## Table of Contents

# 1. Introduction

## 1.1 Overview

The Conformance Statement describes the DICOM interface for the Siemens Oncology Products in terms of part 2 of [1].

This introduction describes the application's implemented DICOM functionality in general terms.

## 1.2 Scope and Field

The COHERENCE is a "*syngo*®-speaking[a]" Imaging and planning modality or workstation. The COHERENCE Workstations are designed to be integrated into an environment of medical DICOM-based devices. The COHERENCE DICOM network implementation acts as SCU and SCP for the DICOM Storage, Storage Commitment and Query/Retrieve services and as SCU for the DICOM Print, DICOM Basic Worklist and Modality Performed Procedure Step Services. Verification is supported in SCU (only via Service environment) and SCP role. Furthermore the handling of [CD/MOD] offline media is supported as a FSC, FSU and FSR.

This DICOM Conformance Statement refers to SIEMENS COHERENCE products and the PRIMEVIEW 3i product using syngo® software. The following table relates product names to SIEMENS products:

| Software Name | SIEMENS *syngo*-based  Product |
|---|---|
| Therapist 2.1 Workspace | COHERENCE Therapist |
| Oncologist 2.0 Workspace | COHERENCE Oncologist |
| Dosimetrist 2.2 Workspace | COHERENCE Dosimetrist |
| Physicist 1.0 Workspace | COHERENCE Physicist |

## 1.3 Audience

This document is intended for hospital staff, health system integrators, software designers or implementers. It is assumed that the reader has a working understanding of DICOM.

## 1.4 Remarks

DICOM, by itself, does not guarantee interoperability. However, the Conformance Statement facilitates a first-level validation for interoperability between different applications supporting the same DICOM functionality as SCU and SCP, respectively.

This Conformance Statement is not intended to replace validation with other DICOM equipment to ensure proper exchange of information intended.

The scope of this Conformance Statement is to facilitate communication with Siemens and other vendors' Medical equipment. The Conformance Statement should be read and understood in conjunction with the DICOM 3.0 Standard [1]. However, by itself it is not guaranteed to ensure the desired interoperability and a successful interconnectivity.

The user should be aware of the following important issues:

1. The comparison of different conformance statements is the first step towards assessing interconnectivity between Siemens and non-Siemens equipment.

2. Test procedures should be defined and tests should be performed by the user to validate the connectivity desired. DICOM itself and the conformance parts do not specify this.

3. The standard will evolve to meet the users' future requirements. Siemens is actively involved in developing the standard further and therefore reserves the right to make changes to its products or to discontinue its delivery.

4. Siemens reserves the right to modify the design and specifications contained herein without prior notice. Please contact your local Siemens representative for the most recent product information.

## 1.5 Definitions, Terms and Abbreviations

Definitions, terms and abbreviations used in this document are defined within the different parts of the DICOM standard.

Additional Abbreviations and terms are as follows:

| | |
|---|---|
| ACR | American College of Radiology |
| AE | DICOM Application Entity |
| ASCII | American Standard Code for Information Interchange |
| CSE | Customer Service Engineer |
| DB | Database |
| DCS | DICOM Conformance Statement |
| DSA | Digital Subtraction Angiography |
| IIDC | Image-Intensifier Distortion Correction |
| IOD | DICOM Information Object Definition |
| ISO | International Standard Organization |
| NEMA | National Electrical Manufacturers Association |

Optional Key Attribute

| | |
|---|---|
| PDU | DICOM Protocol Data Unit |
| R | Required Key Attribute |
| RIS | Radiology Information System |
| RWA | Real-World Activity |
| SCU | DICOM Service Class User (DICOM client) |
| SCP | DICOM Service Class Provider (DICOM server) |
| SOP | DICOM Service-Object Pair |
| U | Unique Key Attribute |

## 1.7 Structure

This Conformance Statement is subdivided into multiple Parts, which relate to individual documents needed to declare Conformance according to the requirements of "Part 2 - Conformance" of the DICOM Standard.

Those parts are:

- "Network Conformance Statement" for Network related Services

  - Storage - User/Provider (includes Verification - User/Provider)

  - Storage Commitment - User/Provider

  - Query/Retrieve - User/Provider

  - Basic Grayscale/Color Print - User

  - Basic Worklist - User

  - Modality Performed Procedure Step - User

- A privately defined "Media Conformance Statement"

- and the "Offline Media Conformance Statement" to support local archive media.

- A general Appendix.

# 2. Implementation Model Verification

The COHERENCE DICOM Service Tool application requests Verification to verify the ability of a foreign DICOM application on a remote node to respond to DICOM messages.

Responding to Verification requests from remote nodes is handled by the Storage SCP application.

## 2.1 Application Data Flow Diagram

The COHERENCE DICOM network implementation acts as SCU for the C-ECHO DICOM network service. The product target Operating System is Microsoft Windows XP Professional with Service Pack 1.

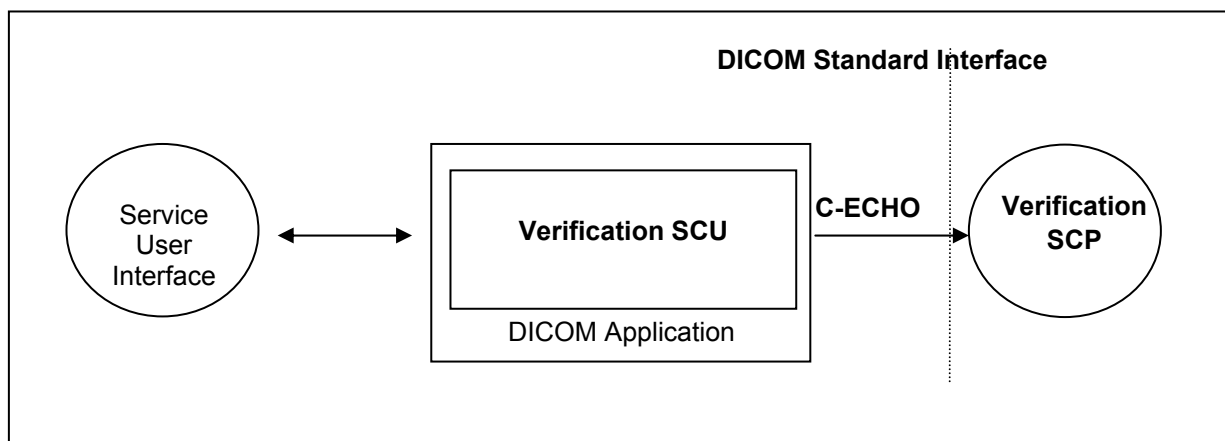

*Figure 1.    Application Data Flow Diagram - Verification SCU*

## 2.2 Functional Definitions of Applications

The COHERENCE DICOM Service Tool application opens an association when a "verification" of a remote application is requested during a configuration session. This can be done when entering new data for remote application configuration or to verify existing configuration data.

## 2.3 Sequencing of Real-World Activities

Newly entered data have to be saved first, before a "verification" of these data is possible.

# 3. Application Entity Specification Verification

## 3.1 Verification AE Specification

## 3.1.1 Association Establishment Policies

## 3.1.1.1 General

The COHERENCE DICOM Service Tool application attempts to open an association for verification request whenever the "verification" function is activated during network configuration of a remote DICOM application.

### 3.1.1.2    Number of Associations

The COHERENCE DICOM Service Tool application initiates one association at a time to request verification.

### 3.1.1.3    Asynchronous Nature

The COHERENCE DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

### 3.1.1.4    Implementation Identifying Information

| COHERENCE product | Implementation Class UID | Implementation Version Name |
|---|---|---|
| Dosimetrist v2.2 | 1.3.12.2.1107.5.9.20000101 | SIEMENS_SWFVE10B |
| *Other* | 1.3.12.2.1107.5.5.9.20010101 | SIEMENS_SWFVD20L |

## 3.1.2  Association Initiation Policy

The COHERENCE DICOM Service Tool application attempts to initiate a new association for

-    DIMSE C-ECHO

service operations.

### 3.1.2.1    Associated Real-World Activity - Verification

### 3.1.2.1.1 Associated Real-World Activity – Request Verification "verification"

The associated Real-World activity is a C-ECHO request initiated by Service and Configuration SW environment whenever a "verification" is requested. If an association to a remote Application Entity is successfully established, Verification with the configured AET is requested via the open association. If the C-ECHO Response from the remote Application contains a status other than "Success" this will be indicated in the service environment and the association is closed.

### 3.1.2.1.2 Proposed Presentation Contexts

The COHERENCE DICOM application will propose Presentation Contexts as shown in the following table:

| Presentation Context Table – Verification SCU | | | | | |
|---|---|---|---|---|---|
| Abstract Syntax | | Transfer Syntax | | | Extended Negotiation |
| Name | UID | Name List | UID List | Role | |
| Verification | 1.2.840.10008.1.1 | Implicit VR Little Endian<br>Explicit VR Big Endian<br>Explicit VR Little Endian | 1.2.840.10008.1.2<br>1.2.840.10008.1.2.2<br>1.2.840.10008.1.2.1 | SCU | None |

*Table 1.        Presentation Context Table – Verification*

### 3.1.2.1.3 SOP Specific Conformance – Verification SCU

The Application conforms to the definitions of the Verification SCU in accordance to the DICOM Standard.

## 3.1.3  Association Acceptance Policy

The Verification SCP is part of the Storage SCP – see section 5.1.3.

# 4. Implementation Model Storage

The COHERENCE DICOM Application Entity both originates associations for Storage of DICOM Composite Information Objects in Remote Application Entities and accepts association requests for Storage from Remote Application Entities.

## 4.1    Application Data Flow Diagram

The COHERENCE DICOM network implementation acts as SCU and SCP for the C-STORE DICOM network service and as SCP for the C-ECHO DICOM network service. The product target Operating System is Microsoft Windows XP Professional with Service Pack 1.

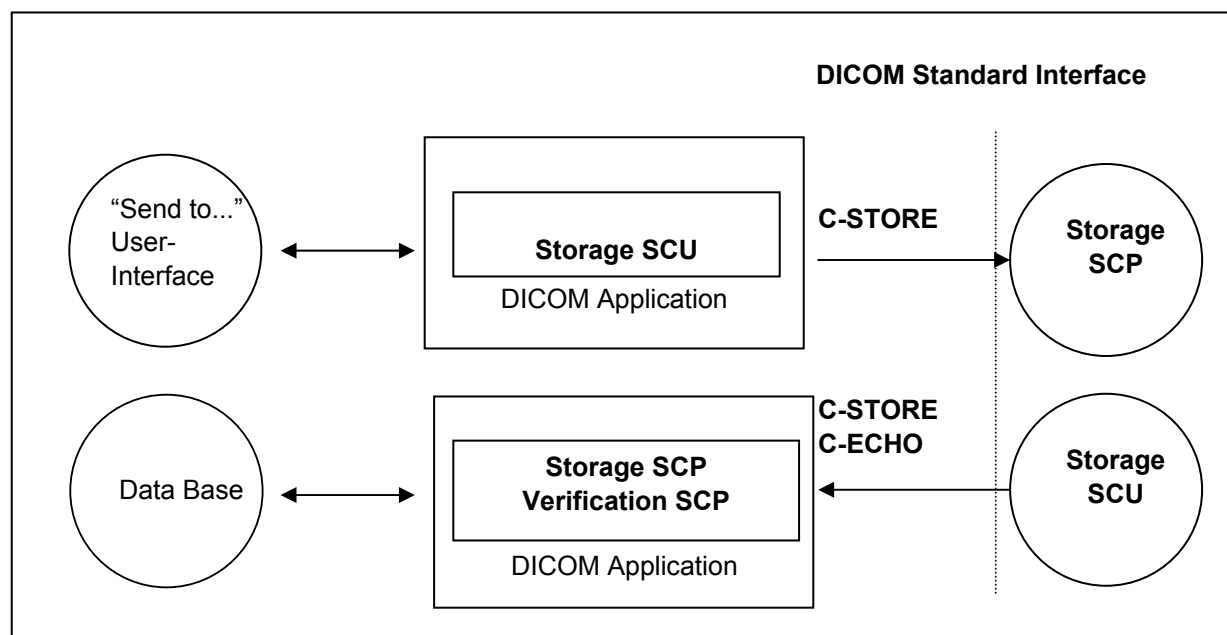

*Figure 2.      Application Data Flow Diagram – Storage SCU/SCP*

## 4.2    Functional Definitions of Application Entities

The Storage SCU is invoked by the job control interface that is responsible for processing network archival tasks. The job consists of data describing the Composite Information Objects selected for storage and the destination. An association is negotiated with the destination application entity and the image data is transferred using the C-STORE DIMSE-Service. Status of the transfer is reported to the job control interface.

The Storage SCP component of the COHERENCE DICOM application is operating as background server process. It is existing when the machine is powered on and waits for Storage association requests. Upon accepting an association with a negotiated Presentation Context it starts to receive the Composite Information Objects and imports them to local database. Verification requests will be processed and responded by Storage SCP component too.

## 4.3    Sequencing of Real-World Activities

Not applicable.

# 5. Application Entity Specification Storage

## 5.1    Storage AEs Specification

The COHERENCE Storage service class user/service class provider applications use one AE when initiating/receiving associations to/from remote DICOM nodes.

*Table 5.        Private SOP Classes as Storage SCP*

## 5.1.1  Association Establishment Policies

### 5.1.1.1     General

The existence of a job queue entry with network destination or an internal trigger from processing a retrieve request will activate the DICOM Storage Application. An association request is sent to the destination AE and upon successful negotiation of a Presentation Context the transfer is started.

The default PDU size used will be 28 KB.

### 5.1.1.2     Number of Associations

The COHERENCE DICOM application initiates several associations at a time, one for each destination to which a transfer request is being processed in the active job queue list.

The COHERENCE DICOM application is able to accept multiple associations at a time. It can handle up to 10 associations in parallel.

The number of Simultaneous DICOM associations can be configured via the Service-UI. The dialog can be found in Configuration / DICOM / General.

### 5.1.1.3 Asynchronous Nature

The COHERENCE DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

### 5.1.1.4 Implementation Identifying Information

| COHERENCE product | Implementation Class UID | Implementation Version Name |
|---|---|---|
| Dosimetrist v2.2 | 1.3.12.2.1107.5.9.20000101 | SIEMENS_SWFVE10B |
| *Other* | 1.3.12.2.1107.5.5.9.20010101 | SIEMENS_SWFVD20L |

### 5.1.2 Association Initiation Policy

If a job with network destination gets active in the job list or a retrieve sub-operation is processed the COHERENCE DICOM application attempts to initiate a new association for

- DIMSE C-STORE

service operations.

### 5.1.2.1 Associated Real-World Activity - Send

### 5.1.2.1.1 Associated Real-World Activity – Send Information Objects to a Network

### Destination

The associated Real-World activity is a C-STORE request initiated by an internal daemon process triggered by a job with network destination or the processing of an external C-MOVE retrieve request. If the process successfully establishes an association to a remote Application Entity, it will transfer each object one after another via the open association. If the C-STORE Response from the remote Application contains a status other than "Success" or "Warning", the association is aborted.

### 5.1.2.1.2 Proposed Presentation Context – Send Information Objects

The COHERENCE DICOM application will propose Presentation Contexts as shown in the following table:

*Table 6.        Initiation Presentation Context - Storage*

**\*1:** The Transfer Syntax used is strongly influenced by the fact of "how was the accepted Transfer Syntax at the time when the Instance was received". E.g. the Instances received with JPEG Lossy Transfer Syntaxes will not be converted and can only be sent out with the same Transfer Syntax.

**Note:**    The proposed Transfer Syntax is highly restricted for images stored internally in lossy compressed format. E.g. instances received with JPEG Loss Transfer Syntaxes will not be converted and can only be sent out with the same Transfer Syntax.

The "MOVE destinations" must be configured as Storage destinations. This would include the configuration of Transfer Syntax capabilities.

Not all the listed transfer syntaxes will be proposed all the time. For some abstract syntaxes only a list of uncompressed (UC) transfer syntaxes (one or more) will be proposed, for other abstract syntaxes also JPEG Loss less (LL) syntax will be proposed and/or a list of JPEG Lossy (LY) transfer syntaxes. The contents of this lists is configurable, e.g. UC could be configured to contain only Implicit Little Endian for instance.

Depending on the real world activity initiating the C-STORE, we have the following behaviors:

- If the C-STORE is initiated by a user, a configuration parameter called Quality Factor (Q) will be used to decide which transfer syntax lists will be proposed. Q can take values between 0 and 100. If Q=0, only UC will be proposed. If Q = 100, UC and LL will be proposed. Else UC and LY will be proposed.

- If the C-STORE is initiated by the C-MOVE SCP, there is another configuration parameter called Compression Types Supported (CTS) which will be used to decide what transfer syntaxes are proposed. CTS can take integer values. If CTS=0 or CTS > 3, UC will be proposed. If CTS=1, UC and LY will be proposed.  If CTS = 2, UC and LL will be proposed. If CTS >= 3, UC, LL and LY will be proposed.

The compression types JPEG lossy and JPEG loss less are parameters, which are part of the Application Entity Properties configuration (storage checked). It can by reached via the Service-UI: Configuration / DICOM / Network nodes

### 5.1.2.1.3    SOP specific Conformance to Storage SOP classes

The COHERENCE applications will create SC IOD type images when performing special applications that create Derived Images. The SC IOD will be a Standard Extended SC Storage SOP Class. The 3D viewing application is able to create further 2D (SC) images to document results from 3D processing.

The COHERENCE (DICOM) application will not change private attributes as long as no modification is done. During a "Save as ..." operation all private attributes not defined within the COHERENCE DICOM application will be removed when the new object instance is created.

For association and DIMSE level time-outs, please refer to Configuration section of this document.

#### 5.1.2.1.3.1    Optional Attributes

Data Dictionary of DICOM Type 2 and 3 IOD Attributes

Please see the related Information Object definition tables in the Annex for a list of all DICOM IOD attributes of type 2 and 3, which are encoded by the COHERENCE applications.

#### 5.1.2.1.3.2    Specialized Information Object Definitions

The DICOM objects created by COHERENCE DICOM application conform to the DICOM IOD definitions (Standard extended IODs). But they will contain additional private elements, which have to be discarded by a DICOM system when modifying the object.

The DICOM nodes are responsible for data consistency when modifying objects. All unknown private attributes have to be removed upon modification!

Data Dictionary of applied private IOD Attributes

Please see "A.2" in the Annex for a list of possible private IOD attributes

### 5.1.3    Association Acceptance Policy

The COHERENCE DICOM application attempts to accept a new association for

- DIMSE C-ECHO

- DIMSE C-STORE

service operations. Any Information Objects transmitted on that association will be checked on conformance and stored in database if check was successful.

### 5.1.3.1    Associated Real-World Activity - Receive

### 5.1.3.1.1    Associated Real-World Activity – Receiving Objects from a Remote Node

The daemon receiving process will accept an association and will receive any images transmitted on that association and will store the objects on disk in the own database if the conformance check is performed successfully.

## 5.1.3.1.2    Accepted Presentation Context – Receiving Objects

The COHERENCE DICOM application will accept Presentation Contexts as shown in the following table:

*Table 7.        Acceptable Presentation Contexts -Storage*

**\*1)** US Retired and US Multi-frame Retired images are converted to US Images/US Multi-frame images before storing them into the local database. The conversion creates new images, which implies new UIDs.

**Note:** With RLE Lossless Transfer Syntax the DICOM application will decompress the image before storing it into the database.

## 5.1.3.1.3    SOP-specific Conformance Statement – Receiving Objects

The COHERENCE DICOM application conforms to the Full Storage Class at Level **2**.

Upon successful receiving a C-STORE-RQ, the Siemens COHERENCE DICOM receiver performs a quick plausibility test on the received object and available system resources. If this test succeeds, it returns the status SUCCESS , otherwise one of the following status codes is returned and the association is aborted:

Refused (A700):
This error status indicates a lack of Resources (e.g. not enough disk space) on the COHERENCE modality.

Invalid Dataset (0xA900):
The dataset is not containing one of the Attributes "Study Instance UID", "Series Instance UID" or "SOP Instance UID", or one of them has an invalid value.

Processing Error (0110):
An error occurred while processing the object, which makes it impossible to proceed

**Attention!** Only after sending the response, the object will be saved into the database. If during this operation an error occurs, the association will be aborted. This implies that a C-STORE-RSP with status SUCCESS does not mean that the image was successfully stored into the database.

In order to confirm that the sent images where successfully stored in the database, the sending application should use Storage Commitment Service.

If an object instance is received that is identified by a SOP Instance UID which is already used by an Instance stored in database then the actual received object will be discarded. The existing Instance is not superseded.

The following sections will differentiate the attribute contents required for Image Viewing. The COHERENCE DICOM application supports more formats for Storage of Images than Viewing.

### 5.1.3.1.3.1   Image Pixel Attribute Acceptance Criterion for Grayscale Images - Viewing

The COHERENCE Multi-Modality Viewing application accepts the MONOCHROME1 and MONOCHROME2 photometric interpretation pixel format and graphic overlay with unsigned integer and 8 or 16 bits allocated. Accepted values:

- Pixel plane

  - samples per pixel (attribute 0028, 0002) = 1

  - photometric interpretation (attribute 0028,0004) = "MONOCHROME1"

  - photometric interpretation (attribute 0028,0004) = "MONOCHROME2"

  - pixel representation (attribute 0028, 0103) = 0

  - bits allocated (attribute 0028, 0100) = 8, 16

  - bits stored (attribute 0028,0101) = 8, 10, 12

  - high bit (attribute 0028,0102) = 7, 9, 11

  - only aspect ratio 1:1 is supported

- Overlay plane

  - overlay type (attribute 60xx, 0040) = "G"

  - bits allocated (attribute 60xx, 0100) = 16

  - bit position (attribute 60xx, 0102) = 12, 13, 14, 15 (only bits above high bit permitted)

  - Graphic Overlay will be shifted to fill Overlay Planes from Bit 12 and consecutive.

- Overlay plane

  - overlay type (attribute 60xx, 0040) = "G"

  - bits allocated (attribute 60xx, 0100) = 1

  - bit position (attribute 60xx, 0102) = 0

  - overlay data (attribute 60xx, 3000) = supported

The COHERENCE Multi-Modality Viewing application accepts also the MONOCHROME1 and MONOCHROME2 photometric interpretation pixel format with binary 2's complement integer and 16 bits allocated. Accepted values:

- Pixel plane

  - samples per pixel (attribute 0028, 0002) = 1

- photometric interpretation (attribute 0028,0004) = "MONOCHROME1"

- photometric interpretation (attribute 0028,0004) = "MONOCHROME2"

- pixel representation (attribute 0028, 0103) = 1 (signed)

- bits allocated (attribute 0028, 0100) = 16

- bits stored (attribute 0028,0101) = 16

- high bit (attribute 0028,0102) = 15

- only aspect ratio 1:1 is supported

- Overlay plane

  - overlay type (attribute 60xx, 0040) = "G"

  - bits allocated (attribute 60xx, 0100) = 1

  - bit position (attribute 60xx, 0102) = 0

  - overlay data (attribute 60xx, 3000) = supported

  - For MOD LUT, both the linear LUT (Rescale Slope/Intercept) and the MOD LUT SQ are supported and considered when pixel data is displayed. However there are two limitations. The MOD LUT SQ will be ignored in the following cases:

- 8-Bit signed pixels

- the pixel format is changed by the MOD LUT (e.g. 8bit -> 16bit)

If the MOD LUT SQ contains multiple LUTs, then only the first one is used.

