecting the value of our ongoing strategic partnership with Siemens Healthineers.”

“This collaboration with HMI Medical Centre reflects our shared vision to make advanced healthcare more accessible and efficient,” said Ms. Siow Ai Li, Managing Director for Singapore, Malaysia, and Brunei, Siemens Healthineers. “By integrating our most advanced imaging solutions and AI-powered tools, we empower clinicians to achieve greater diagnostic precision and improving patients’ overall experience.”

The facility’s advanced imaging technologies are supported by a strategic partnership between HMI Medical and Siemens Healthineers, a collaboration that extends across the Group’s hospitals and medical centres in Singapore and Malaysia. This partnership enables HMI to continually strengthen its diagnostic capabilities, adopt digital innovations, and consistently deliver high-quality care across its network, reinforcing its commitment to preventive health and better patient outcomes.
