Are you having a CT scan soon?

Your health is our focus. And a high-quality computed tomography (CT) scan plays an essential role in your care. Designed with your comfort in mind, our advanced CT scanner is engineered to quickly secure precise low-dose scans. An intuitively smarter interface means quick scan times. And advanced technology means precise scans. The result: fast, accurate outcomes your physician can rely on to provide you with exceptional care.

WHAT IS A CT SCAN?

A CT or CAT scan, also known as a computed tomography scan, is a medical imaging method that uses special X-ray equipment to obtain cross-sectional pictures of the body. The CT computer displays these pictures as detailed images of organs, bones, and other tissues. This type of imaging can be very helpful in diagnosing injuries or fractures or in identifying disease in its earliest stages.

WHAT HAPPENS DURING MY EXAM?

You'll be asked to change into a gown and then you will lie down on a patient table. The CT system is shaped like a large doughnut called the gantry and the center of it is called the bore or tunnel. The patient table will move slowly through the gantry's bore. Once the table and you are in the correct position, your CT technologist may ask you to hold your breath or not to move. You'll hear the CT system, which makes a low whirring sound.

WHAT IS A CT SCAN WITH CONTRAST?

For some CT examinations, a contrast medium (sometimes called a dye) is given to help highlight a particular area of your body. Depending on the type of exam, contrast medium is administered in a number of different ways. You might, for example, be asked to drink it or it might be injected into a vein. Keep in mind the contrast medium contains iodine, which can cause an allergic reaction in some people.

ARE THERE RISKS ASSOCIATED WITH A CT SCAN?

CT scans use X-rays, invisible beams of ionizing radiation that pass through the body and are altered by different tissues to create images. At our facility, we are dedicated to achieving the highest levels of patient safety. For this reason, we use CT imaging technology that enables high quality images using low radiation doses. Our investment in low dose CT technology is part of our ongoing commitment to your health and well-being.

Please consult your physician prior to the examination regarding existing allergies or any questions about contrast medium.