For VOI LUT, both the linear LUT (Window Center/Width) and the VOI LUT SQ are supported (VOI LUT SQ with 8 or 16 bit LUT data)

But if both, a VOI LUT SQ and a linear MOD LUT, are specified within one image, then the value for Rescale Slope is restricted to 1.

If the VOI LUT SQ contains multiple LUTs, then only the first one is used by default. The other VOI LUTs are selectable.

Only Rectangular and Circular Shutter Shape is supported in this version. Images containing other Shutter Shapes will be displayed w/o shutter.

### 5.1.3.1.3.2   Image Pixel Attribute Acceptance Criterion for Color Images - Viewing

The COHERENCE Multi-Modality Viewing application supports the RGB color image description with the unsigned integer 24-bit color image plane pixel format. Accepted values:

- samples per pixel (attribute 0028, 0002) = 3

- photometric interpretation (attribute 0028,0004) = "RGB"

- pixel representation (attribute 0028, 0103) = 0

- bits allocated (attribute 0028, 0100) = 8

- bits stored (attribute 0028,0101) = 8

- high bit (attribute 0028,0102) = 7

- planar configuration (attribute 0028,0006) = 0 (pixel interleave) or 1 (plane interleave).

The COHERENCE Multi-modality Viewing application supports the "Palette Color" color image description with the unsigned integer and 2's complement pixel format. Accepted values:

- samples per pixel (attribute 0028, 0002) = 1

- photometric interpretation (attribute 0028,0004) = "PALETTE COLOR"

- pixel representation (attribute 0028, 0103) = 0

- bits allocated (attribute 0028, 0100) = 8 and bits stored (attribute 0028,0101) = 8

- bits allocated (attribute 0028, 0100) = 16 and bits stored (attribute 0028,0101) = 16

- high bit (attribute 0028,0102) = 7, 15

Both 8-bit and 16-bit palettes are supported, but NO Segmented Palette Color LUTs.

The COHERENCE Multi-modality Viewing application supports the YBR_FULL color image description with the unsigned integer pixel format. Accepted values:

- samples per pixel (attribute 0028, 0002) = 3

- photometric interpretation (attribute 0028,0004) = "YBR_FULL"

- pixel representation (attribute 0028, 0103) = 0

- bits allocated (attribute 0028, 0100) = 8 and bits stored (attribute 0028,0101) = 8

- high bit (attribute 0028,0102) = 7

If COHERENCE software is making any persistent changes on a YBR image, the resulting new image will be saved with Photometric Interpretation = "RGB".

### 5.1.3.1.4     Presentation Context Acceptance Criterion

The COHERENCE DICOM application will accept any number of verification or storage SOP classes that are listed above. The number of presentation contexts accepted is limited to the maximum of 127 (DICOM limit). In the event that the COHERENCE DICOM application runs out of resources, it will reject the association request.

### 5.1.3.1.5     Transfer Syntax Selection Policies

The COHERENCE DICOM application currently supports

- the Implicit VR Little Endian, the Explicit VR Little Endian and Explicit VR Big Endian Transfer Syntaxes

- the JPEG Lossless Non-hierarchical Transfer Syntax

- the JPEG Baseline and JPEG Extended Transfer Syntaxes (JPEG Lossy).

- the RLE Lossless Transfer Syntax

Any proposed presentation context including one of these Transfer Syntaxes will be accepted. Any proposed presentation context that does not include one of these Transfer Syntaxes will be rejected.

The order of preference in accepting Transfer Syntaxes within Presentation Contexts or Presentation Contexts with single Transfer Syntaxes is:

- JPEG Lossy Extended

- JPEG Lossless non-hierarchical

- JPEG Lossy Baseline

- RLE Lossless

- Explicit VR Little Endian

- Explicit VR Big Endian

- Implicit VR Little Endian

With RLE Lossless Transfer Syntax the COHERENCE DICOM application will decompress the object before storing it into the database.

With Implicit VR Little Endian Transfer Syntax the COHERENCE DICOM application will remove any Private Attributes not known to the application. Decision on removal of a Private Element is done if there is NO entry in the attribute-dictionary of the COHERENCE DICOM application.

Therefore any Explicit VR Transfer Syntax shall preferably be used by the Storage SCU's when sending Composite Object Instances to the COHERENCE DICOM application.

# 6. Implementation Model Storage Commitment

The Storage Commitment service class defines an application-level class of service which facilitates the commitment to storage. It performs an additional task of commitment of composite objects apart from the network based storage of objects as defined by the Storage Service class. The COHERENCE DICOM implementation supports the Storage Commitment Push Model as SCU and SCP.

## 6.1 Application Data Flow Diagram

The COHERENCE DICOM network implementation acts as SCU/SCP for the Storage Commitment Push Model Service using the Storage Commitment Service Class. The product target Operating System is Microsoft Windows XP Professional with Service Pack 1.

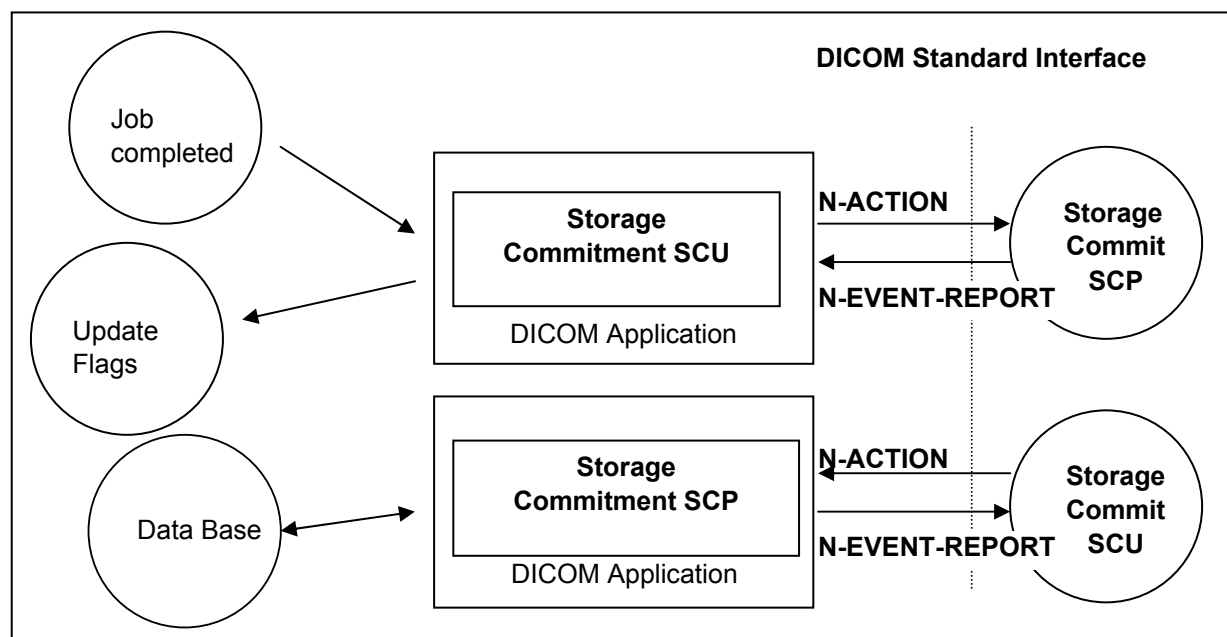

*Figure 3. Application Data Flow Diagram – Storage Commitment SCU/SCP*

## 6.2 Functional Definitions of Application Entities

With each successfully completed send job, the COHERENCE DICOM Application will create a Storage Commitment Push Model Identifier from the SOP Instances sent. Then a Storage Commit Request is triggered. Depending on configuration, the COHERENCE DICOM application will keep the association open for responses with a configurable time-out, or closes the association and expects responses on a different association that has to be establishes by the remote Storage Commitment SCP.

The commitment status derived from the related trigger response will be indicated in the related Status Flags of the related entity. It is possible to create triggers ("auto rules") from this event.

The Transaction UIDs of the pending commitment request are kept "open" for a configurable amount in time (default: 1h). If the "open time" for a pending commitment request has elapsed w/o a related response from the provider, the Transaction UID is removed and the related entities are indicated as "commit failed".

In any case, commitment will only be requested for previously and successfully sent objects.

The Storage Commitment SCP is running in background and is ready to receive request when the system is started.

## 6.3 Sequencing of real World Activities

The Storage Commitment trigger is automatically derived from the successful completion of a Send Job.

# 7. AE Specification Storage Commitment

## 7.1 Storage Commitment AE Specification

SIEMENS COHERENCE DICOM application provides Standard Conformance to the following DICOMV3.0 SOP Class as an SCU and SCP:

| SOP Class Name | SOP Class UID |
|---|---|
| Storage Commitment Push Model | 1.2.840.10008.1.20.1 |

*Table 8.        Storage Commitment class as an SCU and SCP*

### 7.1.1 Association Establishment Policies

#### 7.1.1.1     General

With a Send Job successfully completed, the DICOM application will generate an Storage Commitment Identifier which references to all Instances of the processed job. The Commit Request is then sent over a single opened association. The COHERENCE will wait for Status responses of the Storage Commitment Request. If the Provider accepts the Storage Commitment with Success Status, the generated Transaction UID, together with study identification data and a time-stamp, is kept. Depending on configuration, the association is closed when the configured time-out has elapsed or a response was received before. If the association is closed before a response was received, the response is then expected on a different association. Multiple Storage Commitment Requests can be pending.

The default PDU size used will be 28 KB.

#### 7.1.1.2     Number of Associations

The COHERENCE DICOM application initiates several associations at a time, one for each destination to which a transfer request is being processed in the active job queue list.

The COHERENCE DICOM application is able to accept multiple associations at a time. It can handle up to 10 associations in parallel.

#### 7.1.1.3     Asynchronous Nature

The COHERENCE DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

#### 7.1.1.4     Implementation Identifying Information

| COHERENCE product | Implementation Class UID | Implementation Version Name |
|---|---|---|
| Dosimetrist v2.2 | 1.3.12.2.1107.5.9.20000101 | SIEMENS_SWFVE10B |
| *Other* | 1.3.12.2.1107.5.5.9.20010101 | SIEMENS_SWFVD20L |

## 7.1.2 Association Initiation Policy

The COHERENCE DICOM Application Entity acts as a Service Class User (SCU) for the Storage Commitment Push Model Service Class (to request commitment for storage of instances previously sent).

To do so, the COHERENCE will issue an

- N-ACTION DIMSE to request commitment or a

- N-EVENT-REPORT DIMSE to respond to a received storage commitment request and the association was closed by the remote system prior to response.

### 7.1.2.1 Real World Activity – Storage Commitment

### 7.1.2.1.1 Associated Real-World Activity - Job Completed

The COHERENCE Storage Commitment application sends the commit request (N-ACTION-RQ) message and waits for acceptance of this request (N-ACTION-RSP). After receiving this, the transaction is marked as "waiting".

Depending on a configuration value, the association will then be closed or kept open. In the first case, there is another configurable timeout giving the number of hours (h) and minutes (m) (by default 1h:0m) to wait for the corresponding commit response (N-EVENT-REPORT). In the second case, this time is the (also configurable) time-out for the association. For both cases, if the commit response (N-EVENT-REPORT) does not arrive during the configured time, the transaction will be marked as failed. The COHERENCE does not re-send objects from a failed Storage Commitment result in any case.

If the commit response (N-EVENT-REPORT) received has the status of "complete - failure exists", the transaction is marked as failed, else the transaction is marked as "completed"; In both cases, a message is shown to the user.

### 7.1.2.1.2 Proposed Presentation Contexts - Job Completed

The COHERENCE DICOM application will propose Presentation Contexts as shown in the following table:

| Presentation Context Table | | | | | |
|---|---|---|---|---|---|
| Abstract Syntax | | Transfer Syntax | | | Ext. Neg. |
| Name | UID | Name List | UID List | Role | |
| Storage Commitment Push Model | 1.2.840.10008.1.20.1 | Implicit VR Little Endian Explicit VR Little Endian Explicit VR Big Endian | 1.2.840.10008.1.2 1.2.840.10008.1.2.1 1.2.840.10008.1.2.2 | SCU | None |

*Table 9.        Proposed presentation contexts – Request Storage Commitment*

### 7.1.2.1.3 SOP Specific Conformance Statement - Job Completed

Storage Commitment is supported for all the SOP class UIDs as mentioned in 'Acceptable presentation contexts - Storage' in the Storage SCP section of this document.

The Referenced Study Component Sequence is not supported.

Storage Media File-Set ID and UID Attributes will not be supported in the commitment request (N-ACTION primitive) invoked by the Storage Commitment SCU.

### 7.1.2.1.4 Associated Real-World Activity - Send Commit Response

Acting as an Storage Commitment Provider, the COHERENCE Storage Commitment AE received an Storage Commitment request, carried out the request, and is ready to send back the response, but the

association is not open anymore. In this case it will by itself initiate an association to send the storage commitment response (N-EVENT-REPORT) to the SCU.

### 7.1.2.1.5    Proposed Presentation Contexts - Send Commitment Response

The Siemens COHERENCE DICOM application will propose Presentation Contexts as shown in the following table:

| Presentation Context Table | | | | | |
|---|---|---|---|---|---|
| Abstract Syntax | | Transfer Syntax | | Role | Ext. Neg. |
| Name | UID | Name List | UID List | | |
| Storage Commitment Push Model | 1.2.840.10008.1.20.1 | Implicit VR Little Endian Explicit VR Little Endian Explicit VR Big Endian | 1.2.840.10008.1.2 1.2.840.10008.1.2.1 1.2.840.10008.1.2.2 | SCP | None |

*Table 10.      Proposed Presentation Contexts - Send Commitment Response*

### 7.1.2.1.6    SOP Specific Conformance Statement - Send Commitment Response

Storage Media File-Set ID and UID Attributes will not be supported in the N-EVENT-REPORT primitive invoked by the Storage Commitment SCP.

### 7.1.3  Association Acceptance Policy

The COHERENCE DICOM Application Entity acts as a Service Class Provider (SCP) for the Storage Commitment Push Model Service Class (Give a commitment to store previously received instances).

To do so, the COHERENCE attempts to accept an

-   N-ACTION DIMSE to receive a commitment request for the instance included or a
-   N-EVENT-REPORT DIMSE to receive a storage commitment response from a previous request

and the SCP behavior requires a different association than the commit request.

### 7.1.3.1    Associated Real-World Activity - Commit SCP

### 7.1.3.1.1    Associated Real-World Activity - Receive Commit Request

When receiving an Storage Commitment request the COHERENCE DICOM application will perform the necessary steps to check the received list Instances against the local database or, if configured, check the Instances with the attached archive system.>

### 7.1.3.1.2    Accepted Presentation Contexts - Receive Commit Request

The Siemens COHERENCE DICOM application will accept Presentation Contexts as shown in the following table:

| Presentation Context Table | | | | | |
|---|---|---|---|---|---|
| Abstract Syntax | | Transfer Syntax | | Role | Ext. Neg. |
| Name | UID | Name List | UID List | | |
| Storage Commitment Push Model | 1.2.840.10008.1.20.1 | Implicit VR Little Endian Explicit VR Little Endian Explicit VR Big Endian | 1.2.840.10008.1.2 1.2.840.10008.1.2.1 1.2.840.10008.1.2.2 | SCP | None |

*Table 11.      Accepted Presentation Contexts - Receive Commit Request*

### 7.1.3.1.3    SOP-specific Conformance Statement - Receive Commit Request

The COHERENCE Storage Commitment DICOM Application can be configured to run on an archive system.

If the Storage Commitment Application is running on an archive system, it will interact with this archive system in order to commit the storage of images and will send back to the SCU the result of the operation.

If not running on an archive node, the COHERENCE Storage Commitment AE will return success for images that are stored in the local database and failure for images that are not. However, the committed images can later be deleted by the user on the SCP side!

Remark: When not running on an archive system, sending data with Storage Commitment via network is a safe data transfer but does not fulfill the regulatory requirements of long-term archiving, objects with the "committed" flag may be deleted by the user.

### 7.1.3.2    Associated Real-World Activity - Commit SCU

### 7.1.3.2.1    Associated Real-World Activity - Update Flags

The COHERENCE Storage Commitment DICOM Application has sent a Storage Commitment Request and, being configured to receive response on a separate association, has closed the association, and now it gets an association request from the Storage Commitment SCP that want to send the results. The COHERENCE DICOM application will await Storage commitment Notification triggers. Any incoming Notification will be checked for validity, that is, if the related Transaction UID is still part of the Pending Request Queue.

If the Notification is valid, the Notification Identifier is evaluated and the related Instances marked with the related status. The over-all Commit Status of the higher Information Entities is derived from propagation of the States of all Image entities included in a study.

The Status Flags directly affected by Storage Commitment results and indicated in the different entities of the Patient Browser list can be one of

- "AC" or "SC" - Successful Commitment, A means archived to configured Archive destination, whereas S means sent to any other destination

- "Af" of "Sf" - Commitment failed.

- "A?" or "S?" - Commitment request is sent, response is pending.

In case of failure the user has to repeat the transfer of images to the Archive destination. Another Storage Commitment will be performed after sending is completed successfully.

### 7.1.3.2.2    Accepted Presentation Contexts - Update Flags

The Siemens COHERENCE DICOM application will accept Presentation Contexts as shown in the following table:

| Presentation Context Table | | | | | |
|---|---|---|---|---|---|
| Abstract Syntax | | Transfer Syntax | | | Ext. |
| Name | UID | Name List | UID List | Role | Neg. |
| Storage Commitment Push Model | 1.2.840.10008.1.20.1 | Implicit VR Little Endian<br>Explicit VR Little Endian<br>Explicit VR Big Endian | 1.2.840.10008.1.2<br>1.2.840.10008.1.2.1<br>1.2.840.10008.1.2.2 | SCU | None |

*Table 12.    Accepted Presentation Contexts - Update Flags*

### 7.1.3.2.3    SOP-specific Conformance Statement - Update Flags

If the Commitment response (N-EVENT-REPORT) received has the status of "complete - failure exists", the transaction is marked as failed, otherwise the transaction is marked as "completed"; In both cases, a message is shown to the user.
The related status flags are set for the committed images in the local database.

The COHERENCE DICOM application will NOT support the Storage Media File Set ID attributes.

# 8. Implementation Model Query / Retrieve

The query/retrieve service class defines an application-level class of services which facilitates the management of objects and patient data against the well-defined information model of DICOM and allows a DICOM AE to retrieve objects from a remote DICOM node or to request a remote DICOM AE to initiate a transfer of objects to another DICOM AE. The COHERENCE DICOM query/retrieve application supports the query/retrieve services to act as SCU and SCP.

## 8.1    Application Data Flow Diagram

The COHERENCE DICOM network implementation acts as SCU and SCP for the query/retrieve network service. The product target Operating System is Microsoft Windows XP Professional with Service Pack 1.

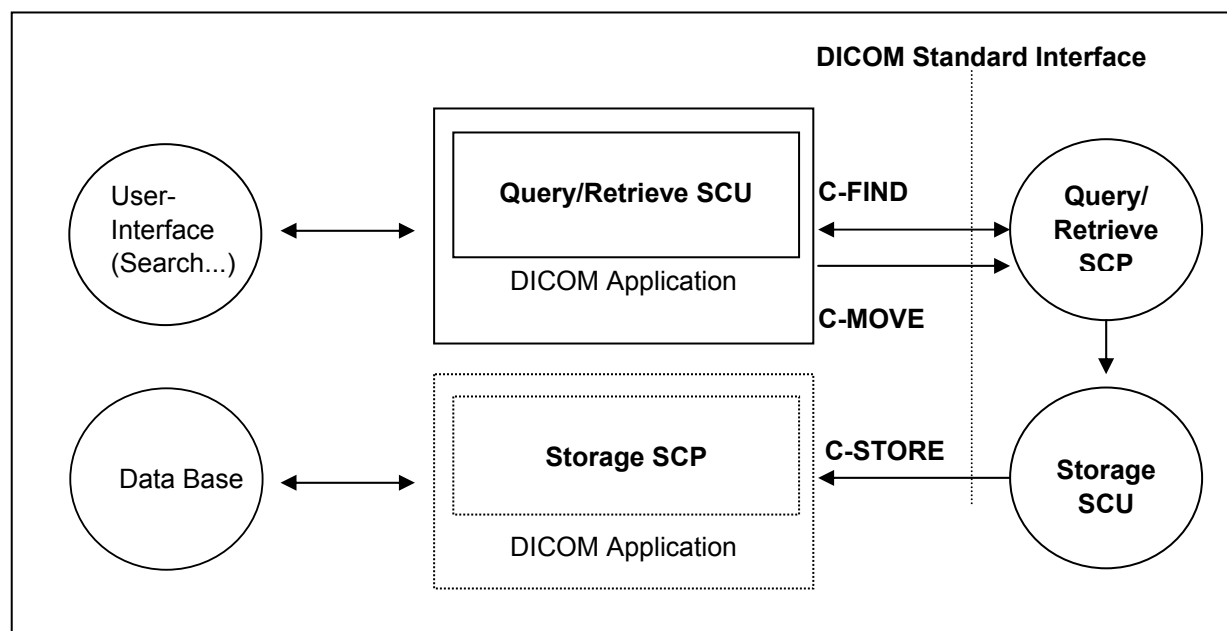

*Figure 4.      COHERENCE Application Data Flow Diagram – Query/Retrieve SCU*
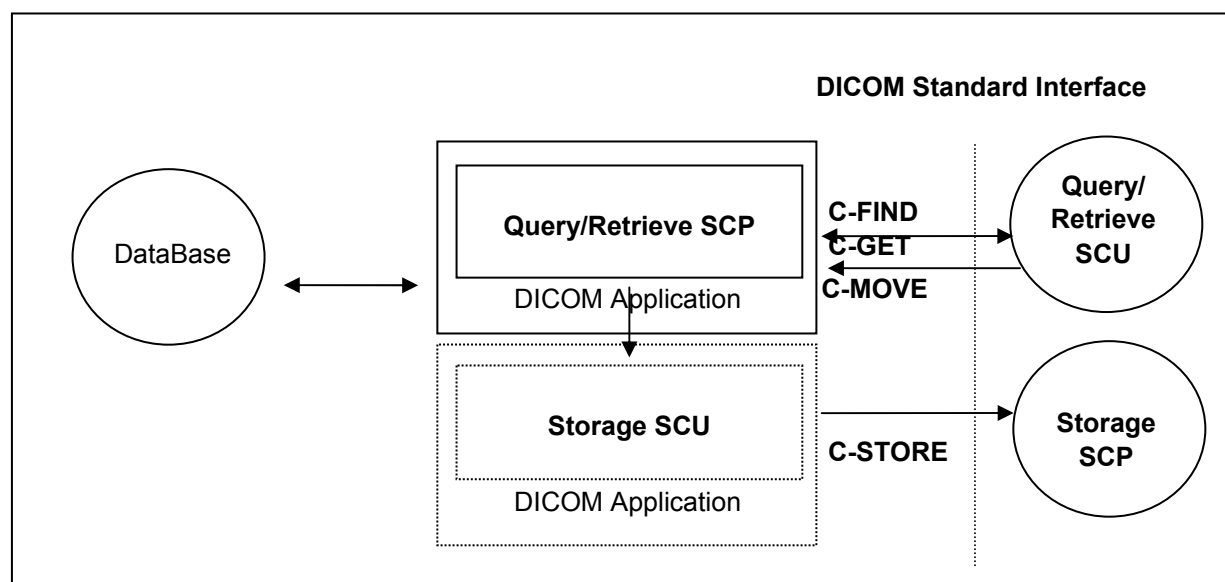

*Figure 5.      COHERENCE Application Data Flow Diagram – Query/Retrieve SCP*

## 8.2    Functional Definitions of Application Entities

The COHERENCE DICOM query/retrieve SCU requests the remote query/retrieve SCP to perform a search and match to the keys specified in the request in order to display the results in the COHERENCE user interface. Depending on user action (Import) the COHERENCE DICOM SCU sends a C-MOVE DIMSE service to initiate a C-STORE sub-operation on the SCP to start an object transfer from remote Storage SCU (running on Query/Retrieve SCP) to the COHERENCE Storage SCP.

The COHERENCE DICOM query/retrieve SCP responds to C-FIND DIMSE services from remote SCU applications. Depending on further remote request, a C-GET or a C-MOVE involves the COHERENCE DICOM query/retrieve SCP application to initiate a C-STORE association (by triggering and parametrizing the own Storage SCU) to send objects to a remote Storage SCP.

All components of the DICOM query/retrieve SCP application are operating as background server processes. They are existing when the machine is powered on and then respond to queries based on the records stored in its database.

## 8.3    Sequencing of Real-World Activities

Retrieve of objects is only possible if results from a previous "Search..." operation exist and those entities can be selected for "Import".

# 9.  Application Entity Specification Query/Retrieve

## 9.1    Query/Retrieve Service AEs Specification

The Query/Retrieve SCU requests that the remote SCP performs a match of all keys specified in the request, against the information in its database and the identified objects will be moved over a different (C-MOVE) storage association.

The Query/Retrieve SCP responds to queries based on the records based on its database and objects will be sent to the requesting SCU or to a different storage destination.

SIEMENS COHERENCE DICOM products provide Standard Conformance to the following DICOM V3.0 SOP Classes as SCU:

| SOP Class Name | SOP Class UID |
|---|---|
| Patient Root Query/Retrieve Information Model - FIND | 1.2.840.10008.5.1.4.1.2.1.1 |

*Table 14.     Query/Retrieve Classes as an SCP*

**Note:**  See also the Storage DICOM Conformance Statement of the COHERENCE DICOM application to compare for conformance of the C-STORE sub-operation generated by the C-GET or C-MOVE DIMSE services. Furthermore compare the supported Storage Service SOP classes described in the Storage DICOM Conformance Statement of the Modality to which the objects shall be transferred to.

## 9.1.1  Association Establishment Policies

## 9.1.1.1      General

With the "Search..." function the query data are input and the DICOM query/retrieve application is started. A query request will be sent out to one remote node that can be selected from a list of configured Query

Providers and the response data will be displayed for the user. Upon request (Import), the retrieval of selected items is initiated.

The default PDU size used will be 28 KB.

### 9.1.1.2 Number of Associations

The COHERENCE DICOM application initiates several associations at a time, one for each destination to which a transfer request is being processed in the active job queue list.

The COHERENCE DICOM application is able to accept multiple associations at a time. It can handle up to 10 associations in parallel.

### 9.1.1.3 Asynchronous Nature

The COHERENCE DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

### 9.1.1.4 Implementation Identifying Information

| COHERENCE product | Implementation Class UID | Implementation Version Name |
|---|---|---|
| Dosimetrist v2.2 | 1.3.12.2.1107.5.9.20000101 | SIEMENS_SWFVE10B |
| *Other* | 1.3.12.2.1107.5.5.9.20010101 | SIEMENS_SWFVD20L |

## 9.1.2 Association Initiation Policy

The query user interface will request the query-data from user and triggers one C-FIND request to the selected remote node. The response data will be displayed in the query UI for further data navigation.

When requesting Import of related items the browser requests the retrieve application to send a C-MOVE request to the related remote node. Objects will then be received by the Storage SCP as described in the related section.

### 9.1.2.1 Real World Activity - Find SCU

### 9.1.2.1.1 Associated Real-World Activity - Find SCU "Search"

The associated Real-World activity is to fill out a query form with search data and pass it as query to the network application which issues a C-FIND over a previously built association. The remote SCP will respond with related data-entries that will be passed to a browser application. When data transfer is finished the association is closed.

### 9.1.2.1.2 Proposed Presentation Contexts - Find SCU

The COHERENCE DICOM application will propose Presentation Contexts as shown in the following table:

| Presentation Context Table | | | | | |
|---|---|---|---|---|---|
| Abstract Syntax | | Transfer Syntax | | | Ext. |
| Name | UID | Name List | UID List | Role | Neg. |
| Patient Root Query/Retrieve Model - FIND | 1.2.840.10008.5.1.4.1.2.1.1 | Implicit VR Little Endian Explicit VR Little Endian Explicit VR Big Endian | 1.2.840.10008.1.2 1.2.840.10008.1.2.1 1.2.840.10008.1.2.2 | SCU | None |

*Table 15.      Proposed Presentation Contexts - Find SCU*

It is configurable which of the two query models (or both) are to be used by the COHERENCE DICOM Query SCU application. If both Abstract Syntaxes are configured, The C-FIND SCU will use the Patient Root Model only for C-FIND requests on PATIENT level. For all other levels it will use the STUDY root model.

### 9.1.2.1.3      Conformance Statement - Find SCU

The COHERENCE DICOM Query/Retrieve SCU supports hierarchical queries with all mandatory search keys. The interactive querying of attributes on IMAGE level is not supported by the Query SCU, hence retrieval of individual Objects is possible. The following table describes the search keys for the different query models that the SCU supports. Matching is either wildcard, which means that the user can supply a string containing wildcards, or universal, which means that the attribute is requested as return value.

| Attribute name | Tag | Type | Matching | User input | Return value display |
|---|---|---|---|---|---|
| **Patient Level [a]** | | | | | |

## 9.1.2.2 Real-World Activity – Move SCU

## 9.1.2.2.1 Associated Real-World Activity – Move SCU "Import"

When selecting a data entry in the Query UI and activate the "Import" function, a retrieval request is passed to the archival application which issues a C-MOVE service according to the Patient Root or Study Root query model. (The Storage Service Class Conformance Statement describes the C-STORE service, which is generated by processing the C-MOVE service.)

The transferred object data are processed as described in the storage class SCP descriptions.

The possibility to request the remote C-MOVE provider (remote application that responded to the C-FIND) to move data to an application entity other than the C-MOVE SCU (the COHERENCE DICOM application) is NOT USED.

C-MOVE operation on Patient Level is not supported by the Query UI.

## 9.1.2.2.2 Proposed Presentation Contexts - Move SCU "Import"

The COHERENCE DICOM application will propose Presentation Contexts as shown in the following table:

| Presentation Context Table | | | | | |
|---|---|---|---|---|---|
| Abstract Syntax | | Transfer Syntax | | Role | Ext. Neg. |

**Note:**     C-MOVE extended negotiation will not be supported by the SCU

### 9.1.2.2.3     SOP Specific Conformance Statement - Move SCU "Import"

At association establishment time the C-MOVE presentation context shall be negotiated. The C-STORE sub-operations must be done on a different association to transfer objects to the own Storage Service Class SCP.

The Move SCU interprets following status codes:

| Service Status | Meaning | Error Codes | Related Fields |
|---|---|---|---|
| Refused | Out of Resources - Unable to calculate number of matches | A701 | (0000,0902) |

*Table 19.     C-MOVE response status*

### 9.1.3  Association Acceptance Policy

The COHERENCE DICOM application will accept associations for the following DIMSE-C operations as SCP:

-    C-FIND

---

- C-GET

- C-MOVE

- C-FIND-CANCEL

- C-GET-CANCEL

- C-MOVE-CANCEL

### 9.1.3.1 Real-World Activity - Find SCP

### 9.1.3.1.1 Associated Real-World Activity - Find SCP

The associated Real-World activity is to respond query requests to an SCU with the query model Patient Root, Study Root and Patient/Study Only. Relational retrieve operation is NOT supported. With a C-FIND-CANCEL request the running query can be canceled at any time.

Multiple C-FIND requests over the same association are supported.

### 9.1.3.1.2 Accepted Presentation Contexts - Find SCP

The COHERENCE DICOM application will accept Presentation Contexts as shown in the following table:

| Presentation Context Table | | | | | |
|---|---|---|---|---|---|
| Abstract Syntax | | Transfer Syntax | | Role | Ext. Neg. |
| Name | UID | Name List | UID List | | |
| Patient Root Query/Retrieve Model – FIND | 1.2.840.10008.5.1.4.1.2.1.1 | Implicit VR Little Endian Explicit VR Little Endian Explicit VR Big Endian | 1.2.840.10008.1.2 1.2.840.10008.1.2.1 1.2.840.10008.1.2.2 | SCP | None |

*Table 20.        Accepted Presentation Contexts - Find SCP*

**Note:**    C-FIND Extended Negotiation will NOT be supported.
The order of preference for accepting Transfer Syntaxes is: 1. Explicit VR Little Endian, 2. Explicit VR Big Endian, 3. Implicit VR Little Endian

### 9.1.3.1.3 SOP Specific Conformance Statement - Find SCP

The COHERENCE DICOM Query/Retrieve SCP supports hierarchical queries with all mandatory and optional search keys.

The query attribute contents will be treated case-sensitive.

With wildcard queries the symbol "?" is treated as "*" by the C-FIND SCP application. As a consequence the query string of "?abc*" will be processed as "*abc*".

If the value for the patient-level unique key "Patient ID" is not known, it may be returned with zero length. The attribute "Image Comments" will not be included in the C-FIND-RSP, if it is not set in the DB, even if it was requested as return key in the related C-FIND-RQ.

Usage of Storage Media File-Set ID, Retrieve AE Title with C-FIND-RSP message:

The Storage Media File-Set ID - if existent - can be returned at Study/Series/Image Level. Only on Image Level, the values of ONLINE, NEARLINE of OFFLINE are returned to indicate the Storage Location of the related Instance.

The Retrieve AE Title - if existent - can only be returned at Image Level (for Patient Root and Study Root models) or Study Level (for Patient/Study Only model).

Relational Queries are **not** supported.

A remote DICOM AE can cancel the running query by sending a C-FIND-CANCEL. Matches are possibly continuing (more C-FIND response with status PENDING) until the cancel operation has completed.

The supported attributes on the various query levels of the three supported information models are list in the tables of the following sections.

### 9.1.3.2     Real-World Activity - Get SCP

### 9.1.3.2.1     Associated Real-World Activity - Get SCP

The associated Real-World activity is to respond to retrieve requests initiated from a foreign SCU. The SCP supports the query model Patient Root, Study Root and Patient/Study Only. The Storage Service Class Conformance Statement describes the C-STORE service, which is generated by the C-GET service. Relational retrieve operation is NOT supported.

Multiple C-GET requests over the same association are NOT supported.

## 9.1.3.2.2    Accepted Presentation Contexts - Get SCP

The COHERENCE DICOM application will accept Presentation Contexts as shown in the following table:

| Presentation Context Table | | | | | |
|---|---|---|---|---|---|
| Abstract Syntax | | Transfer Syntax | | Role | Ext. Neg. |
| Name | UID | Name List | UID List | | |
| Patient Root Query/Retrieve Model – GET | 1.2.840.10008.5.1.4.1.2.1.3 | Implicit VR Little Endian<br>Explicit VR Little Endian<br>Explicit VR Big Endian | 1.2.840.10008.1.2<br>1.2.840.10008.1.2.1<br>1.2.840.10008.1.2.2 | SCP | None |

*Table 25.    Accepted Presentation Contexts - Get SCP*

**Note:**   C-GET Extended negotiation will NOT be supported.
The order of preference for accepting Transfer Syntaxes is: 1. Explict VR Little Endian, 2. Explicit VR Big Endian, 3. Implicit VR Little Endian.

## 9.1.3.2.3    SOP Specific Conformance Statement - Get SCP

At association establishment time the C-GET presentation context must be negotiated along with the C-STORE sub-operations which must be accomplished on the same association as the C-GET operation. Relational retrieve operation is NOT supported.

All unique keys have to be supplied according to the selected Query/Retrieve Level. The related tables in the C-FIND SCP section will give information about "U" marked key attributes.

The Get SCP returns following status codes:

| Service Status | Meaning | Error Codes | Related Fields |
|---|---|---|---|
| Refused | Out of Resources - Unable to calculate number of matches | A701 | (0000,0902) |
| | Out of Resources - Unable to perform sub operations | A702 | (0000,1020)<br>(0000,1021)<br>(0000,1022)<br>(0000,1023) |

## 9.1.3.3      Real-World Activity - Move SCP

### 9.1.3.3.1      Associated Real-World Activity - Move SCP

The associated Real-World activity is to respond to retrieve requests to an SCU. The SCP supports the query model Patient Root, Study Root and Patient/Study Only. The Storage Service Class Conformance Statement describes the C-STORE service, which is generated by the C-MOVE service. Relational retrieve operation is NOT supported.

Multiple C-MOVE requests over the same association are NOT supported.

### 9.1.3.3.2      Accepted Presentation Contexts - Move SCP

The COHERENCE DICOM application will accept Presentation Contexts as shown in the following table:

| Presentation Context Table | | | | | |
|---|---|---|---|---|---|
| Abstract Syntax | | Transfer Syntax | | Role | Ext. Neg. |
| Name | UID | Name List | UID List | | |

**Note:**    C-MOVE Extended negotiation will NOT be supported.
The order of preference for accepting Transfer Syntaxes is: 1. Explict VR Little Endian, 2. Explicit VR Big Endian, 3. Implicit VR Little Endian.

### 9.1.3.3.3      SOP Specific Conformance Statement - Move SCP

At association establishment time the C-MOVE presentation context shall be negotiated. The C-STORE sub-operations is done on a different association, specified in the C-MOVE request, to transfer objects to a remote SCP of the Storage Service Class. Relational retrieve operation is NOT supported.

All unique keys have to be supplied according to the selected Query/Retrieve Level. The related tables in the C-FIND SCP section will give information about "U" marked key attributes.

The Move SCP returns following status codes:

| Service Status | Meaning | Error Codes | Related Fields |
|---|---|---|---|
| Refused | Out of Resources - Unable to calculate number of matches | A701 | (0000,0902) |
| | Out of Resources - Unable to perform sub operations | A702 | (0000,1020) (0000,1021) (0000,1022) (0000,1023) |

# 10.    Implementation Model Print

The Print Management Service Classes define an application-level class of services, which facilitate the printing of images on a hardcopy medium. The print management SCU and print management SCP are peer DICOM print management application entities. The *syngo* DICOM print application supports the print management DIMSE services to act as SCU.

## 10.1   Application Data Flow Diagram

The *syngo* DICOM network implementation acts as SCU for the print management network service. The product target Operating System is Microsoft Windows XP Professional with Service Pack 1.
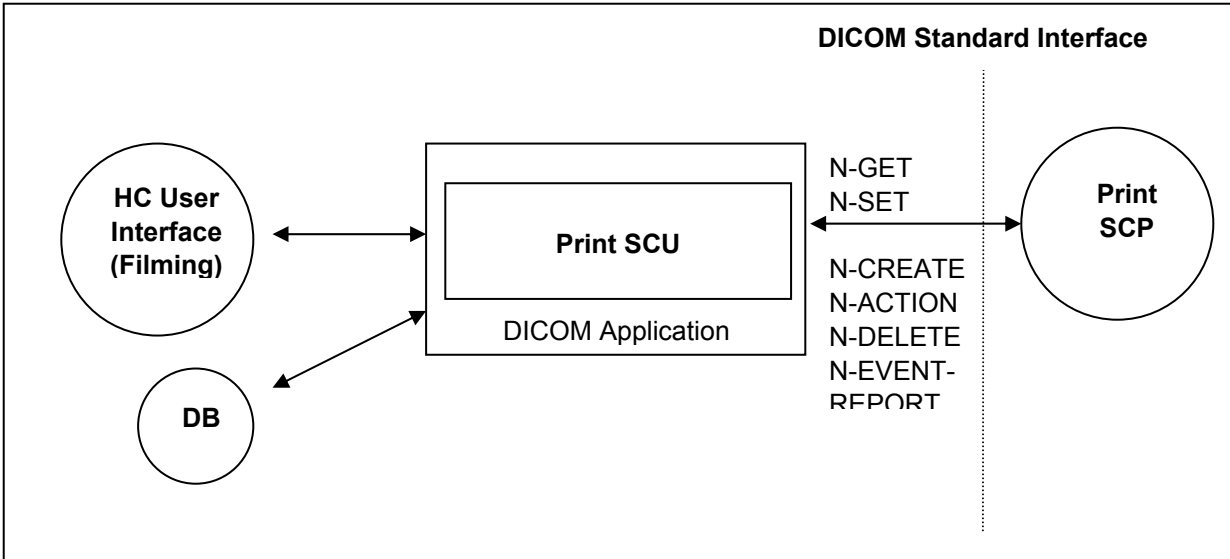

*Figure 6.      DICOM Application Data Flow Diagram – Print SCU*

## 10.2   Functional Definition of Application Entities

The Print SCU is invoked by the user interface to setup film-sheet layout and whenever an image is ready to be printed on film. The Print SCU will hold and maintain all data needed to compile a complete film-sheet from the data (images, layout, configuration) received. Whenever a film-sheet is ready to print the related data is used to supply the Information to the SOP Classes of the Print Management Service Class. A queue is maintained, in order to intermediately store several film-sheets in case of resource problems on printer. The SCU will only supply and require the mandatory SOP Classes of the Print Management Service Class.

## 10.3   Sequencing of Real-World Activities

Not applicable.

# 11.   Application Entity Specification Print

## 11.1   Print Management AE Specification

The *syngo* print management SCU (HCS) invokes print management DIMSE services to transfer images from the local AE to the remote SCP AE to print images with defined layout on a selected network-based DICOM hardcopy printer. This is done in an "full-page" print mode.

SIEMENS *syngo* DICOM products provide Standard Conformance to the following DICOM V3.0 Print Management Meta SOP Classes as an SCU:

| SOP Class Name | SOP Class UID |
|---|---|
| Basic Grayscale Print Management Meta SOP Class | 1.2.840.10008.5.1.1.9 |

## 11.1.1 Association Establishment Policies

### 11.1.1.1        General

Whenever a film is completely set up and printed by command or automatism, the job is prepared for processing. As soon as the queue is ready to process the job is activated and worked according the processing data. The related Print application will initiate an association to the print destination and process the printing of the related information. <modify this value according to the product configuration:>

The default PDU size used will be 28 KB.

### 11.1.1.2        Number of Associations

The *syngo* DICOM Print application initiates one association at a time for each different print device configured.

### 11.1.1.3        Asynchronous Nature

The *syngo* DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

### 11.1.1.4        Implementation Identifying Information

| COHERENCE product | Implementation Class UID | Implementation Version Name |
|---|---|---|
| Dosimetrist v2.2 | 1.3.12.2.1107.5.9.20000101 | SIEMENS_SWFVE10B |
| *Other* | 1.3.12.2.1107.5.5.9.20010101 | SIEMENS_SWFVD20L |

### 11.1.2        Association Initiation Policy

Triggered by the Print job queue the Print Management SCU establishes an association by using the DICOM association services. With the help of the N-GET request for the Printer SOP Class the Status is determined before printing.

With no problem encountered with the N-CREATE/N-SET Services for the related Basic Print SOP Classes the film sheet is set up for printing and the image(s) is(are) transferred to the printer device.

After the last film is printed from queue, the Print application will leave open the association for another 60 seconds. If a new film job is ready for printing within this time-limit, the job will be immediately processed over the still open association. If there is no new job, the association is closed if the time-out elapsed. This is done to optimize automated printing.

During the "idle-time" (no open association to printer) the Print application will issue a cyclic camera status request (using N-GET of Printer SOP Class) every 5 minutes.

### 11.1.2.1 Associated Real-World Activity

### 11.1.2.1.1 Associated Real-World Activity – Printing a Printer Job Queue Entry

Whenever a film-sheet is prepared by the user, it is forwarded to the Printer Job queue. As soon as the associated Printer device is available the job is activated and association is set up.

The film sheet is internally processed, converted to a Standard/1-1 page and then the page image is sent. Status is controlled by awaiting any N-EVENT message all through the transfer until the last image or film-sheet is sent.

If the response from the remote application contains a status other than Success or Warning the association is aborted.

### 11.1.2.1.2 Proposed Presentation Context - Print

The Siemens *syngo* DICOM Print application will propose Presentation Contexts as shown in the following table:

| Presentation Context Table | | | | | |

## 11.1.2.1.3    SOP Specific Conformance Statement – Meta SOP Classes

The *syngo* DICOM print management SCU conforms to the DICOM Basic Grayscale Print Management Meta SOP Class and the Basic Color Print Management Meta SOP Class.

The application uses a setting platform to define the properties of the connected DICOM SCP, e.g.:

- maximum number of print jobs in the queue

- maximum number of print copies

- supported film sizes of the connected DICOM SCP

- supported film formats of the DICOM SCP

- lookup table definition.

The printing is only suspended in the case of a failure return status of the SCP.

### 11.1.2.1.3.1  Basic Film Session SOP class

The Basic Film Session information object definition describes all the user-defined parameters, which are common for all the films of a film session. The Basic Film Session refers to one or more Basic Film Boxes and that are printed on one hardcopy printer.

The *syngo* DICOM print management SCU supports the following DIMSE Service elements for the Basic Film Session SOP Class as SCU:

- N-CREATE, N-DELETE

The Basic Film Session SOP Class N-CREATE-RQ (SCU) uses the following attributes:

| Attribute Name | Tag | Usage SCU | Supported Values |
|---|---|---|---|
| Number of Copies | (2000,0010) | U | 1 |
| Medium Type | (2000,0030) | U | BLUE FILM<br>CLEAR FILM<br>PAPER |
| Film Destination | (2000,0040) | U | MAGAZINE<br>PROCESSOR |

*Table 32.     Basic Film Session SOP Class N-CREATE-RQ attributes used*

The number of Copies sent to the DICOM Printer is always 1, the job is sent n times for n copies.

The affected SOP Instance UID received with N-CREATE-RSP message will be kept internally and used for later requests (e.g. N-DELETE-RQ) on the Basic Film Session – see below:

| Attribute Name | Tag | Source of Information |
|---|---|---|
| Requested SOP Instance UID | (0000,1000)<br>→ (0000,1001) | Affected SOP Instance UID of N-CREATE-RSP on Basic Film Session |

*Table 33.     N-DELETE-RQ on the Basic Film Session SOP Class attributes used*

The N-DELETE-RQ on the Basic Film Session SOP Class is used to remove the complete Basic Film Session SOP Instance hierarchy.

The Basic Film Session SOP class interprets the following status codes (from N-CREATE-RSP, N-DELETE-RSP messages):

| Service Status | Meaning | Error Codes |
|---|---|---|
| Failed | Film session SOP instances hierarchy does not contain film box SOP instances | C600 |
| | Unable to create print job, print queue is full | C601 |
| | Image size is larger than images box size | C603 |
| Warning | Memory allocation not supported | B600 |
| | Film session printing is not supported | B601 |
| | Film box does not contain image box (empty page) | B602 |
| Success | Film belonging to the film session are accepted for printing | 0000 |

*Table 34.    Basic Film Session SOP response status*

## 11.1.2.1.3.2  Basic Film Box SOP class

The Basic Film Box information object definition describes all the user-defined parameter of one film of the film session. The Basic Film Box information description defines the presentation parameters, which are common for all images on a given sheet of film.
The Basic Film Box refers to one or more Image Boxes.

Supported Service Elements as SCU are:

- N-CREATE

- N-ACTION

- N-DELETE

The Basic Film Box SOP class N-CREATE-RQ message uses the following attributes (the actual values for each attribute depend on DICOM printer configuration within the *syngo* DICOM print management SCU):

| Attribute Name | Tag | Usage SCU | Supported Values |
|---|---|---|---|
| Image Display Format | (2010,0010) | M | STANDARD\1,1 |
| Referenced Film Session Sequence | (2010,0500) | M | |
| > Referenced SOP Class UID | (0008,1150) | M | 1.2.840.10008.5.1.1.1 |

| Magnification Type | (2010,0060) | M | BILINEAR, CUBIC, NONE, REPLICATE |
| Border Density | (2010,0100) | U | BLACK, WHITE |
| Max Density | (2010,0130) | U | 0 < Value |
| Min Density | (2010,0120) | U | 0 < Value  < 50 |
| Illumination | (2010,015E) | U | 0 < Value Required if Presentation LUT is present. |
| Reflective Ambient Light | (2010,0160) | U | 0 < Value Required if Presentation LUT is present. |
| Referenced Presentation LUT Sequ. | (2050,0500) | U | |

*Table 35.    Film Box SOP class N-CREATE-RQ attributes used*

The N-CREATE-RSP message from the Print SCP includes the Referenced Image Box Sequence with SOP Class/Instance UID pairs which will be kept internally to be further used for the subsequent Basic Image Box SOP Class N-SET-RQ messages.

When all Image Boxes (including parameters) for the film-sheet have been set, the *syngo* DICOM print manager will issue a N-ACTION-RQ message with the SOP Instance UID of the Basic Film Box and the Action Type ID of 1.

The affected SOP Instance UID received with N-CREATE-RSP message will be kept internally and used for later requests (e.g. N-DELETE-RQ) on the Basic Film Box - see below:

| Attribute Name | Tag | Source of Information |
|---|---|---|
| Requested SOP Instance UID | (0000,1000) → (0000,1001) | Affected SOP Instance UID of N-CREATE-RSP on Basic Film Box |

*Table 36.     Attributes of the N-CREATE-RSP message on the Basic Film Box*

The Basic Film Box SOP class interprets the following status codes:

| Service Status | Meaning | Error Codes |
|---|---|---|
| Failure | Unable to create print job, print queue is full | C602 |
| | Image size is larger than images box size | C603 |
| Warning | Film box does not contain image box (empty page) | B603 |
| | Requested MinDensity or MaxDensity outside of Printer's operating range | B605 |
| Success | Film accepted for printing | 0000 |

*Table 37.     Basic Film Box SOP response status*

## 11.1.2.1.3.3  Basic Grayscale Image Box SOP Class

The Basic Grayscale Image Box information object definition is the presentation of an image and image related data in the image area of a film. The Basic Image Box information describes the presentation parameters and image pixel data, which apply to a single image of a sheet of film.

The Grayscale Image Box SOP Class uses only the N-SET-RQ with the following attributes:

| Attribute Name | Tag | Usage SCU | Supported Values |
|---|---|---|---|
| Image Position | (2020,0010) | M | 1 |
| BASIC Grayscale Image Sequence | (2020,0110) | M | |
| > Samples per Pixel | (0028,0002) | M | 1 |

| > Pixel Representation | (0028,0103) | M | 0 |
| > Pixel Data | (7FE0,0010) | M | |

*Table 38.     Basic Grayscale Image Box N-SET-RQ attributes*

The Grayscale Image Box SOP class interprets the following status codes:

| Service Status | Meaning | Error Codes |
|---|---|---|
| Failure | Image contains more pixel than printer can print in Image Box | C603 |
| | Insufficient memory in printer to store the image | C605 |

| Service Status | Meaning | Error Codes |
|---|---|---|
| Warning | Requested MinDensity or MaxDensity outside of Printer's operating range | B605 |
| Success | | 0000 |

*Table 39.      Basic Grayscale Image Box SOP Class response status*

### 11.1.2.1.3.4  Basic Color Image Box SOP Class

The Basic Color Image Box information object definition is the presentation of an image and image related data in the image area of a film. The Basic Image Box information describes the presentation parameters and image pixel data, which apply to a single image of a sheet of film.

The Color Image Box SOP Class uses only the N-SET-RQ with the following attributes:

| Attribute Name | Tag | Usage SCU | Supported Values |
|---|---|---|---|
| Image Position | (2020,0010) | M | 1 |
| BASIC Color Image Sequence | (2020,0111) | M | |
| > Samples per Pixel | (0028,0002) | M | 3 |

| > Planar Configuration | (0028,0006) | M | 0 |
| > Rows | (0028,0010) | M | |
| > Columns | (0028,0011) | M | |
| > Pixel Aspect Ratio | (0028,0034) | M | |
| > Bits Allocated | (0028,0100) | M | 8 |
| > Bits Stored | (0028,0101) | M | 8 |
| > High Bit | (0028,0102) | M | 7 |
| > Pixel Representation | (0028,0103) | M | 0 |
| > Pixel Data | (7FE0,0010) | M | |

*Table 40.      Basic Color Image Box N-SET attributes*

The Color Image Box SOP class interprets the following status codes:

| Service Status | Meaning | Error Codes |
|---|---|---|
| Failure | Image contains more pixel than printer can print in Image Box | C603 |
| | Insufficient memory in printer to store the image | C605 |
| Warning | Image size larger than image box size | B604 |
| Success | | 0000 |

*Table 41.      Basic Color Image Box SOP status*

### 11.1.2.1.3.5  Presentation LUT SOP Class

The objective of the Presentation LUT is to realize image hardcopy printing tailored for specific modalities, applications and user preferences.

The output of the Presentation LUT is Presentation Values (P-Values). P-Values are approximately related to human perceptual response. They are intended to facilitate common input for hardcopy. P-Values are intended to be independent of the specific class or characteristics of the hardcopy device.

The Presentation LUT SOP Class uses only the N-CREATE-RQ with the following attributes:

| Attribute Name | Tag | Usage SCU | Supported Values |
|---|---|---|---|
| Presentation LUT Shape | (2050,0020) | U | IDENTITY |

*Table 42.      Presentation LUT N-CREATE-RQ attributes*

The affected SOP Instance UID received with N-CREATE-RSP message will be kept internally and is used for later requests on the Basic Film Box (N-CREATE-RQ) and on the Presentation LUT (N-DELETE-RQ) - see below:

| Attribute Name | Tag | Source of Information |
|---|---|---|
| Requested SOP Instance UID | (0000,1000) → (0000,1001) | Affected SOP Instance UID of N-CREATE-RSP on Presentation LUT |

*Table 43.       N-CREATE-RSP on the Presentation LUT attributes*

The Presentation LUT SOP class interprets the following status codes:

| Service Status | Meaning | Error Codes |
|---|---|---|
| Warning | Requested MinDensity or MaxDensity outside of HCD's operating range. HCD will use its respective minimum or maximum density value instead. | B605 |
| Success | Presentation LUT successfully created | 0000 |

*Table 44.       Presentation LUT SOP response status*

## 11.1.2.1.3.6  Printer SOP Class

The Printer SOP Class is the possibility to monitor the status of the hardcopy printer in a synchronous and an asynchronous way.

The SCU uses the mandatory N-EVENT Report DIMSE service to monitor the changes of the printer status in an asynchronous way.

It can directly ask the Printer (SCP) for its status or receive Events from the Printer asynchronously:

-      N-GET as SCU

N-EVENT-REPORT as SCU In both cases the following information is supported:

| Event-type Name | Event | Attributes | Tag | Usage SCU |
|---|---|---|---|---|
| Normal | 1 | | | |
| Warning | 2 | Printer Status Info | (2110,0020) | U |
| Failure | 3 | Printer Status Info | (2110,0020) | U |

*Table 45.       Used Printer N-EVENT Report attributes*

### 11.1.2.1.3.6.1   Mandatory Printer N-GET-RSP, N-EVENT-REPORT-RQ attributes

| Attribute Name | Tag | Usage SCP | Supported Values |
|---|---|---|---|
| Printer Status | (2110,0010) | M | NORMAL, FAILURE, WARNING |
| Printer Status Info | (2110,0020) | M | See tables in Annex for details. |

*Table 46.       Mandatory Printer N-GET-RSP, N-EVENT-REPORT-RQ attributes*

**Note:**     For a detailed description on how *syngo* reacts on different printer status messages, please refer to the Annex section "DICOM Print SCU – detailed status displays".

## 11.1.2.1.3.7  Print Job SOP Class

The Print Job SOP Class is the possibility to monitor the execution of the print process.

The *syngo* DICOM Print Management application supports the optional N-EVENT-REPORT DICMSE Service to receive the changes of the Print Job Status in an asynchronous way.

It can receive Events from the Print SCP asynchronously.

**Note**: syngo does not support receiving N-EVENT from camera during print sessions, normally this is configurable in the camera.

N-EVENT-REPORT The following information is supported:

| Event-type Name | Event | Attributes | Tag | Usage SCU |
|---|---|---|---|---|
| Normal | 1 | Execution Status Info | (2100,0030) | U |
| | | Print Job ID | (2100,0010) | -- (Print Queue Management SOP Class not supported) |

## 11.1.3    Association Acceptance Policy

Not applicable

# 12.    Implementation Model Worklist

The Basic Worklist Management Service class defines an application-level class of service, which facilitates the transfer of worklists from the information system to the imaging modality. The worklist is queried by the AE and supplies the SCU with the scheduled tasks, which have to be performed on the modality. The COHERENCE DICOM worklist application supports the worklist service as SCU.

## 12.1  Application Data Flow Diagram

The COHERENCE DICOM network implementation acts as SCU for the Basic Worklist Service using the Modality Worklist SOP Class. The product target Operating System is Microsoft Windows XP Professional with Service Pack 1.
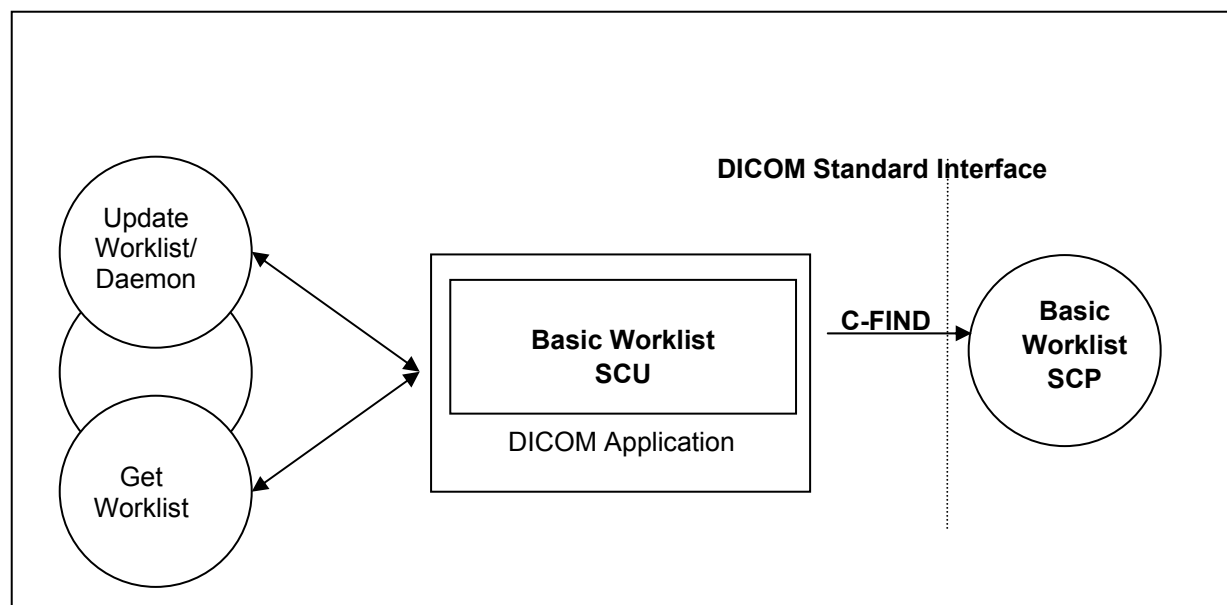

*Figure 7.        COHERENCE Application Flow Diagram – Basic Worklist SCU*

## 12.2   Functional Definitions of Application Entities

The worklist SCU ("broad query") is invoked from the patient browser user interface or by timer to request the worklist from a remote Information System (Modality Worklist Class SCP). This is done to perform a match to the internal worklist query keys specified in the C-Find DIMSE service issued for the Modality Worklist Model.

The worklist SCP responses to the C-FIND query and scheduled imaging service requests (scheduled procedure steps) and patient demographic information will be downloaded from the information system to the COHERENCE modality. All information retrieved will be hold in the scheduling database for usage during Patient registration procedure.

Furthermore the patient based Query dialog from the patient browser allows to enter specific matching criteria ("narrow query") for the issue worklist query. With the response data the Patient Registration dialog can be populated according availability within the worklist response identifier.

## 12.3   Sequencing of Real-World Activities

The "narrow" (interactive) Worklist Query requires that sufficient matching keys or a unique matching key are/is entered before the query is issued. Only then a single response can be expected to complete the registration dialog.

# 13.   Application Entity Specification Worklist

## 13.1   Modality Worklist Service AE Specification

The Modality worklist SCU (patient registration in conjunction with the network application) requests that the remote SCP performs a match of all keys specified in the query against the information in its worklist database.

The COHERENCE DICOM network implementation acts as SCU for the Basic Worklist Service using the Modality Worklist SOP Class:

| SOP Class Name | SOP Class UID |
|---|---|
| Modality Worklist Information Model - FIND | 1.2.840.10008.5.1.4.31 |

*Table 48.        Modality Worklist Information Model class as an SCU*

## 13.1.1 Association Establishment Policies

### 13.1.1.1      General

It is possible to configure a cyclic update of the modality scheduler database through a background worklist request with date/time and modality information.

In addition the user can request worklist update with "Update Worklist". No duplicate entries will be added in the Scheduler DB. Entries are uniquely identified by the Study Instance UID (0020,000D) for the Requested Procedure and the SPS ID (0040,0009) in the SPS Sequence (0040,0100).

An interactive worklist query can be issued with search criteria entered in the patient based Query dialog from the patient browser.

The default PDU size used will be 28 KB.

### 13.1.1.2      Number of Associations

The COHERENCE DICOM application initiates one association at a time to query worklist entry data.

### 13.1.1.3      Asynchronous Nature

The COHERENCE DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

### 13.1.1.4      Implementation Identifying Information

| COHERENCE product | Implementation Class UID | Implementation Version Name |
|---|---|---|
| Dosimetrist v2.2 | 1.3.12.2.1107.5.9.20000101 | SIEMENS_SWFVE10B |
| *Other* | 1.3.12.2.1107.5.5.9.20010101 | SIEMENS_SWFVD20L |

## 13.1.2 Association Initiation Policy

The network application will cyclically query the worklist and by request of patient registration interface. Ever then it establishes an association by using the DICOM association services. During association establishment the negotiation of SOP classes to exchange the capabilities of the SCU and the SCP is not supported.

The following DIMSE-C operation is supported as SCU:

-    C-FIND

### 13.1.2.1      Real-World Activity

### 13.1.2.1.1    Associated Real-World Activity - Query (Update) Worklist

A network application will perform worklist queries with the C-FIND request at regular intervals. In addition it can be triggered by immediate request. The received worklist items will be compared with the contents of the local scheduler database. New items will be inserted into scheduler database.

After each broad-query, all RP/SPS that were canceled or rescheduled to another modality at the RIS will be automatically removed from the Scheduler DB if :

- the Examination of this procedure has not been started or finished yet, and

- the corresponding configuration item "Automatic removal of canceled/rescheduled Request" was checked in the Service UI under DICOM/HIS-RIS Node.

No automatic clean-up of the scheduler DB is performed after a Patient base Query since the worklist received does not give the complete list of all currently scheduled procedures for the modality.

### 13.1.2.1.2    Proposed Presentation Contexts

The COHERENCE DICOM application will propose Presentation Contexts as shown in the following table:

| Presentation Context Table | | | | | |
|---|---|---|---|---|---|
| Abstract Syntax | | Transfer Syntax | | Role | Ext. Neg. |
| Name | UID | Name List | UID List | | |
| Modality Worklist Information Model- FIND | 1.2.840.10008.5.1.4.31 | Implicit VR Little Endian Explicit VR Little Endian Explicit VR Big Endian | 1.2.840.10008.1.2 1.2.840.10008.1.2.1 1.2.840.10008.1.2.2 | SCU | None |

*Table 49.    Presentation Context – Query (Update) Worklist*

### 13.1.2.1.3    SOP Specific Conformance Statement

- Search Key Attributes of the Worklist C-FIND

The COHERENCE DICOM worklist SCU supports "broad worklist queries" with all required search keys. The following tables describe the "broad query" search keys that the SCU supports.

| Attribute Name | Tag | Matching Key Type | Query Value |
|---|---|---|---|
| Scheduled Procedure Step | | | |
| Scheduled Procedure Step Sequence | (0040,0100) | R | |
| >Scheduled Station AE Title | (0040,0001) | R | <own AET> or "*"[a] |
| >Scheduled Procedure Step Start Date | (0040,0002) | R | <act. Date>-<act. Date> or range from UI[b] |
| >Scheduled Procedure Step Start Time | (0040,0003) | R | <zero length> or range from UI[b] |
| >Modality | (0008,0060) | R | "*" or <own Modality>[a] |

*Table 50.    "broad query" search keys supported by SCU*

- Return Key Attributes of the Worklist C-FIND

The COHERENCE DICOM worklist SCU supports worklist queries with return key attributes of all types. The following tables describe the return keys that the SCU supports.

An "x" in the **UI** column will indicate the attribute is visualized when browsing the Worklist results with Patient Browser and/or during Patient Registration. The Patient Browser display is additionally influenced by the related Browser configuration.

---

[a] This depends on user configuration (Options->Configuration->Patient Registration) if the "own AET" is provided or not. Use the "HIS/RIS" tabcard for configuration.
[b] It depends on user configuration (Options->Configuration->Patient Registration) if the actual Date with a full time range or an interactive input dialog for date/time specification is used.

A tag in the **IOD** column will indicate that the related attribute is included into the SOP Instances of the IOD's created during processing of this worklist request.

A tag in the **MPPS** column will indicate that the related attribute is included into the SOP Instances of the MPPS objects created during processing of this worklist request. ( See also the tables "Attributes used for the Performed Procedure Step N-CREATE" and "Attributes used for the Performed Procedure Step N-SET".)

## 13.1.2.1.4   Associated Real-World Activity – Get Worklist

With "Get Worklist" in the patient based Worklist Query dialog, the entered attributes are used to form a worklist request identifier. With the response data the Patient Registration dialog can be updated to perform examination in advance. The response data are additionally placed in the scheduler database

## 13.1.2.1.5   Proposed Presentation Contexts – Get Worklist

This RWA will propose the same Presentation Contexts as with "Update Worklist". Please see table in section 13.1.2.1.2.

### 13.1.2.1.6.1  Search Key Attributes of the Worklist C-FIND

The COHERENCE DICOM worklist SCU supports "narrow worklist queries" with all required search keys. The following tables describe the "narrow query" search keys that the SCU supports.

| Attribute Name | Tag | Matching Key Type | Query Value |
|---|---|---|---|
| Scheduled Procedure Step | | | |

Please see list for "Update Worklist" RWA.

## 13.1.2.1.6.3  Status Codes of the Worklist C-FIND

The worklist SCU interprets following status codes:

| Service Status | Meaning | Error Codes | Related Fields |
|---|---|---|---|
| Refused | Out of Resources | A700 | (0000,0902) |
| Failed | Identifier does not match SOP Class | A900 | (0000,0901) (0000,0902) |
| | Unable to process | Cxxx | (0000,0901) (0000,0902) |
| Cancel | Matching terminated due to Cancel request | FE00 | None |
| Success | Matching is complete - No final Identifier is supplied | 0000 | None |
| Pending | Matches are continuing - Current Match is supplied and any Optional Keys were supported in the same manner as Required Keys | FF00 | Identifier |
| | Matches are continuing - Warning that one or more Optional Keys were not supported for existence and/or matching for this identifier | FF01 | Identifier |

# 14.   Implementation Model MPPS

The Modality Performed Procedure Step Service class defines an application-level class of service which facilitates the transfer of procedure, billing and radiation dose information from the imaging modality to the information system. The Performed Procedure Step is created and set by the AE and supplies the SCP with the information about a real-world procedure, which is performed on the modality. The COHERENCE DICOM Modality Performed Procedure Step application supports the MPPS service as SCU.

## 14.1   Application Data Flow Diagram

The COHERENCE DICOM network implementation acts as SCU for the Modality Performed Procedure Step SOP Class. The product target Operating System is Microsoft Windows XP Professional with Service Pack 1.
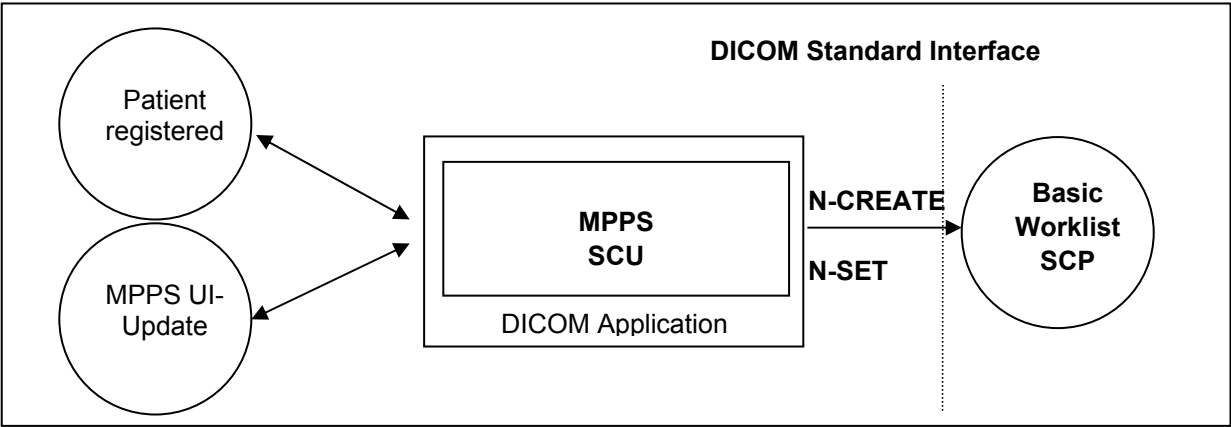

*Figure 8.    Application Flow Diagram – MPPS SCU*

## 14.2   Functional Definitions of Application Entities

With registering a Patient (i.e. a Scheduled Procedure Step from Worklist), the COHERENCE DICOM application will create a MPPS Instance and communicate it to the MPPS SCP.

Furthermore a manual update can be performed with the COHERENCE MPPS user interface. Only there it is possible to set the state of the MPPS to "Completed" or "Discontinued". If done so, the DICOM application will no longer allow updates on the related MPPS Instance.

The COHERENCE will not only allow a "1:1 -relationship" of Scheduled Procedure Steps and Performed Procedure Steps, but also supports the "simple group-case" (grouping several SPS of the same Requested Procedure) , "complex group-case" (grouping several SPS from different Requested Procedures) and "append case" from the respective IHE-scenarios.

The COHERENCE will support creation of "unscheduled cases" by allowing MPPS Instances to be communicated for locally registered Patients.

# 15.   AE Specification MPPS

## 15.1   Modality Performed Procedure Step AE Specification

The Modality Performed Procedure Step SCU (Patient Registration and MPPS UI) provide information about a performed real-world Procedure to a remote SCP (Information System).

SIEMENS COHERENCE DICOM products provide Standard Conformance to the following DICOM V3.0 SOP Class as an SCU:

| SOP Class Name | SOP Class UID |
|---|---|
| Modality Performed Procedure Step | 1.2.840.10008.3.1.2.3.3 |

*Table 54.    Modality Performed Procedure Step SOP Class as an SCU*

### 15.1.1 Association Establishment Policies

### 15.1.1.1      General

The creation of MPPS Instance is done automatically by COHERENCE whenever a patient is registered for image acquisition through the Patient Registration dialog.

Further updates on the MPPS data can be done interactively from the related MPPS user interface. The MPPS "Complete" or "Discontinued" states can only be set from user interface.

The default PDU size used will be 28 KB.

### 15.1.1.2 Number of Associations

The COHERENCE DICOM application initiates one association at a time to create or set MPPS instance.

### 15.1.1.3 Asynchronous Nature

The COHERENCE DICOM software does not support asynchronous communication (multiple outstanding transactions over a single association).

### 15.1.1.4 Implementation Identifying Information

| COHERENCE product | Implementation Class UID | Implementation Version Name |
|---|---|---|
| Dosimetrist v2.2 | 1.3.12.2.1107.5.9.20000101 | SIEMENS_SWFVE10B |
| *Other* | 1.3.12.2.1107.5.5.9.20010101 | SIEMENS_SWFVD20L |

## 15.1.2 Association Initiation Policy

The COHERENCE DICOM Application Entity acts as a Service Class User (SCU) for the

1. Modality Performed Procedure Step Service Class (to notify a RIS about status of a procedure while it is performed).

To do so, the COHERENCE will issue a

2. N-CREATE DIMSE according to the CREATE Modality Performed Procedure Step SOP Instance operation or a

3. N-SET DIMSE to update the contents and state of the MPPS according to the SET Modality Performed Procedure Step Information operation.

### 15.1.2.1 Real World Activity

### 15.1.2.1.1 Associated Real-World Activity - Patient registered

A patient is registered by the Patient Registration "Exam" action. From this event the trigger to create a MPPS Instance is derived. The related Instance is then immediately communicated to the configured RIS system. An association is established and the MPPS Instance is sent.

### 15.1.2.1.2 Proposed Presentation Contexts - Patient registered

The COHERENCE DICOM application will propose Presentation Contexts as shown in the following table:

| Presentation Context Table | | | | | |
|---|---|---|---|---|---|
| Abstract Syntax | | Transfer Syntax | | Role | Ext. Neg. |

### 15.1.2.1.3 SOP Specific Conformance Statement- Patient registered

#### 15.1.2.1.3.1 Attributes used for the Performed Procedure Step N-CREATE

The Siemens COHERENCE DICOM Modality Performed Procedure Step SCU informs the remote SCP when the examination of a scheduled procedure step will be performed (i.e. the patient is registered). The N-CREATE message is sent when the examination is started with successful registration of the patient data. The following table describes the supported attributes of a N-CREATE message.

## 15.1.2.1.4    Associated Real-World Activity – MPPS UI-Update

With the MPPS UI the status of the MPPS Instance can be set to "COMPLETED" or "DISCONTINUED". There is no cyclic update during performance of the procedure.

### 15.1.2.1.5    Proposed Presentation Contexts – MPPS UI-Update

This RWA will propose the same Presentation Contexts as with "Patient registered". Please see table in section 15.1.2.1.2.

#### 15.1.2.1.6.1  Attributes used for the Performed Procedure Step N-SET

The Siemens COHERENCE DICOM Modality Performed Procedure Step SCU informs the remote SCP about the performed examination and ist status. The N-SET message is sent only per ended examination (finished status "COMPLETED" or incomplete status "DISCONTINUED"). The following table describes the supported attributes of a N-SET message.

| Attribute Name | Tag | Type | Value |
|---|---|---|---|
| Performed Procedure Step Information | | | |
| Performed Procedure Step Status | (0040,0252) | 3 | "COMPLETED" or "DISCONTINUED" |

# 16.    Communication Profiles

## 16.1    Supported Communication Stacks

The Siemens COHERENCE DICOM application provides DICOM V3.0 TCP/IP Network Communication Support as defined in Part 8 of the DICOM Standard.
The product target Operating System is Microsoft Windows XP Professional with Service Pack 1.

### 16.1.1 TCP/IP Stack

The COHERENCE DICOM application uses the TCP/IP stack from the target operating system upon which it executes. It uses the MergeCOM-3 subroutine library from Merge Technologies Inc. that is based on a Berkeley socket interface.

### 16.1.1.1    API

The COHERENCE DICOM application uses the Merge COM library that is based on a TCP/IP socket interface.

### 16.1.1.2    Physical Media Support

The COHERENCE DICOM application is indifferent to the physical medium over which TCP/IP executes; it inherits this from the target operating system upon which it executes.

# 17.    Extensions / Specializations / Privatizations

## 17.1    Standard Extended / Specialized / Private SOPs

Please refer to Annex for further information on these topics. A detailed overview is given there.

## 17.2    Private Transfer Syntaxes

Not applicable

## 18. Configuration

### 18.1 AE Title/Presentation Address Mapping

To ensure unique identification within the network the hostname should be used as part of the AE Titles (see examples below, hostname = name1). The string can be up to 16 characters long and must not contain any extended characters, only 7-bit ASCII characters (excluding Control Characters) are allowed according to DICOM Standard.

**Note**:     The current implementation of syngo does not support the full DICOM Standard. Spaces and special characters (like &<> ") in the AE title string are not supported.

### 18.1.1 DICOM Verification

The Verification Service uses the AE configuration of the DICOM Service that is checked with the C-ECHO message. E.g. Verification will use the Storage AE, if initiated to check the configuration of a remote DICOM node.

### 18.1.2 DICOM Storage AE Title

Within syngo there are local application entity titles for HIS/RIS,  Study Transfer and Print. They can be configured via Service-UI in Configuration / DICOM / General (e.g. STU_NAME1).

The port number is set to the fixed value of 104.

### 18.1.3 DICOM Query/Retrieve AE Title

The DICOM Query/Retrieve application uses the same application entity title as the DICOM Storage AE.

### 18.1.4 DICOM Print AE Title

The DICOM Print application provides the application entity title:

e.g. PRI_NAME1  *(No input of AETs starting with a numeric character is possible)*

### 18.2 Configurable Parameters

The Application Entity Titles, host names and port numbers for remote AE are configured using the COHERENCE Service/Installation Tool. For each AET the list of services supported can be configured.

### 18.2.1 Storage, Storage Commitment and Query/Retrieve

The COHERENCE Service/Installation Tool can be used to set the AET's, port-numbers, host-names, IP-addresses and capabilities for the remote nodes (SCP's). The user can select transfer syntaxes, compression modes and query models for each SCP separately.

- A quality factor which determines the proposed transfer syntax in case that a user has initiated the C-STORE. By convention, 0 means: Only Uncompressed Transfer Syntax(es) are proposed, 100 means: Lossless Transfer Syntax is proposed, and any other value between 1 and 99 means that an JPEG Lossy Transfer Syntax is proposed. One Uncompressed Transfer Syntax will be proposed in any case. This parameter is general for all destination nodes.

- A "compression type supported" which determines the proposed transfer syntax in case that the C-STORE was initiated as a sub-operation of an incoming C-MOVE-RQ. By convention, 0 means: Only Uncompressed Transfer Syntax(es) are proposed, 1 means: Lossless Transfer Syntax is proposed, and 2 means that an JPEG Lossy Transfer Syntax is proposed. One uncompressed transfer syntax will be proposed in any case. This parameter can be set for each configured destination node.

**Additional configurable parameters for Storage Commitment are:**

**When acting as SCU:**

- A flag to indicate whether the association will be kept open to receive the response or to close the association and be prepared to receive the response on another association.

- Time-out which defines how long the association of N-ACTION is kept to receive a N-EVENT-REPORT on the same association. The same value is used to wait for a N-EVENT-REPORT on an other association. (default 1 h)

**When acting as SCP:**

- flag to indicate if an archive system is installed

## 18.2.2 Print

The COHERENCE Service/Installation Tool can be used to configure the SCP (DICOM-Printer).

These parameters are mandatory to set:

- AET,

- host-name,

- IP-address and

- Port-number.

These parameters have defaults as per configuration file and can be changed:

- default camera (yes/no),

- pixel size,

- additional or changed film sheet formats (e.g. inch 14x14, inch 14x17, ...),

- list with mapping pixel size to each film sheet format,

- minimal density,

- stored printed film jobs,

- media  type,

- film destination.

## 18.2.3 Modality Worklist

The Service application can be used to set the AETs, port numbers, host names, IP addresses, capabilities and time-outs for the remote nodes (SCPs)

**Additional configurable parameters for Modality Worklist Query are:**

- Query Waiting time - the time to wait for the C-FIND-RSP after sending the C-FIND-RQ (default 20 sec.)

- Max Query Match Number - the maximum number of entries accepted in one worklist (default is 200)

- Query Interval: the time between two C-FIND-RQ to the Hospital Information system (default is 60 min.)

- Broad Worklist Query behaviour (two values are defined):

   ● Set the AE Title search attribute to the own AE Title, and the Modality search attribute to "*".

   ● Set the Modality search attribute to the own modality and the AE Title search attribute to "*".

### 18.3 Default Parameters

This installation tool also uses some default parameters:

- max PDU size set to 262144 Bytes (256 kB)

- time-out for accepting/rejecting an association request: 60 s

- time-out for responding to an association open/close request: 60 s

- time-out for accepting a message over network: 60 s

- time-out for waiting for data between TCP/IP-packets: 60 s

- The time-outs for waiting for a Service Request/Response message from the remote node are as follows:

- for Storage SCP/SCU: 600 s

- for Storage Commitment SCU:
  time-out for Response to N-ACTION: 600 s

- for Query/Retrieve SCP/SCU: 600 s

- for Print Management SCU:

  - time-out for Response to N-SET-RQ: 240 s

  - time-out for Response to other Requests: 60 s

# 19. Support of Extended Character Sets

The COHERENCE DICOM application supports the ISO 8859 Latin 1 (ISO-IR 100) character set.

Also the Japanese language character sets JIS X 0201 (ISO-IR 13 Japanese katakana and ISO-IR 14 Japanese romaji), JIS X 0208 (ISO-IR 87 Japanese kanji) and JIS X 0212 (ISO-IR 159 Supplementary Japanese kanji) are supported.

When there is a mismatch between the SCS tags (0008,0005) and the characters in an IOD received by the system, then the following measures are taken to make the characters DICOM con-form:

- Try to import with ISO_IR 100. If ISO_IR 100 fails, convert each illegal character to a '?'.

## Media Storage Conformance Statement

## 20.    Implementation Model

### 20.1    Application Data Flow Diagram

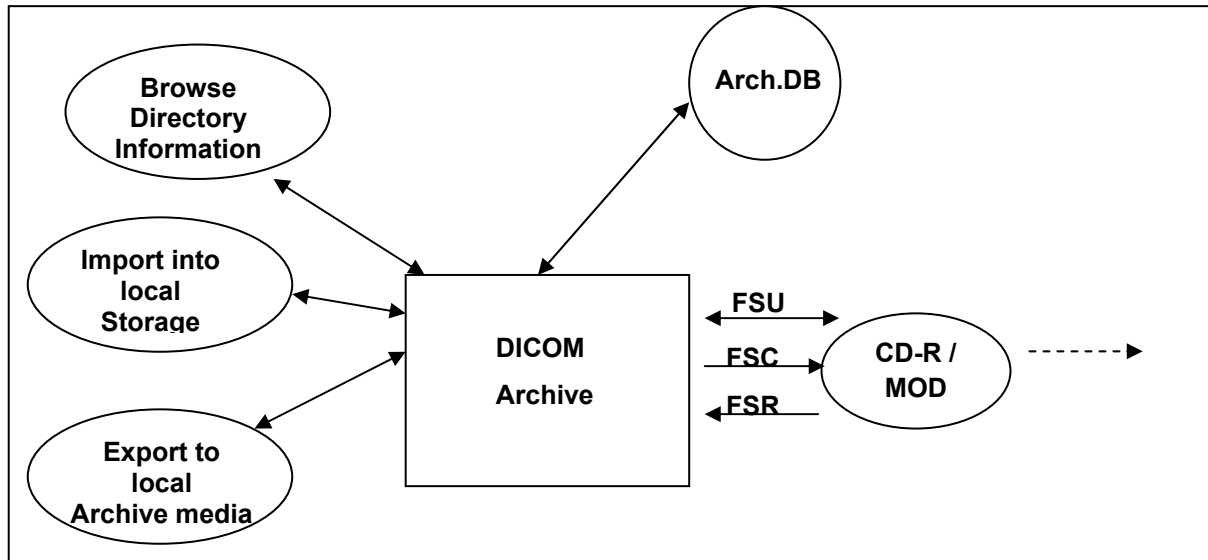

*Figure 9.         Application Flow Diagram – CDR/MOD*

The DICOM archive application will serve as an interface to the CD-R offline medium device. It serves interfaces to include the offline media directory into the browser and to copy SOP instances to a medium or retrieve SOP Instances from medium into local storage.

The DICOM Archive application will support the 120mm CD-R medium, the 130mm 2.3 GB R/W MOD and the 130mm 4.1 GB R/W MOD and 1.44 MB diskette media.

The FSU role will update new SOP Instances only to media with pre-existing File-sets conforming to the Application Profiles supported.

The contents of the DICOMDIR will be temporarily stored in Archive-Database.

### 20.2    Functional Definitions of AEs

The COHERENCE DICOM offline media storage application consists of the DICOM Archive application entity serving all interfaces to access offline media. The DICOM Archive application is capable of

- Creating a new File-set onto an unwritten medium (Export to…).

- Updating an existing File-set by writing new SOP Instances onto the medium (Export to...).

- Importing SOP Instances from the medium onto local storage

- Reading the File-sets DICOMDIR information into temporary database and pass it to display applications

### 20.3    Sequencing of Real-World Activities

The DICOM Archive application will not perform updates before the Directory information of the DICOMDIR is completely read.

When performing updates, the SOP instances are checked for existence before updating. Duplicate instances will be avoided.

## 20.4  File Meta Information Options

# 21.  AE Specifications

## 21.1  DICOM Archive Specification

The DICOM Archive provides Standard conformance to Media Storage Service Class (Interchange Option). In addition Augmented conformance is provided to store extra data attributes important for the full feature support of the COHERENCE product SW. Details are listed in following Table:

| Application Profiles Supported | Real-World Activity | Role | SC Option |
|---|---|---|---|
| PRI-SYNGO-CD<br>PRI-SYNGO-MOD23 (option)<br>PRI-SYNGO-MOD41 (option)<br>PRI-SYNGO-DVD-RAM<br>PRI-SYNGO-FD<br>AUG-GEN-CD<br>AUG-CTMR-MOD650 *1<br>AUG-CTMR-MOD12 *1<br>AUG-CTMR-MOD23 *1<br>AUG-CTMR-CD *1<br>AUG-XA1K-CD *1 | Browse Directory Information | FSR | Interchange |

| | Import into local Storage | FSR | Interchange |

*Table 60.          Application profiles, Activities, and Roles for DICOM Archive*

*1 – With no Private SOP Class used, the PRI-SYNGO-CD profile definitions are appropriate to describe the augmentation of the related -STD Profiles.

*2 - All combinations of the following values for xx, yF and xxxxxx are supported: yF={SF|MF}, xx={ID|SC|CC}, xxxxxx={FLOP|MOD128| MOD230|MOD540|MOD650|MOD12|MOD23|DVD-RAM|CDR}

On syngo-based products the Private Extended *syngo* Profile (PRI-SYNGO-CD or PRI-SYNGO-MOD23 or PRI-SYNGO-MOD41 or PRI-SYNGO-DVD-RAM or PRI-SYNGO-FD) will be preferably used by the system. The General Purpose Interchange Profile (STD-GEN-CD), Ultrasound Profile (STD-US-xxx), CT and MR Image Profile (STD-CTMR-xxx), Waveform Interchange (STD-WVFM-xxx), Basic Cardiac Profile (STD-XABC-CD) and 1024 X-Ray Angiographic Profile (STD-XA1K-CD) will be supported with read capability of the related media.

### 21.1.1 File Meta Information for the Application Entity

The Source Application Entity Title is set by configuration. See Chapter "Configuration" for details.

### 21.1.2 Real-World Activities for this Application Entity

### 21.1.2.1 Real-World Activity: Browse Directory Information

The DICOM Archive application acts as FSR using the interchange option when requested to read the media directory.

The DICOM archive application will read the DICOMDIR and insert those directory entries, that are valid for the application profiles supported, into a local database. The database can then be used for browsing media contents.

**Note:** IconImageSQ is also supported in DICOMDIR. But only those Icon Images with BitsAllocated (0028,0100) equal to 8 and size of 64x64 or 128x128 pixels are imported into database and are visible in the Browser.

### 21.1.2.1.1 Application Profiles for the RWA: Browse Directory Information

See Table in section 3.1 for the Application Profiles listed that invoke this Application Entity for the Browse Directory Information RWA.

### 21.1.2.2 Real-World Activity: Import into local Storage

The DICOM Archive application acts as FSR using the interchange option when requested to read SOP Instances from the medium into the local storage.

The SOP Instance selected from the media directory will be copied into the local storage. Only SOP Instances, that are valid for the application profile supported and are listed as supported by the Storage SCP Conformance section (Network DCS, 5.1.3), can be retrieved from media storage. This is due to the fact that the Browse Directory Information will filter all SOP Instances not matching the Application profiles supported.

***During operation no "Attribute Value Precedence" is applied to the SOP Instances. Detached Patient Management is not supported (please refer to DICOM Part 11, Media Storage Application Profiles).***

For media conforming to the STD-GEN-CD Profile the following SOP classes will be supported as an FSR:

### 21.1.2.2.1    Application Profiles for the RWA: Import into local Storage

See Table in section 21.1 for the Application Profiles listed that invoke this Application Entity for the Import into Local Storage RWA.

## 21.1.2.3    Real-World Activity: Export to local Archive Media

The DICOM Archive application acts as FSU (for media with existing DICOM file-set) or FSC (media not initialized) using the interchange option when requested to copy SOP Instances from the local storage to local Archive Medium.

The DICOM Archive application will receive a list of SOP Instances to be copied to the local archive medium. According to the state of the medium inserted (new medium, Medium with DICOM file-set) the validity of the SOP Instances according to the applicable profile is checked. Only valid SOP Instances are accepted.

When the DICOM archive application is requested to copy SOP Instances the preferred application profile according configuration (<modify AUG-XA1K-CD> or PRI-SYNGO-xxx) will be used to validate and copy the referred SOP Instances. When creating a new file-set no Descriptor File will be allocated and the related ID is not used.

The DICOM archive application will not close the medium.

### 21.1.2.3.1    Application Profiles for the RWA: Export to local Archive Media

See Table in section 21.1 for the Application Profiles listed that invoke this Application Entity for the Export to local Archive Media RWA.

# 22. Augmented and Private Profiles

## 22.1 Augmented Application Profiles

### 22.1.1 AUG-GEN-CD

**With no private Siemens Non-Images stored onto Medium, the definitions of the PRI-SYNGO-CD Profile are applicable to denote the augmentations for the STD-GEN-CD Standard Profile.**

Storage of Private Information Objects will only be supported with reference to a Private Application Profile (see next section).

The Siemens non-image is typically used for raw data and 3D private data.

### 22.1.2 AUG-CTMR-xxxxx

**With no private Siemens Non-Images stored onto Medium, the definitions of the PRI-SYNGO-CD Profile are applicable to denote the augmentations for the STD-CTMR-MOD650, STD-CTMR-MOD12, STD-CTMR-MOD23 and STD-CTMR-CDR Standard Profiles.**

Storage of Private Information Objects will only be supported with reference to a Private Application Profile (see next section).

### 22.1.3 AUG-XA1K-CD

**With no private Siemens Non-Images stored onto Medium, the definitions of the PRI-SYNGO-CD Profile are applicable to denote the augmentations for the STD-XA1K-CD Standard Profile.**

Storage of Private Information Objects will only be supported with reference to a Private Application Profile (see other section).

### 22.1.4 *syngo*® Private Offline Media Application Profile

This contains a *syngo* specific Application Profile.

Structure of this Application Profile is defined in Part 11 of the 2003 DICOM Standard.

It is needed to describe the requirements for Offline Media Storage of the private IOD (Non-Image IOD).

### 22.1.5 Class and Profile Identification

This document defines an Application Profile Class for "*syngo*® speaking[a]" modalities or applications.

The identifier for this class shall be PRI-SYNGO. This class is intended to be used for interchange of extended and private Information Objects via CD-R or re-writeable magneto-optical disk (MOD) offline media between dedicated acquisition or workstation modalities built from common *syngo* architecture.

The specific application profiles in this class are shown in Table below:

| Application Profile | Identifier | Description |
|---|---|---|
| "*syngo* speaking" System on CD-R | PRI-SYNGO-CD | Handles interchange of Composite SOP Instances and privately defined SOP Instances (Siemens Non-Image IOD). |
| "*syngo* speaking" System on 2.3 GB MOD | PRI-SYNGO-MOD23 | Handles interchange of Composite SOP Instances and privately defined SOP Instances (Siemens Non-Image IOD). |
| "*syngo* speaking" System on 4.1 GB MOD[b] | PRI-SYNGO-MOD41 | Handles interchange of Composite SOP Instances and privately defined SOP Instances (Siemens Non-Image IOD). |

---

[a] *syngo* is a registered trademark of Siemens AG.
[b] Definition of this profile is done due to approval of DICOM Supplement 62.

| "*syngo* speaking" System on 4.7 GB DVD RAM | PRI-SYNGO-DVD-RAM | Handles interchange of Composite SOP Instances and privately defined SOP Instances (Siemens Non-Image IOD). |
|---|---|---|
| "*syngo* speaking" System on Floppy Disk | PRI-SYNGO-FD | Handles interchange of Waveform SOP Instances and privately defined SOP Instances (Siemens Non-Image IOD). |

*Table 62.    Application profile for PRI-SYNGO SOP Classes*

Equipment claiming conformance for this syngo Application Profile Class shall make a clear statement on handling of the private defined SOP Instances.

## 22.1.6 Clinical Context

This application profile facilitates the interchange of original acquired and derived images and private data related to them. Typical media interchange would be from in-lab acquisition equipment to dedicated workstations and archive systems with specific extensions to handle the private data objects (in both directions).

Additionally, images (from MR,CT,US,NM,DX,RF) used to prepare procedures, multi-modality images (e.g. integrated US) and images derived from primary diagnostic images, such as annotations, quantitative analysis images, reference images, screen capture images may be interchanged via this profile.

### 22.1.6.1    Roles and Service Class Options

This Application Profile uses the Media Storage Service Class defined in PS 3.4 with the Interchange Option.

The Application Entity shall support one or more of the roles of File Set Creator (FSC), File Set Reader (FSR), and File Set Updater (FSU), defined in PS 3.10.

#### 22.1.6.1.1    File Set Creator

The Application Entity acting as a File-Set Creator generates a File Set under the PRI-SYNGO Application Profiles.

File Set Creators shall be able to generate the Basic Directory SOP Class in the DICOMDIR file with all the subsidiary Directory Records related to the Image SOP Classes and Private SOP Classes stored in the File Set.

In case of the PRI-SYNGO-CD profile, the FSC shall offer the ability to either finalize the disc at the completion of the most recent write session (no additional information can be subsequently added to the disc) or to allow multi-session (additional information may be subsequently added to the disc).

**Note:**    A multiple volume (a logical volume that can cross multiple physical media) is not supported by this Application Profile Class. If a set of Files, e.g., a Study, cannot be written entirely on one CD-R, the FSC will create multiple independent DICOM File-Set such that each File-Set can reside on a single CD-R medium controlled by its individual DICOMDIR file. The user of the FSC can opt to use written labels on the discs to reflect that there is more than one disc for this set of files (e.g., a Study).

#### 22.1.6.1.2    File Set Reader

The role of the File Set Reader shall be used by Application Entities which receive the transferred File Set.

File Set Readers shall be able to read all the defined SOP Instances files defined for the specific Application Profiles to which a conformance claim is made, using all the defined Transfer Syntaxes.

#### 22.1.6.1.3    File Set Updater

The role of the File Set Updater shall be used by Application Entities, which receive a transferred File Set and update it by the addition of processed information.

File Set Updaters shall be able to read and update the DICOMDIR file. File-Set Updaters do not have to read the image/private information objects. File-Set Updaters shall be able to generate any of the SOP Instances files defined for the specific Application Profiles to which a conformance claim is made, and to read and update the DICOMDIR file.

In case of the PRI-SYNGO-CD profile, the FSU shall offer the ability to either finalize a disc at the completion of the most recent write session (no additional information can be subsequently added to the disc) or to allow multi-session (additional information may be subsequently added to the disc).

**Note (for CD-R):** If the disc has not been finalized, the File-Set Updater will be able to update information assuming there is enough space on the disc to write a new DICOMDIR file, the information, and the fundamental CD-R control structures. CD-R control structures are the structures that inherent to the CD-R standards; see PS 3.12

## 22.1.7 PRI-SYNGO Profiles

## 22.1.7.2    Physical Media and Formats

The PRI-SYNGO-CD Profile requires the 120mm CD-R physical media with the ISO/IEC 9660 Media Format, as defined in PS3.12.

The PRI-SYNGO-MOD23 Profile requires the 130mm 2.3 GB R/W MOD physical medium with the PCDOS Media Format, as defined in PS3.12.

The PRI-SYNGO-MOD41 Profile requires the 130mm 4.1 GB R/W MOD physical medium with the PCDOS Media Format, as defined in  PS 3.12.

The PRI-SYNGO-DVD-RAM Profile requires the 120mm DVD-RAM physical media according to "DVD Specifications for Rewritable Disc (DVD-RAM 4.7GB): Part 1 – Physical Specifications Version 2.0" and "Part 2- File System Specifications Version 2".

The PRI-SYNGO-FD Profile requires the 1.44 MB diskette physical medium with the PCDOS Media Format, as defined in PS3.12.

## 22.1.7.3    Directory Information in DICOMDIR

Conforming Application Entities shall include in the DICOMDIR File the Basic Directory IOD containing Directory Records at the Patient and subsidiary levels appropriate to the SOP Classes in the File-set. All DICOM files in the File-set incorporating SOP Instances defined for the specific Application profile shall be referenced by Directory Records.

**Note:**    DICOMDIRs with no directory information are not allowed by this Application Profile
Privately defined IODs will be referenced by "PRIVATE" Directory Records.

## 22.1.7.3.1    Basic Directory IOD Specialization

This Application Profile makes use of optional attributes of the Basic Directory IOD to support recognition of Patient's Storage Service request results in spanning multiple volumes (file sets). Therefore the File Set Descriptor File can be used and is then referenced by optional Basic Directory IOD attributes. If existent, the specified Descriptor File may be used by FSR applications. Any FSU, FSC shall make a clear Statement if the Descriptor File mechanism is used according to the specialization defined in this Application Profile.

The Descriptor Files shall have the following contents:

One single Line without any control-characters and according to the Basic Character-Set having the following defined text:

"MULTIVOLUME: xx of yy"

xx, yy are replaced by the actual Number of the volume (xx) and the Total Number of Volumes in the set (yy).

If used, the Descriptor File shall have the File ID "README" and reside in same directory level as the DICOMDIR. It is referenced by the attribute [0004,1141] File-set Descriptor File ID having the defined content of  "README".

## 22.1.7.3.2   Additional Keys

File-set Creators and Updaters are required to generate the mandatory elements specified in PS 3.3, Annex F of the DICOM Standard. Table below:PRI-SYNGO-CD Additional DICOMDIR Keys specifies the additional associated keys. At each directory record level other additional data elements can be added, but it is not required that File Set Readers be able to use them as keys. Refer to the Basic Directory IOD in PS 3.3.

### 22.1.7.3.3    Private Directory Record Keys

Private Directory Records are supported by this Application Profile Class at the following Level - IMAGE. The PRIVATE Directory Records will have required elements in addition to the mandatory elements specified in PS 3.3.

The following table will list the additional required keys for PRIVATE Directory Records:

| Key Attribute | Tag | Directory Record Level | Type | Notes |
|---|---|---|---|---|
| Private Record UID | (0004,1432) | PRIVATE | 1 | See Conformance Statement |
| SOP Class UID | (0008,0016) | PRIVATE | 1C | required, if present in SOP Instance |

*Table 65.      PRI-SYNGO Additional PRIVATE Record Keys*

### 22.1.7.3.4    Icon Images

Directory Records of type SERIES or IMAGE may include Icon Images. The Icon Image pixel data shall be as specified in PS 3.3 "Icon Image Key Definition", and restricted such, that Bits Allocated (0028,0100) and Bits Stored (0028,0101) shall be equal 8, and Rows (0028,0010) and Columns (0028,0011) shall be equal to 128 for XA Images and 64 for all other Images. The Photometric Interpretation (0028,0004) shall always be restricted to "MONOCHROME2".

PRIVATE Directory Records will not contain Icon Image information.

### 22.1.7.4     Other Parameters

This section defines other parameters common to all specific Application Profiles in the PRI-SYNGO class which need to be specified in order to ensure interoperable media interchange.

### 22.1.7.4.1    Multi-Frame JPEG Format

The JPEG encoding of pixel data shall use Interchange Format (with table specification) for all frames.

### 22.1.7.4.2    Attribute Value Precedence

The values of attributes contained in a Detached Patient Management SOP Instance referenced by a DICOMDIR PATIENT Directory Record shall take precedence over the values of those attributes contained in the SOP Instance referenced by a subsidiary Directory Record. The DICOMDIR Directory Records shall have key attribute values in accordance with this precedence.

**Note:**     This allows patient identification and demographic information to be updated without changing the composite Image IOD files. The DICOMDIR file thus is critical in establishing the link between the updated information and the image. As an example, at the time an Image file was written, the patient's name therein was incorrect, or inconsistent with the Hospital Information System records. Subsequently, a Detached Patient Management file with the corrected name is added to the file-set. The FSR should use the name from the Patient File rather than in the Image File.

# 23.   Extensions, Specialization and Privatization of SOP Classes and Transfer Syntaxes

The SOP Classes listed refer in majority to those created by the equipment to which this conformance Statement is related to. For SOP classes not listed in this section, please refer to the Storage section of the DICOM Conformance Statement of the product. This will include all SOP Instances that can be received and displayed and therefore will be included into offline media storage even though these SOP Instances are not created by the equipment serving the Media Storage Service.

## 23.1   SOP Specific Conformance Statement for Basic Directory

### 23.1.1 Extension, Specialization for SIEMENS Non-Image Objects

According to the PRI-SYNGO Application Profile Class the usage of the Private Creator UIDs and further optional keys for the Directory Records referring to SIEMENS Non-Image Objects are listed in the following tables.

| Attribute | Tag | Value used |
|---|---|---|
| Private Record UID | (0004,1432) | 1.3.12.2.1107.5.9.1 |
| SOP Class UID | (0008,0016) | 1.3.12.2.1107.5.9.1 |

*Table 66.      Basic Directory Extension for Non-Image Objects*

For those "Non-Images" no Icon Image Sequence will be generated.

# 24.   Configuration

## 24.1   AE Title Mapping

### 24.1.1 DICOM Media Storage AE Title

The DICOM Storage application provides the application entity title:

CsaImageManager

# 25.   Support of Extended Character Sets

The Siemens COHERENCE DICOM archive application supports the ISO 8859 Latin 1 (ISO-IR 100) character set.

Also the Japanese language character sets JIS X 0201 (ISO-IR 13 Japanese katakana and ISO-IR 14 Japanese romaji), JIS X 0208 (ISO-IR 87 Japanese kanji) and JIS X 0212 (IOS-IR 159 Supplementary Japanese kanji) are supported.

When there is a mismatch between the SCS tags (0008,0005) and the characters in an IOD received by the system, then the following measures are taken to make the characters DICOM conform:

-    Try to import with ISO_IR 100. If ISO_IR 100 fails, convert each illegal character to a ʼ?ʼ.ANNEX

# Appendix

### A.1 SIEMENS Private Non-Image IOD

For encoding binary data-streams not representing image data, Siemens has created a private "Non-Image IOD" according to the rules governed by the DICOM Standard. The following section will roll-out the definition of this Private IOD. It can be communicated with Network Storage Service and Offline Media Storage Services.

The Siemens "Non-Image IOD" is identified by a private Non-Image Storage SOP Class UID of

„1.3.12.2.1107.5.9.1"

### A.1.1 Siemens Non-Image IOD – E-R Model

The E-R model in A.1.2 depicts those components of the DICOM Information Model which directly refer to the Siemens Non-Image IOD. The Frame of Reference IE, Overlay IE, Modality Lookup-Table IE, VOI Lookup-Table IE and Curve IE are not components of the Siemens Non-Image IOD.

### A.1.3 Siemens Non-Image IOD - Modules

### A.1.3.1 Siemens Non-Image Module

The table in this section contains private IOD Attributes that describe CSA Non-Images.

| Attribute Name | Tag | Owner | Type | Notes |
|---|---|---|---|---|
| Image Type | (0008,0008) | - | 3 | Image identification characteristics. |
| Acquisition Date | (0008,0022) | - | 3 | The date the acquisition of data that resulted in this data set started. |
| Acquisition Time | (0008,0032) | - | 3 | The time the acquisition of data that resulted in this data set started. |
| Conversion Type | (0008,0064) | - | 3 | Describes the kind of image conversion. Defined Terms: DV = Digitized Video, DI = Digital Interface, DF = Digitized Film, WSD = Workstation. |
| Referenced Image Sequence | (0008,1140) | - | 3 | A sequence which provides reference to a set of Image SOP Class/Instance identifying other images significantly related to this data set. Encoded as sequence of items: (0008,1150) and (0008,1155). |
| Derivation Description | (0008,2111) | - | 3 | A text description of how this data set was derived. |
| Source Image Sequence | (0008,2112) | - | 3 | A Sequence which identifies the set of Image SOP Class/Instance pairs of the Images which were used to derive this data set. Zero or more Items may be included in this Sequence. Encoded as sequence of items: (0008,1150) and (0008,1155). |
| Patient Position | (0018,5100) | - | 3 | Patient position descriptor relative to the equipment. |
| Acquisition Number | (0020,0012) | - | 3 | A number identifying the single continuous gathering of data over a period of time which resulted in this data set. |
| Image Number | (0020,0013) | - | 3 | A number that identifies this data set. |
| Frame of Reference UID | (0020,0052) | - | 3 | Uniquely identifies the frame of reference for a Series. |
| Image Comments | (0020,4000) | - | 3 | User-defined comments about the image. |
| Quality Control Image | (0028,0300) | - | 3 | Indicates whether or not this image |

| | | | | is a quality control or phantom image. If this Attribute is absent, then the image may or may not be a quality control or phantom image. Enumerated Values: YES, NO. |
|---|---|---|---|---|
| Burned in Annotation | (0028,0301) | - | 3 | Indicates whether or not image contains sufficient burned in annotation to identify the patient and date the image was acquired. If this Attribute is absent, then the image may or may not contain burned in annotation. Enumerated Values: YES, NO. |
| Lossy Image Compression | (0028,2110) | - | 3 | Specifies whether an Image has undergone lossy compression. Enumerated Values: 00 = Image has NOT been subjected to lossy compression, 01 = Image has been subjected to lossy compression. |
| Lossy Image Compression Ratio | (0028,2112) | - | 3 | Describes the approximate lossy compression ratio(s) that have been applied to this image. May be multi valued if successive lossy compression steps have been applied. |
| CSA Data Type | (0029,xx08) | SIEMENS CSA NON-IMAGE | 1 | CSA Data identification characteristics. Defined Terms: BSR REPORT = Study Report Data 3D EDITOR 3D FLY PATH = Fly Through Data 3D FLY VRT = Fly Through Data 3D FUSION MATRIX = Fusion Data RAW DATA NUM 4 = NUMARIS/ Raw Data RAW DATA SOM 5 = SOMARIS/ Raw Data RT3D CONFIG = InSpaceIS Data SPEC NUM 4 = NUMARIS/4 Spectroscopy |
| CSA Data Version | (0029,xx09) | SIEMENS CSA NON-IMAGE | 3 | Version of CSA Data Info (0029,xx10) format and CSA Non-Image Data (7FE1,xx10) format. |
| CSA Data Info | (0029,xx10) | SIEMENS CSA NON-IMAGE | 3 | Information to describe the CSA Data (7FE1,xx10). |
| CSA Data | (7FE1,xx10) | SIEMENS CSA NON-IMAGE | 2 | Binary data as byte stream. |

### A.2.1 Siemens Image Header Module

The table in this section contains private IOD Attributes that describe the CSA Image Header:

| Attribute Name | Tag | Owner | Type | Notes |
|---|---|---|---|---|
| CSA Image Header Type | (0029,xx08) | SIEMENS CSA HEADER | 1 | CSA Image Header identification characteristics.<br>Defined Terms:<br>NUM 4 = NUMARIS/4<br>SOM 5 = SOMARIS/5 |
| CSA Image Header Version | (0029,xx09) | SIEMENS CSA HEADER | 3 | Version of CSA Image Header Info (0029,xx10) format. |
| CSA Image Header Info | (0029,xx10) | SIEMENS CSA HEADER | 3 | Manufacturer model dependent information. |

*Table 70.     Siemens Image Header IOD Modules*

### A.2.2 Siemens Series Header Module

The table in this section contains private IOD Attributes that describe the CSA Series Header:

| Attribute Name | Tag | Owner | Type | Notes |
|---|---|---|---|---|
| CSA Series Header Type | (0029,xx18) | SIEMENS CSA HEADER | 1 | CSA Series Header identification characteristics.<br>Defined Terms:<br>NUM 4 = NUMARIS/4 |
| CSA Series Header Version | (0029,xx19) | SIEMENS CSA HEADER | 3 | Version of CSA Series Header Info (0029,xx20) format. |
| CSA Series Header Info | (0029,xx20) | SIEMENS CSA HEADER | 3 | Manufacturer model dependent information. |

### A.2.3 MEDCOM Header Module

The table in this section contains private IOD Attributes that describe MEDCOM Header:

| Attribute Name | Tag | Owner | Type | Notes |
|---|---|---|---|---|
| MedCom Header Type | (0029,xx08) | SIEMENS MEDCOM HEADER | 1C | MedCom Header identification characteristics.<br>Defined Terms:<br>MEDCOM 1<br>(Required if MedCom Header Info (0029,xx10) present.) |
| MedCom Header Version | (0029,xx09) | SIEMENS MEDCOM HEADER | 2C | Version of MedCom Header Info (0029,xx10) format.<br>(Required if MEDCOM Header Info (0029,xx10) present.) |
| MedCom Header Info | (0029,xx10) | SIEMENS MEDCOM HEADER | 3 | Manufacturer model dependent information.<br>The value of the attribute MedCom Header Info (0029,xx10) can be build up in each user defined format. |
| MedCom History Information | (0029,xx20) | SIEMENS MEDCOM HEADER | 3 | MedCom defined Patient Registration history information. See A.2.3.1. |
| PMTF Information 1 | (0029,xx31) | SIEMENS MEDCOM HEADER | 3 | Transformation Information |
| PMTF Information 2 | (0029,xx32) | SIEMENS MEDCOM HEADER | 3 | Transformation Information |
| PMTF Information 3 | (0029,xx33) | SIEMENS MEDCOM HEADER | 3 | Transformation Information |
| PMTF Information 4 | (0029,xx34) | SIEMENS MEDCOM HEADER | 3 | Transformation Information |
| PMTF Information 5 | (0029,xx35) | SIEMENS MEDCOM HEADER | 3 | Transformation Information |
| Application Header Sequence | (0029,xx40) | SIEMENS MEDCOM HEADER | 3 | Sequence of Application Header items. Zero or more items are possible. |

|---|---|---|---|---|
| >Application Header Type | (0029,xx41) | SIEMENS MEDCOM HEADER | 1C | Application Header identification characteristics.<br>Required, if Sequence is sent. |
| >Application Header ID | (0029,xx42) | SIEMENS MEDCOM HEADER | 3 | Identification of an application header |
| >Application Header Version | (0029,xx43) | SIEMENS MEDCOM HEADER | 3 | Version of CSA Series Header Info (0029,xx44) format. |
| >Application Header Info | (0029,xx44) | SIEMENS MEDCOM HEADER | 3 | Application dependent information. |
| Workflow Control Flags | (0029,xx50) | SIEMENS MEDCOM HEADER | 3 | Eight free definable flags. |
| Archive Management Flag Keep Online | (0029,xx51) | SIEMENS MEDCOM HEADER | 3 | Flag to control remote archive management system to keep the image always online (also when already archived).<br>Enumerated Values:<br> 00 = remote control not required<br> 01 = keep image online |
| Archive Management Flag Do Not Archive | (0029,xx52) | SIEMENS MEDCOM HEADER | 3 | Flag to control remote archive management system not to archive the related image.<br>Enumerated Values:<br> 00 = remote control not required<br> 01 = don't archive image |
| Image Location Status | (0029,xx53) | SIEMENS MEDCOM HEADER | 3 | Image location status to control retrieving.<br>Defined Terms:<br>ONLINE = retrieving has to be done as usual,<br>NEARLINE = move request to SCP and delay according to value of Estimated Retrieve Time (0029,xx54),<br>OFFLINE = invoking a retrieve operation initiates an operator request,<br>INVALID = invoking a retrieve operation would always result in an error. |
| Estimated Retrieve Time | (0029,xx54) | SIEMENS MEDCOM HEADER | 3 | Estimated retrieve time in seconds. A value less then zero (< 0) indicates location is OFFLINE or INVALID. |
| Data Size of Retrieved Images | (0029,xx55) | SIEMENS MEDCOM HEADER | 3 | Data size of images in MByte. |
| **Siemens Link Sequence** | **(0029,xx70)** | **SIEMENS MEDCOM HEADER** | **3** | **Sequence of link items. Each item identify the location of one missing tag. One or more items can be included in this sequence.** |
| **Referenced Tag** | **(0029,xx71)** | **SIEMENS MEDCOM HEADER** | **1** | **The referenced tag. The value of this tag is in the Child Data Object (CDO). Currently it is always Pixel Data (7FE0,0010).** |
| **Referenced Tag Type** | **(0029,xx72)** | **SIEMENS MEDCOM HEADER** | **1** | **The Value Representation (type) of the missing tag (e.g. OW). Enumerated values are all DICOM defined Value Representations.** |
| **Referenced Value Length** | **(0029,xx73)** | **SIEMENS MEDCOM HEADER** | **1** | **The length of the referenced tag value in bytes.** |
| **Referenced Object Device Type** | **(0029,xx74)** | **SIEMENS MEDCOM HEADER** | **1** | **The Device Type that stores the Child Data Object (CDO) with the referenced tag value. Currently it should be "SHMEM". In future, "SDM", "LOID" or "FILE" are also imaginable. Defined Terms are<br>SHMEM = Shared Memory<br>SDM = Series Data Management<br>LOID = Database<br>FILE** |
| **Referenced Object Device Location** | **(0029,xx75)** | **SIEMENS MEDCOM HEADER** | **2** | **The Location of the device that stores the Child Data Object (CDO) with the referenced tag value. For the "SHMEM" case, it is the shared** |

| | | | | memory directory. Can be empty, then the default directory will be taken. In future, for "SDM" this will be the SDM_ID, for FILE it will be the directory name and for "LOID" it will be the database name. |
| **Referenced Object ID** | **(0029,xx76)** | **SIEMENS MEDCOM HEADER** | **1** | The ID of the object that contains the Child Data Object (CDO) with the referenced tag value. In case of "SHMEM" it is the shared memory ID. In future, for "SDM" this will be a Sirius OID, for "FILE" the file name, for "DB" the LOID. |
| **Series Work Flow Status** | **(0029,xx60)** | **SIEMENS MEDCOM HEADER2** | **3** | syngo Patient Browser specific flags used for clinical work: • com = completed • rea = read • ver = verified |

*Table 72.    MEDCOM Header IOD Module*

### A.2.3.1    MEDCOM History Information

The value of the attribute MEDCOM History Information (0029,xx20) is defined in the following way:

| Part | Name | Type | Bytes | Notes |
|---|---|---|---|---|
| Header | Identifier | string | 32 | Always "CSA HISTORY" |
| | Version | string | 32 | e.g. "V1.10" |
| n Items | Class Name | string | 64 | |
| | Modification String | string | 1024 | |

*Table 73.    MEDCOM History Information*

### A.2.4    MEDCOM OOG Module

The table in this section contains private IOD Attributes that describe MEDCOM Object Oriented Graphics (OOG). This module is used whenever object graphics is drawn on the image and need to be stored as graphic object properties. Given the condition that the module contents was not removed by other modalities, the graphic objects remain re-animatable if such an image was transferred and is then retrieved back

| Attribute Name | Tag | Owner | Type | Notes |
|---|---|---|---|---|
| MedCom OOG Type | (0029,xx08) | SIEMENS MEDCOM OOG | 1 | MEDCOM Object Oriented Graphics (OOG) identification characteristics. Defined Terms: MEDCOM OOG 1 MEDCOM OOG 2 |
| MedCom OOG Version | (0029,xx09) | SIEMENS MEDCOM OOG | 3 | Version of MEDCOM OOG Info (0029,xx10) format. |
| MedCom OOG Info | (0029,xx10) | SIEMENS MEDCOM OOG | 3 | MEDCOM Object Oriented Graphics (OOG) data. |

*Table 74.    MEDCOM Object Oriented Graphics IOD Module*

The graphics objects are also fully drawn in the Image Overlay Plane for compatibility with other products, which do not support the MedCom OOG module. Any system not supporting the MedCom OOG module shall remove the OOG module and it's contents when modifying the image overlay plane content.

### A.2.5 *syngo* Report Data

The module contains private IOD Attributes that describe *syngo* reports. This module is used when *syngo* report data are added to DICOM SR and DICOM SC objects.

| Attribute Name | Tag | Owner | Type | Notes |
|---|---|---|---|---|
| *syngo* Report Type | (0029,xx08) | SIEMENS CSA REPORT | 1 | *syngo* report characteristics, e.g. report creating application. Defined Terms: CT_LUNGCARE MR_ARGUS This attribute value will be used to identify the corresponding application during generic extension dll management. A restricted character set is used: only A-Z and underscore are supported. |
| *syngo* Report Version | (0029,xx09) | SIEMENS CSA REPORT | 3 | Version of *syngo* Report Data (0029,xx10) format. |
| *syngo* Report Data | (0029,xx10) | SIEMENS CSA ENVELOPE | 3 | A representation of DICOM SR Attribute Content Sequence (0040,A730). This includes the document relationship and document content. This data will typically be represented using an XML encoding according to a Siemens private scheme. |
| *syngo* Report Presentation | (0029,xx11) | SIEMENS CSA ENVELOPE | 3 | A representation of the recommended presentation for the *syngo* Report Data (0029,xx10). This presentation will typically be encoded in XSLT. |
| SR Variant | (0029,xx15) | SIEMENS CSA REPORT | | DICOM SR variant. Enumerated Values: 0 =Basic Text SR (1.2.840.10008.5.1.4.1.1.88.11) 1 = Enhanced SR (1.2.840.10008.5.1.4.1.1.88.22) 2 = Comprehensive SR (1.2.840.10008.5.1.4.1.1.88.33) 3 =Mammography CAD SR (1.2.840.10008.5.1.4.1.1.88.50) 4 = Key Object Selection Document (1.2.840.10008.5.1.4.1.1.88.59) |
| SC SOP Instance UID | (0029,xx17) | SIEMENS CSA REPORT | 3 | DICOM SOP Instance UID of *syngo* based SC Image representing the *syngo* report object. This UID will be used to identify the Resulting SC object after SR to SC conversion. |

*Table 75.* syngo *Report Data Module*

### A.2.6 *syngo* Report Info

The module *syngo* Report Info contains all DICOM SR attributes exept the Contents Sequence 0040,A730). This module is only used during SR to SC conversion.

## A.4 Standard Extensions of all SOP Classes

The following tables list the data dictionary of all DICOM IOD attributes where the DICOM standard definitions are extended:

| Attribute Name | Tag | Private Creator | Type | Notes |
|---|---|---|---|---|
| Image Type | (0008,0008) | - | 1 | see A.4.1<br>additional Defined Terms:<br><br>Defined Terms for value 3:<br>OTHER<br><br>Defined Terms for value 4:<br>CSA 3D EDITOR<br>CSA 3D FLY PATH<br>CSA 3D FLY VRT<br>CSA 3D FUSION<br>CSA AVERAGE<br>CSA BLACK IMAGE<br>CSA RESAMPLED<br>CSA MIP<br>CSA MPR<br>CSA MPR CURVED<br>CSA MPR THICK<br>CSA SSD<br>CSA SUBTRACT<br>CT_SOM4 *<br>ECAT ACF<br>ECAT NORMAL<br>ECAT 3D SINO<br>ECAT 3D SINO FLT<br>SHS *<br>CSA DRR<br>OCS_SAVEASREF |

*Table 77.     Standard Extensions of all SOP Classes*

All SOP classes may contain additional type 3 attributes which DICOM standard defines in a different DICOM IOD or DICOM SOP class (attributes from Normalized SOP classes).

This is the case for example for

- Rescale Slope (0028,1053)

- Rescale Intercept (0028,1052)

which are also used in the MR IOD.

### A.4.1 Image Type

The Image Type (0008,0008) attribute identifies important image identification characteristics. These characteristics are:

1. Pixel Data Characteristics:

- is the image an ORIGINAL Image; an image whose pixel values are based on original or source data, or

- is the image a DERIVED Image; an image whose pixel values have been derived in some manner from the pixel value of one or more other images.

2. Patient Examination Characteristics:

- is the image a PRIMARY Image; an image created as a direct result of the Patient examination, or

- is the image a SECONDARY Image; an image created after the initial Patient examination.

3. Modality Specific Characteristics (SOP Specific Characteristics).

4. Implementation specific identifiers; other implementation specific identifiers shall be documented in an implementation's conformance claim.

The Image Type attribute is multi-valued and shall be provided in the following manner:

- Value 1 shall identify the Pixel Data Characteristics; Enumerated Values for the Pixel Data Characteristics are:

  ● ORIGINAL = identifies an Original Image

  ● DERIVED = identifies a Derived Image

- Value 2 shall identify the Patient Examination Characteristics; Enumerated Values for the Patient Examination Characteristics are:

  ● PRIMARY = identifies a Primary Image

  ● SECONDARY = identifies a Secondary Image

- Value 3 shall identify any Image IOD specific specialization, the following terms are defined in addition to the DICOM standard definitions:

  ● OTHER = is also used for converted non-Axial and non-Localizer CT images

  ● MPR = for 3D MPR images

  ● PROJECTION IMAGE = for 3D MIP and SSD images

  ● DRR = Digitally reconstructed Radiograph

  ● PORTAL = Radiation Therapy Portal Image

  ● SIMULATED = Image from a Radiation Therapy Plan Simulator

- Value 4 which are implementation specific, the following terms are defined in addition to the DICOM standard definitions:

original *syngo* generated data set types:

       CSA 3D EDITOR = object created by 3D Editor
       CSA 3D FLY PATH = object created by Fly Through Path
       CSA 3D FLY VRT = object created by Fly Through Volume Rendering Technique
       CSA 3D FUSION = object created by Fusion
       CSA AVERAGE = image was created by Average
       CSA BLACK IMAGE = SC Image with black pixels, only graphics information is of interest
       CSA RESAMPLED = derived image created by zooming or panning original image
       CSA REPORT = *syngo* reporting (documentation of diagnosis)
       CSA RESULT = *syngo* reporting (postprocessing results)
       CSA MIP = image created by Maximum Intensity Projection
       CSA MIP THIN = image created by Maximum Intensity Projection
       CSA MPR = image created by Multi Planar Reconstruction
       CSA MPR CURVED = image created by Multi Planar Reconstruction

CSA MPR THICK = image created by Multi Planar Reconstruction
CSA MPR THIN = image created by Multi Planar Reconstruction
CSA SSD = SC Image as Shaded Surface Display
CSA SUBTRACT = image was created by Subtraction
ECAT ACF = CTI PET Attenuation Correction
ECAT NORMAL = CTI PET Normalization
ECAT 3D SINO = CTI PET 3D Sinogram Short
ECAT 3D SINO FLT = CTI PET 3D Sinogram Float
CSA DRR = Digitally reconstructed Radiograph
OCS_SAVEASREF = Reference Image for Patient Positioning

### A.4.2     Patient Position

The Patient Position attribute (0018,5100) defines the patient position relative to the equipment.

The Defined Terms for this value were extended for the MAGNETOM OPEN product. Here the patient is not positioned Head First/Feet First when facing the front of the imaging equipment but Head Left or Feet Left.

The new va\lues are:

- HLS (Head left - Supine)
- HLP (Head left - Prone)
- FLS (Feet left - Supine)
- FLP (Feet left - Prone)
- HLDL (Head left - Decubitus left)
- HLDR (Head left - Decubitus right)
- FLDL (Feet left - Decubitus left)
- FLDR (Feet left - Decubitus right)

### A.5      OCS SOP UIDs

All UID's for OCS products will be generated following the following template:

1.3.12.2.1107.5.<GG>.<product>.<serial_no><variable part of UID>

The GG number of OCS is 7.

The products are defined as follows:

- 1 = Reserved
- 2 = BeamView

- 3 = Oncologist Workspace

- 4 = Physics Workspace

- 5 = KonRad Planning System

- 6 = Cosmic MLC control software

- 7 = Therapist Workspace (starting with V1.0.500 and higher) or PRIMEVIEW 3i

- 8 = Dosimetrist Workspace (starting with V2.2)

## A.6      SC Standard Extended SOP Class

The COHERENCE Dosimetrist Workstation will create functional images from special applications. Those will be encoded as SC Standard extended SOP Class. Please see the following table for complete overview of supplied Type 1/2/3 Standard and Private attributes:

## A.7        RT IOD Specific Implementation Details – COHERENCE Dosimetrist

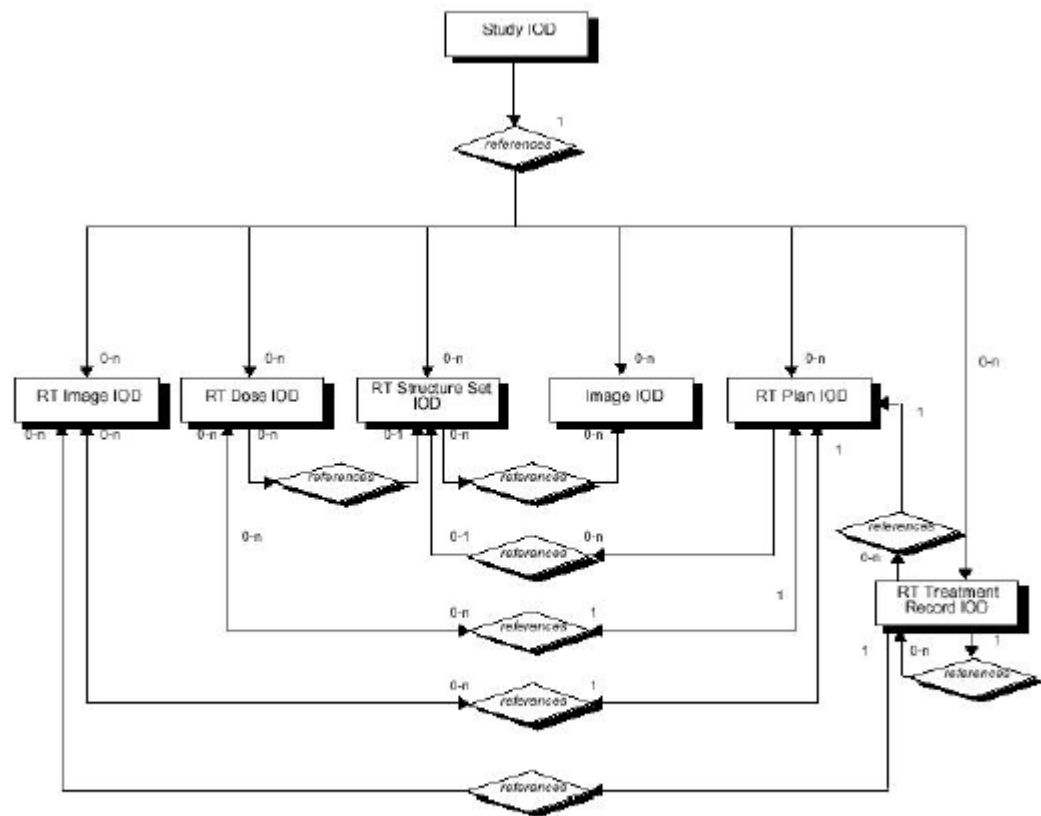

**DICOM INFORMATION MODEL - RADIO THERAPY**

*Figure 11.    DICOM RT ER Model*

**COHERENCE Dosimetrist - VSim**

The COHERENCE Dosimetrist Workstation RT IOD specific implementation details are provided with respect to its role as service class user (SCU) as well as service class provider (SCP) in the notes.

The COHERENCE Dosimetrist Workstation as service class provider (SCP) makes a copy of all non siemens RT objects identified by General Equipment Module Manufacturer Name (0008,0070) set other than "Siemens Oncology Care Solutions" and Manufacturer's Model Name (0008,1090) set other than "COHERENCE Dosimetrist Workspace". During import of non siemens RT objects in the case that the provided value of an attribute is other than that expected by COHERENCE Dosimetrist Workstation; the attribute is corrected in copied RT object as in the notes below. The original RT objects are kept intact.

| Attribute Name | Tag | Notes |
|---|---|---|
| > ROI Number | (3006,0022) | Integer number assigned during creation of ROI. Used to uniquely identify the corresponding ROI Contour and RT ROI Observations modules under a structure set. COHERENCE Dosimetrist ensures uniqueness of this attribute while creating ROIs. Dataset must have in case of siemens and non siemens RT objects. |
| > Referenced Frame of Reference UID | (3006,0024) | Frame of Reference UID of the CT series used for which ROI is defined. Dataset must have in case of siemens and non siemens RT objects. |

*Table 85.     RT Structure Set Module - Dosimetrist / VSim*

### A.7.1.7     ROI Contour Module - Dosimetrist / VSim

| Attribute Name | Tag | Comments |
|---|---|---|
| ROI Contour Sequence | (3006,0039) | COHERENCE Dosimetrist creates/requires at least one ROI Contour module to be present in a Structure Set. |
| > Referenced ROI Number | (3006,0084) | An integer used to uniquely identify the ROI and its associated modules within a Structure Set. Dataset must have in case of siemens and non siemens RT objects. |
| > ROI Display Color | (3006,002A) | COHERENCE Dosimetrist expects/fills 3 integer values in the range 0-255. These values are interpreted as RGB components of display color. Sets default color to red if not provided. |
| > Contour Sequence | (3006,0040) | COHERENCE Dosimetrist stores the contour information in this attribute. For structures there can be zero or more contour sequences. For Reference Point, only one contour sequence is stored. |
| >> Contour Number | (3006,0048) | COHERENCE Dosimetrist stores a unique number within Contour Sequence (3006,0040).. |
| >> Attached Contours | (3006,0049) | Not Set. |
| >> Contour Image Sequence | (3006,0016) | COHERENCE Dosimetrist passes this sequence for every contour sequence. Note: This is passed only for structures and not for reference points. Dataset must have in case of siemens and non siemens RT objects. |
| >>> Referenced SOP Class UID | (0008,1150) | CT Image SOP Class UID as defined in DICOM. Dataset must have in case of siemens and non siemens RT objects. |
| >>> Referenced SOP Instance UID | (0008,1155) | SOP Instance UID of the CT image on which the contour is drawn. Dataset must have in case of siemens and non siemens RT objects. |
| >>> Referenced Frame Number | (0008,1160) | COHERENCE Dosimetrist stores the default frame number of CT Image i.e., 0. CT images are not single frame images. Removed from copied structure set in case of non siemens RT objects. |
| >> Contour Geometric Type | (3006,0042) | COHERENCE Dosimetrist stores the geometry of contour. For Reference Points, the value is "POINT". For Structures or ROIs the value is always "CLOSED_PLANAR". COHERENCE Dosimetrist always creates closed planar contours. Dataset must have in case of siemens and non siemens RT objects. |
| >> Contour Slab Thickness | (3006,0044) | Not Set. |
| >> Contour Offset Vector | (3006,0045) | Not Set. |
| >> Number of Contour Points | (3006,0046) | COHERENCE Dosimetrist stores the number of contour points in the contour. Dataset must have in case of siemens and non siemens RT objects. Note: For Reference Point it is always 1. |

| Attribute Name | Tag | Comments |
|---|---|---|
| >> Contour Data | (3006,0050) | COHERENCE Dosimetrist stores the contour data as sequence of triplets.(X, Y & Z coordinates of each point). Dataset must have in case of siemens and non siemens RT objects. |

*Table 86.      RT Contour Module - Dosimetrist / VSim*

### A.7.1.8      RT ROI Observations Module - Dosimetrist / VSim

| Attribute Name | Tag | Comments |
|---|---|---|
| RT ROI Observations Sequence | (3006,0080) | COHERENCE Dosimetrist stores observation related to ROI / Reference Point. Dataset must have in case of siemens and non siemens RT objects. |
| > Observation Number | (3006,0082) | Unique integer identifying the Observation within the Observation Sequence.  COHERENCE Dosimetrist sets it equal to the Reference ROI Number (3006,0084) because, as of the current version, only one Observation is supported per ROI. |
| > Referenced ROI Number | (3006,0084) | An integer used to uniquely identify the ROI and its associated modules within a Structure Set. Dataset must have in case of siemens and non siemens RT objects. |
| > ROI Observation Label | (3006,0085) | COHERENCE Dosimetrist stores the name of the ROI/Reference Point (truncated to 16 characters) as set in the ROI Name(3006,0026) attribute of Structure Set ROI Sequence under RT Structure Set. |
| > ROI Observation Description | (3006,0088) | Not Set. |
| > RT Related ROI Sequence | (3006,0030) | Not Set. |
| >> Referenced ROI Number | (3006,0084) | Not Set. |

| > RT ROI Identification Code Sequence | (3006,0086) | Not Set. |
| > Related RT ROI Observations Sequence | (3006,00A0) | Not Set. |
| >> Observation Number | (3006,0082) | Not Set. |
| > RT ROI Interpreted Type | (3006,00A4) | COHERENCE Dosimetrist stores the information about the type of ROI / Reference Point. COHERENCE Dosimetrist sets/interprets the following terms as: EXTERNAL, PTV, CTV, GTV, TREATED_VOLUME, IRRAD_VOLUME, BOLUS, AVOIDANCE, ORGAN, REGISTRATION, CONTRAST_AGENT, CAVITY, BRACHY_CHANNEL, BRACHY_ACCESSORY, BRACHY_SRC_APP, BRACHY_CHNL_SHLD – All these are structures. MARKER – Marked Reference Point ISOCENTER – Reference Point In case of non siemens RT objects if not provided is set to ORGAN if Contour Geometric Type (3006,0042) is CLOSED_PLANER and set to ISOCENTER if its POINT in copied structure set. |
| > ROI Interpreter | (3006,00A6) | Not Set. |
| > Material ID | (300A,00E1) | Not Set. |
| > ROI Physical Properties Sequence | (3006,00B0) | COHERENCE Dosimetrist stores the physical property associated of the ROI. Only one value for this SQ is supported if and only if the physical property is other then "CT." The value is always electron density relative to water. Also for Reference Points, this attribute is not set and should not be interpreted as default CT. |
| >> ROI Physical Property | (3006,00B2) | COHERENCE Dosimetrist always stores the ROI Physical Property Value (3006, 00B4) as electron density relative to water. Hence this attribute will always have the value "REL_ELEC_DENSITY" |

| | | |
|---|---|---|
| >> ROI Physical Property Value | (3006,00B4) | A number set by the user as the physical property of the ROI. The following values should be interpreted as given below:<br>1 – Water<br>0.19 – Air.<br>Note: The attribute value has to be interpreted as electron density relative to water. |

| Attribute Name | Tag | Comment |
|---|---|---|
| Patient Setup Sequence | (300A,0180) | COHERENCE Dosimetrist stores the patient setup information for the following kinds of beams in the RT General Plan:<br>Relative beams (includes SSD based relative beams) and absolute SSD based beams.<br>If this module is present it is ignored (deleted) and recreated as per Vsim specification for non-siemens RT objects. |
| > Patient Setup Number | (300A,0182) | COHERENCE Dosimetrist stores a number that is unique within a plan. Beams under the plan refer to this number for patient setup information (referenced Isocenter and table position information). |
| > Patient Position | (0018,5100) | COHERENCE Dosimetrist stores the patient position information as set in the CT series used to create the structure set. |
| > Patient Additional Position | (300A, 0184) | Not Set. Since Patient Position (0018, 5100) is set, COHERENCE Dosimetrist does not set this attribute. |

| > Setup Technique | (300A,01B0) | COHERENCE Dosimetrist sets this attribute only in case of SSD based beams. In such cases the value set will be "FIXED_SSD" |
| > Setup Technique Description | (300A,01B2) | Not Set. |
| > Setup Device Sequence | (300A,01B4) | COHERENCE Dosimetrist uses this attribute to store the patient alignment information.This SQ attribute is filled if and only if the patient setup module under the plan is referenced by one or more Relative (or Relative-SSD) beams under the plan. COHERENCE Dosimetrist optimizes on the number of patient setup modules referenced by beams under a plan by keeping only one patient setup module for beams based on the same reference point and table position. |
| >> Setup Device Type | (300A,01B6) | COHERENCE Dosimetrist stores setup device for the patient alignment as "LASER_POINTER" |
| >> Setup Device Label | (300A,01B8) | Not Set. |

### A.7.1.11     RT Beam Module - Dosimetrist / VSim

| Attribute Name | Tag | Comments |
|---|---|---|
| Beam Sequence | (300A,00B0) | COHERENCE Dosimetrist does not support plans without beams. Atleast one Beam module will exist under a plan. |
| > Beam Number | (300A,00C0) | COHERENCE Dosimetrist stores the beam number in this attribute. The beam number may be entered  by the user or generated by the software. COHERENCE Dosimetrist generates only positive numbers in the range 1- $2^{31}$ -1 as beam numbers. In case of non siemens RT objects beam number is generated if not provided. |
| > Beam Name | (300A,00C2) | COHERENCE Dosimetrist stores the beam number as it appears in (300A, 00C0). In case of non siemens RT objects Beam Name is taken from Beam Name (300A,00C2) and set in Beam Description (300A,00C3) in the copied RT plan. Unique beam name is generated by setting Beam Number (300A,00C0) if Beam Name is not provided. |
| > Beam Description | (300A,00C3) | COHERENCE Dosimetrist uses this attribute to store the beam name. In case of non siemens RT objects name of beam is put in Beam Description. |
| > Beam Type | (300A,00C4) | COHERENCE Dosimetrist sets this values as "STATIC". Currently COHERENCE Dosimetrist creates/ supports STATIC beams only. In case of non siemens RT objects if beam type is "DYNAMIC" It is converted to "STATIC" only control points with index 0 and 1 are kept rest are removed. |
| > Radiation Type | (300A,00C6) | COHERENCE Dosimetrist creates/supports only "ELECTRON" and "PHOTON" beams as configured on the site. |
| > Treatment Machine Name | (300A,00B2) | COHERENCE Dosimetrist stores the name of the machine selected by the user to create the beam. Dataset must have in case of siemens and non siemens RT objects, if a machine with same name is not configured, the plan is rejected. |
| > Manufacturer | (0008,0070) | COHERENCE Dosimetrist stores the machine manufacturer's name in this attribute. The machine/equipment name used for beam delivery is read from configuration. This information is set at the time of configuring the machine. In case of non siemens RT objects set same as COHERENCE Dosimetrist. |
| > Institution Name | (0008,0080) | COHERENCE Dosimetrist stores the name of the Institution where the machine/equipment is located. This information is read from configuration set at the time of configuring the machine. In case of non siemens RT objects set same as COHERENCE Dosimetrist. |

| Attribute Name | Tag | Comments |

| > Primary Dosimeter Unit | (300A, 00B3) | Not Set. |
| > Referenced Tolerance Number | (300C, 00A0) | Not Set. |
| > Source - Axis Distance | (300A,00B4) | COHERENCE Dosimetrist stores the Source to Axis Distance of the machine. This information is read from configuration set at the time of configuring the machine. In case of non siemens RT objects set to configured value in case of mismatch in the copied RT plan. |
| > Beam Limiting Device Sequence | (300A,00B6) | COHERENCE Dosimetrist uses this attribute to store the beam limiting device information. Information is read from configuration set at the time of configuring a machine. The number of SQs in this attribute depends on the number of BLDs in the machine. For each BLD a SQ exists under a beam. Required in case of siemens and non siemens RT objects. If extra sequence are present not supported by configured machine they are removed from the copied RT plan. |
| >> RT Beam Limiting Device Type | (300A,00B8) | COHERENCE Dosimetrist uses this attribute to store the beam limiting device type. It can be one of: ASYMX ASYMY MLCX MLCY Required to be one of mentioned above in case of siemens and non siemens RT objects. |
| >> Source to Beam Limiting Device Distance | (300A,00BA) | COHERENCE Dosimetrist uses this attribute to store the source to beam limiting device distance. In case not provided set same as read from site configuration. |
| >> Number of Leaf/Jaw Pairs | (300A,00BC) | COHERENCE Dosimetrist stores the number of BLD pairs information for a beam limiting device in this attribute. This is always read from site configuration. Required in case of siemens and non siemens RT objects and must match with the configured machine. |
| >> Leaf Position Boundaries | (300A,00BE) | COHERENCE Dosimetrist uses this attribute to store the leaf position boundaries ONLY. This information is stored only for MLC type beam limiting devices. In case not provided set same as read from site configuration. |
| > Referenced Patient Setup Number | (300C,006A) | COHERENCE Dosimetrist uses this attribute to store the patient setup number corresponding to the patient setup module containing the patient alignment information for the Relative beams and all SSD based beams. In case of non siemens RT objects set to created/recreated patient setup number. |
| > Referenced Reference Image Sequence | (300C,0042) | Sequence of referenced RT images used for validation of current beam. |
| >> Referenced SOP Class UID | (0008,1150) | RT image SOP Class UID as per DICOM. |
| >> Referenced SOP Instance UID | (0008,1155) | SOP instance UID of referenced RT image for beam. |

| | | |
| > Number of Boli | (300A,00ED) | COHERENCE Dosimetrist stores always 0 as value. |
| > Referenced Bolus Sequence | (300C, 00B0) | Not Set. Since Number of Boli (300A, 00ED) is set to 0, this SQ is not set. |
| >> Referenced ROI Number | (3006, 0084) | Not Set. |
| > Number of Blocks | (300A, 00F0) | COHERENCE Dosimetrist stores the number of blocks/ports for the current beam. This information is only for HPD machines (machines with only jaws as beam limiting device). For all other machines (machines with beam limitng device as MLC, or both MLC and jaws) value stored is 0 as they do not support blocks. |
| > Total Block Tray Factor | (300A, 00F2) | Not Set. |

| Attribute Name | Tag | Comments |
|---|---|---|
| > Block Sequence | (300A, 00F4) | COHERENCE Dosimetrist stores the block data for HPD machines having one or more number of blocks. For MLC machines this SQ attribute is not set. COHERENCE Dosimetrist expects the Block type (300A, 00F8) to be same for all blocks under the sequence. |
| >> Block Tray ID | (300A ,00F5) | Not Set. |
| >>Source to Block Tray Distance | (300A, 00F6) | COHERENCE Dosimetrist stores the source to block tray distance in this attribute. This information is read from configuration set at the time of configuring a machine. |
| >> Block Type | (300A, 00F8) | COHERENCE Dosimetrist stores the following values: SHIELDING  - for blocks APERTURE -  for ports |
| >> Block Divergence | (300A, 00FA) | COHERENCE Dosimetrist always sets the value "ABSENT » |
| >> Block Number | (300A, 00FC) | COHERENCE Dosimetrist generates a unique number under the beam for this attribute. |
| >> Block Name | (300A, 00FE) | Not Set. |
| >> Material ID | (300A, 00E1) | Not Set. |
| >> Block Thickness | (300A, 0100) | COHERENCE Dosimetrist always sets the value 0 |
| >> Block Transmission | (300A, 0102) | COHERENCE Dosimetrist always sets the value 0 |
| >> Block Number of Points | (300A, 0104) | Number of points present in the contour drawn for block/port |
| >> Block Data | (300A, 0106) | Actual contour data drawn by user. |
| > Applicator Sequence | (300A, 0107) | Not Set. |

| >> Applicator Type | (300A, 0109) | Not Set. |
| >> Applicator Description | (300A, 010A) | Not Set. |
| > Final Cumulative Meterset Weight | (300A,010E) | COHERENCE Dosimetrist always stores 1, so that the cumulative meterset weight is equal to the fraction of the beam meterset delivered at each control point. |
| > Number of Control Points | (300A,0110) | Since COHERENCE Dosimetrist creates only STATIC beams, the value is set to 2. In case of non siemens RT objects only first two control points will be read. |
| > Control Point Sequence | (300A,0111) | Contains exactly 2 control points. All Control Point parameters are set for 1st control point. 2nd control point contains, only, Control Point index and Cumulative meterset weight. Dataset must have in case of siemens and non siemens RT objects. |
| >> Control Point Index | (300A,0112) | 0 for 1st control point and 1 for 2nd control point. Dataset must have in case of siemens and non siemens RT objects. |
| >> Cumulative Meterset Weight | (300A,0134) | The first control point always has a cumulative meterset weight set to zero (0). Because COHERENCE Dosimetrist creates only STATIC beams, the second control point always has a cumulative meterset weight equal to the final cumulative meterset weight (300A,010E). |
| >> Referenced Dose Reference Sequence | (300C, 0050) | Not Set. |

Information is read from configuration set at the time of configuring a machine. The number of SQs in this attribute depends on the number of BLDs in the machine. For each BLD a SQ exists under a beam. This information is copied from the corresponding beam.. |
| >> RT Beam Limiting Device Type | (300A,00B8) | COHERENCE Dosimetrist uses this attribute to store the beam limiting device type. It can be one of: ASYMX ASYMY MLCX MLCY This information is copied from the corresponding beam.. |
| >> Source to Beam Limiting Device Distance | (300A,00BA) | COHERENCE Dosimetrist uses this attribute to store the source to beam limiting device distance. |
| >> Number of Leaf/Jaw Pairs | (300A,00BC) | COHERENCE Dosimetrist stores the number of BLD pairs information for a beam limiting device in this attribute. This information is copied from the corresponding beam.. |
| >> Leaf Position Boundaries | (300A,00BE) | COHERENCE Dosimetrist uses this attribute to store the leaf position boundaries ONLY. This information is stored only for MLC type beam limiting devices. This information is copied from the corresponding beam.. |
| > Beam Limiting Device Sequence | (300A,00B6) | COHERENCE Dosimetrist uses this attribute to store the beam limiting device information. Information is read from configuration set at the time of configuring a machine. The number of SQs in this attribute depends on the number of BLDs in the machine. For each BLD a SQ exists under a beam. This information is copied from the corresponding beam.. |

*Table 135.    RT image from Portal Image Acquisition – Beam Limiting Device 2*

### A.8.2.1    Operators Name

The Operators Name will contain the username of the user that was logged in and acquired the last image in the series. This Username is maintained by LANTIS in the Staff list. The treatment Delivery application uses it to regulate access to treatment.

### A.8.2.2    X-Ray Image Receptor Translation

The X-Ray Image Receptor Translation is determined as follows:

$$\begin{pmatrix} x \\ y \\ z \end{pmatrix} = \begin{pmatrix} epidX + offset\_lateral \\ epidY + offset\_longitudinal \\ SAD - SID \end{pmatrix}.$$

Where:

- epidX is the x coordinate of the Flat Panel in IEC X-Ray Image Receptor coordinate system.
- epidY is the y coordinate of the Flat Panel in IEC X-Ray Image Receptor coordinate system.
- SID is the Distance from the source at which Portal Imaging is to acquire an image
- offset_lateral is the lateral flat panel alignment offset.
- offset_longitudinal is the longitudinal flat panel alignment offset

It is stored as 3 floating point values of the format "x\y\z"

**Note**:     For acquired images, the the epidX and epidY values will initially always be 0.0. However if an image center correction is applied to the images, the correction will be stored in the Image Receptor Translation values.

### A.8.2.3      Image Plane Pixel Spacing

The Image Plane Pixel Spacing x and y values are retrieved from the Hardware of the Imaging device.  For an image size of 1024x1024 the values are used directly. For and image size of 512x512 the values are doubled.

### A.8.2.4      Image width and height

The Image width and height are determined form the imaging hardware resolution.

### A.8.2.5      RT Image Position

The RT Image Position indicates the location of the center of the first (upper left) pixel in the IEC Image Receptor coordinate system and is determined as follows:

$$\begin{pmatrix} x \\ y \end{pmatrix} = \begin{pmatrix} -\dfrac{(width-1)*pixelSizeXMM}{2} \\ \dfrac{(height-1)*pixelSizeYMM}{2} \end{pmatrix}$$

Where:

- For width and height please refer to A.8.2.4
- For PixelSizeXMM and PixelSizeYMM please refer to A.8.2.3.

It is stored as 2 floating point values of the format "x\y"

### A.8.2.6 Leaf Position Boundaries and Leaf Jaw Positions

The leaf position boundaries and he leaf jaw positions are defined as follows:

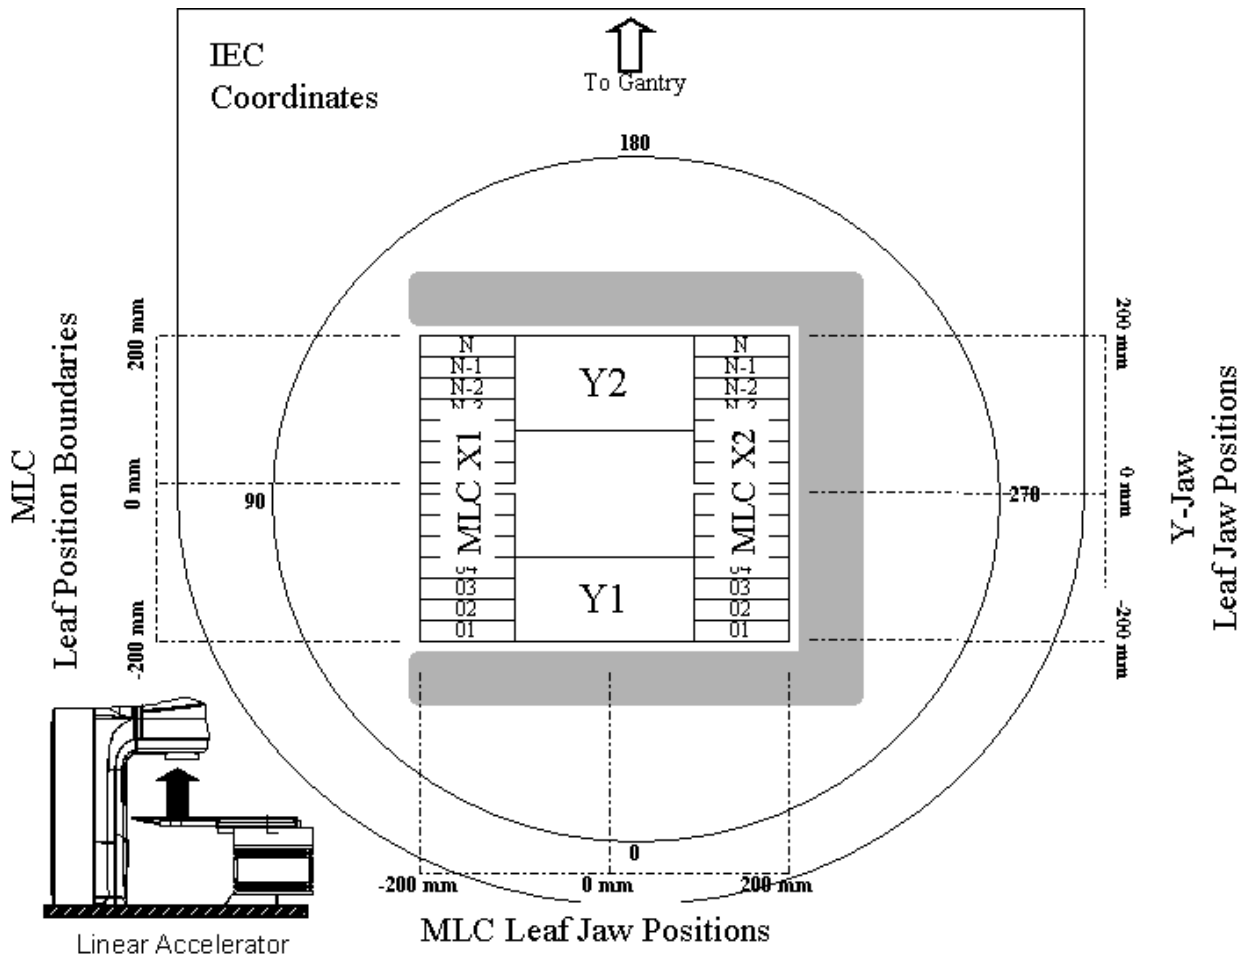

*Figure 12.    Leaf Position Boundaries and Leaf Jaw Positions*

The values for the Leaf Jaw Positions for the MLC are stored in the following sequence:

X1.01/X1.02/X1.03/… …/X1.N-1/X1.N/X2.01/X2.02/X2.03/… …/X2.N-1/X2.N

The values for the Leaf Jaw Positions for the Y-Jaws are stored in the following sequence:

Y1/Y2

The values for the Leaf Position Boundaries for the MLC are stored in the following sequence:

X1.01/X1.02/X1.03/… …/X1.N-1/X1.N/X1.final edge

If the MLC has 58 leaves then N=29, if the MLC has 82 leaves then N=41. For Jaws N=1.

### A.8.2.7 Private Attributes and their interpretation

The following specific private attributes are added to the header of the acquired portal image.

| Attribute Name | Tag | Owner | VR | VM | Notes |
|---|---|---|---|---|---|
| Number of Sub-Frames | (0039,xx77) | SIEMENS MED OCS NUMBER OF SUB FRAMES | IS | 1 | Used to store the number of sub-frames of each frame |

**Note:**    Besides RT Image, the Oncologist Workspace also supports the "SC", "CR", and "DX" modalities as reference images.
The Oncologist Workspace is used to evaluate RT Images as provided by the Portal Imaging Application.

**Note:**    In the following only the modified or new attributes will be mentioned. The other attributes are copied from the source image.

**A.9.2        Required Attributes for Patient Positioning**

The following subset of DICOM attributes are required for image positioning:

| Attribute Name | Tag | Value | |
|---|---|---|---|
| **Patient** | | | |
| Patient´s Name | (0010,0010) | Basic Patient Information (mandatory) | |

### A.9.3        Attributes set during positioning

The Oncologist workspace makes a copy of the selected reference image header and adds or modifies the following items:

**A.9.3.1    Standard Items**

| Attribute Name | Tag | Value |
|---|---|---|
| General Image | | |
| Image Type | (0008,0008) | "ORIGINAL\SECONDARY\PORTAL\OCS_SAVEASREF" |
| Referenced Image Sequence | (0008,1140) | If a 3D Offset calculation has been done with 3 orthogonal reference images, each of the orthogonal images stores the UID of the other so both can be loaded automatically. |
| RT Image Approval Modul | | |
| Approval Status / RT Study Status | (300E,0002) | See A.9.3.2 |
| Review Date / Referral Date | (300E,0004) | "yyyymmdd" |
| Review Time | (300E,0005) | "hhmmss.ffffff" |
| Reviewer Name | (300E,0008) | The username on the Oncologist Workstation. R1: "meduser" |

*Table 149.    Attributes set during positioning - Standard Items*

**A.9.3.2    Approval Status**

The Approval Status can contain the following items:

"UNAPPROVED" or missing    to indicate that evaluation of the image is still outstanding

"APPROVED"    the image has been reviewed and optionally a table location correction offset has been added.

"REJECTED"    The image is inadequate to perform an evaluation or provide a correction offset.

**A.9.3.3    Private Attributes and their interpretation**

The Oncologist Workspace adds its specific private attributes the header of the portal image.

| Attribute Name | Tag | Owner | VR | VM | Notes |
|---|---|---|---|---|---|
| Reference Image | (0039,xx76) | SIEMENS MED OCS REFERENCE IMAGE | UI | 1 | Contains the UID of the Reference Image |
| Offset | (0039,xx78) | SIEMENS MED OCS TABLE OFFSET | DS | 3 | Invalid for R1<br>To contain the table delta in IEC coordinates in the format:<br>"table longitudinal delta/<br> table lateral delta/<br> table vertical delta" |
| AE Title | (0039,xx79) | SIEMENS MED OCS AE TITLE | CS | 1 | If the Workstation is not an Oncologist Workstation the actual AE Title of the Workstation is remembered. |
| Transformation Matrix | (0039,xx80) | SIEMENS MED OCS TRANS MATRIX | DS | 5 | See A.9.3.4 |
| Acknowledge Flag | (0039,xx81) | SIEMENS MED OCS ACKNOWLEDGE FLAG | IS | 1 | 0 = false<br>1 = true |
| Image Center in Image Coordinates | (0039,xx82) | SIEMENS MED OCS ICC MATRIX | DS | 2 | X/Y, i.E.<br>for $1K^2$ image: 512/512<br>for $512^2$ image: 256/256<br>Not used for RT Images. For RT Images, Image Center is described in the X-Ray Image Receptor Translation Attribute. |
| Common Edge | (0039,xx83) | SIEMENS MED OCS COMMON EDGE | IS | 1 | 1 = common edge<br>missing = no common edge<br>This flag indicates if the user has selected this image to determine the longitudinal axis |
| Non-RT Image SID | (0039,xx85) | SIEMENS MED OCS SC IMG SID | DS | 1 | Used to store the manually entered SID for images which do not have the modality RTIMAGE |
| Non-RT Image SAD | (0039,xx86) | SIEMENS MED OCS SC IMG SAD | DS | 1 | Used to store the manually entered SAD for images which do not have the modality RTIMAGE |

| | | | | | |
|---|---|---|---|---|---|
| Non-RT Image Pixel Spacing | (0039,xx87) | SIEMENS MED OCS SC IMG PIX SPC | DS | 2 | Used to store the manually entered Pixel Spacing for images which do not have the modality RTIMAGE |
| Scaled Image Pixel Spacing | (0039,xx84) | SIEMENS MED OCS SCALED IMG PIX SPC | DS | 2 | X/Y, see also A.9.3.4 |
| Locked Flag | (0039,xx88) | SIEMENS MED OCS REFERENCE LOCKED | IS | 1 | Used for putting the Locked property in the Reference image when it is associated for the first time with a Tx image. |
| Applied Filters | (0039,xx98) | SIEMENS MED OCS APPLIED FILTER NAMES | IS | 1 | Used to store the history of filters that the user has applied while modifying the image. The Filter name along with the filter parameter are stored in this attribute. |

*Table 150.    Private Attributes for Patient Positioning*

### A.9.3.4        Transformation Matrix

The Transformation Matrix contains the following values:

| Name | Index | Value | Notes |
|---|---|---|---|
| Zoom x/y | 0 | 1.0 | For future use |
| X-pan | 1 | n.n | Applied to lateral when gantry angle @ 0o or 180o<br>Applied to vertical when gantry angle @ 90o or 270o |
| Y-pan | 2 | n.n | Applied to longitudinal @ all gantry angles |
| Image Rotation angle | 3 | 0.0 | For future use |
| Flip Flag | 4 | 0.0 | For future use |

*Table 151.    Private Attributes for Patient Positioning – Transformation Matrix*

For a gantry position of 0° the final table position for treatment would be calculated as follows:

$$\begin{pmatrix} Final\ Longitudinal\ Position \\ Final\ Lateral\ Position \\ Final\ Vertical\ Position \end{pmatrix} = \begin{pmatrix} Longitudinal\ Position + (-Y\_pan * Scaled\ Pixel\ Spacing\ Y) \\ Lateral\ Position + (X\_pan * Scaled\ Pixel\ Spacing\ X) \\ Vertical\ Position \end{pmatrix}$$

For a gantry position of 90° the final table position for treatment would be calculated as follows:

$$\begin{pmatrix} Final\ Longitudinal\ Position \\ Final\ Lateral\ Position \\ Final\ Vertical\ Position \end{pmatrix} = \begin{pmatrix} Longitudinal\ Position + (-Y\_pan * Scaled\ Pixel\ Spacing\ Y) \\ Lateral\ Position \\ Vertical\ Position + (-X\_pan * Scaled\ Pixel\ Spacing\ X) \end{pmatrix}$$

For a gantry position of 180° the final table position for treatment would be calculated as follows:

$$\begin{pmatrix} Final\ Longitudinal\ Position \\ Final\ Lateral\ Position \\ Final\ Vertical\ Position \end{pmatrix} = \begin{pmatrix} Longitudinal\ Position + (-Y\_pan * Scaled\ Pixel\ Spacing\ Y) \\ Lateral\ Position + (-X\_pan * Scaled\ Pixel\ Spacing\ X) \\ Vertical\ Position \end{pmatrix}$$

For a gantry position of 270° the final table position for treatment would be calculated as follows:

$$\begin{pmatrix} Final\ Longitudinal\ Position \\ Final\ Lateral\ Position \\ Final\ Vertical\ Position \end{pmatrix} = \begin{pmatrix} Longitudinal\ Position + (-Y\_pan * Scaled\ Pixel\ Spacing\ Y) \\ Lateral\ Position \\ Vertical\ Position + (X\_pan * Scaled\ Pixel\ Spacing\ X) \end{pmatrix}$$

Where "Scaled Pixel Spacing X" = "Scaled Pixel Spacing Y" for images which have been zoomed by the same factor in both directions.

For R1 the transformation is only implemented for orthogonal angles.

### A.9.4        COHERENCE Adaptive Targeting Storage SCP

The COHERENCE Adaptive Targeting Application RT IOD specific implementation details are provided with respect to its role as service class provider (SCP) in the notes. In the usage notes, the following terminology is used:

- *Required* **–** indicates that the attribute is required in order for the application to use the object

- *Supported* – indicates that, if the attribute is present, it will be used by the application.

- *Not supported* – indicates that the attribute is ignored if present

### A.10        DICOM Print SCU – detailed status displays

The following tables document the behavior of the COHERENCE DICOM Print AE in response to messages received for the printer SOP class and the print job SOP class.

Definitions of camera symbols:

- Idle: Camera is installed and ready; idle icon is displayed.

- Interact:        The        user        has        to        react        in        near        future,        but        not        immediately.
Example: A camera was low in 8x10 clear sheets: LOW 8x10 CLR was sent by n-event-report.

- Queue Stopped: The user has to react immediately. Either the camera needs immediate interaction or a                        job                        has                        been                        aborted.
Example: A camera is out of 8x10 clear sheets, or camera is down, or a film job is aborted.

**Note:**    Different camera symbols are displayed according to the Printer Status Info.
The Printer Status (Success, Warning, Failure) is not evaluated, since the Printer Status Info is much more detailed and allows a more appropriate reaction of the system.

### A.10.1    Common Status Information

| Printer Status Info/ Execution Status Info | Description | Message string visible in 'Status Bar' | Other action for UI/ 'camera symbol' |
|---|---|---|---|
| NORMAL | Camera is ready | Camera is ready | <None>/idle |
| BAD RECEIVE MGZ | There is a problem with the film receive magazine. Films from the printer cannot be transported into the magazine. | Problem with receive magazine. | <None>/interact |
| BAD SUPPLY MGZ | There is a problem with the film supply magazine. Films from this magazine | Problem with supply magazine. | <None>/interact |

| CALIBRATING | Printer is performing self calibration, it is expected to be available for normal operation shortly. | Self calibration. Please wait. | <None>/idle |
| CALIBRATION ERR | An error in the printer calibration has been detected, quality of processed films may not be optimal. | Problem in calibration. Film quality may not be optimal. | <None>/interact |
| CHECK CHEMISTRY | A problem with the processor chemicals has been detected, quality of processed films may not be optimal. | Problem with chemistry. Film quality may not be optimal. | <None>/interact |
| CHECK SORTER | There is an error in the film sorter | Error in film sorter. | <None>/interact |
| CHEMICALS EMPTY | There are no processing chemicals in the processor, films will not be printed and processed until the processor is back to normal. | Camera chemistry empty. Please check. | <None>/interact |
| CHEMICALS LOW | The chemical level in the processor is low, if not corrected, it will probably shut down soon. | Camera chemistry low. Please check. | <None>/interact |
| COVER OPEN | One or more printer or processor covers, drawers, doors are open. | Camera cover, drawer or door open. | <None>/interact |
| ELEC CONFIG ERR | Printer configured improperly for this job. | Camera configured improperly for this job. Queue stopped. | **Queue for this camera will be STOPPED/ Queue stopped** |
| ELEC DOWN | Printer is not operating due to some unspecified electrical hardware problem. | Camera electrical hardware Problem. | <None>/interact |

## A.11    Coherence Physicist

In Release 1.0 (Coherence 2.0), the Coherence Physicist consists of two applications (task cards), the Data Conditioner (CDC) and Machine QA (MQA). As a Service Class Provider, the CDC loads DICOM RT plans and some DICOM image modalities (RT Images, SC Images, CR Images) as well as images from other sources which are not within the scope of this DICOM Conformance statement. MQA imports RT Plans created by the MQA application itself and RT Images. As a Service Class User, the CDC creates and edits RT Images. No other objects are edited by the CDC. MQA creates RT Plans and RT Structure Sets. No other objects are edited by MQA.
