What's
new with
VB61?

Where premium meets everyday mammography

No woman takes a mammography examination lightly: Uncertainty, stress, and health concerns often accompany her into the examination room.

By constantly updating and upgrading our products, we strive not only to provide you with state-of-the-art technology, but also to address the needs and fears of your patients: With the new Breast Health Moods¹, our colorful room design concept, combined with MoodLight¹ and OpComp[®], you can help your patients feel safe and calm. The pleasant atmosphere, warm colors, and soothing lights create a calming environment, which can help your patients unwind and be at ease during the examination.

With relaxed and calm patients, it is much easier to achieve high image quality and prevent rescans. And your patients will leave with a positive and reassured attitude toward their next appointment.

Tungsten tube with rhodium filter

Saves up to 50%² dose compared to Mo/Mo, and enables a high tube load capacity.

Convenient Single-Touch Positioning

Moves the system with a single press of a button and allows you to work seamlessly.

Efficient one-click-to-image

Starts the exam with a single click and the system is ready for the first exposure.

¹ Option.

Greater comfort, relaxed patients

Mammography experience
in a calming atmosphere

Do it in a click

Enhance your everyday
screening and diagnostics

Enjoy peace of mind

Increase your diagnostic
confidence at the right
dose

Get your money's worth

Benefit from low operation
costs and dedicated service
packages

We are pleased to announce the new Edition with VB61 for MAMMOMAT Fusion. With this Edition you get fit for the future.

Our MAMMOMAT Fusion is designed for high efficiency in everyday screening and diagnostics. With technology that optimizes workflow and imaging results, the system is a true workhorse in the world of mammography screening.

The new Edition includes several improvements to boost your performance and brings you to the latest standard in IT architecture and connectivity.

With this document we provide you with an overview of the benefits you can expect from MAMMOMAT Fusion. We are continually striving to develop the quality of our products and sincerely believe that this new system version will further improve your daily work with your mammography system.

Experience new possibilities with the new Edition of MAMMOMAT Fusion.

Better patient experience with Breast Health Moods¹

Patient experience together with technological advancements is our main focus. We develop breast care solutions that give patients optimal care.

To produce the best imaging results, it is key that the patient feels at ease during the examination. Providing women with a calming atmosphere during mammography screening can help women relax, ensuring a smooth examination.

With the new Breast Health Moods, our colorful room design concept, we created an additional patient-centric aspect to accompany our proven MoodLight¹ and OpComp®. These three components are meant to make the experience of a breast examination as comfortable and stressless for your patient as possible.

Improved performance with Windows 10

To boost its performance, the system is upgraded to the most recent version of Windows 10 for high efficiency.

Enhanced cybersecurity with Device Guard

Whitelist virus protection with Device Guard allows only the dedicated applications required by the mammography system to run and will block any other suspicious software. Furthermore, regular updates are no longer required, which help to be more effective and efficient than with other conventional virus scanners.

Easy access to service support with TeamViewer

With the proprietary software application TeamViewer, you will now have easier access to service support with remote access possibilities.

Fast screening workflow with barcode scanner access¹

To drive efficiency in screening, faster screening workflows can be realized with a plug-and-play barcode scanner that allows a faster patient registration.²

Improved reliability with new CSI detector

The new version of the CSI detector enables you to screen in difficult situations, such as in trucks. The conditions for humidity range were changed from 30–70% to 10–90% non-condensing. Please note that a system upgrade does not include the new detector.

¹ Option.

² HIPAA mandatory.

MAMMOMAT Fusion with VB61 is not commercially available in all countries. Its future availability cannot be guaranteed. Please contact your local Siemens Healthineers organization for further details.

On account of certain regional limitations of sales rights and service availability, we cannot guarantee that all products/services/features included in this document are available through the Siemens Healthineers sales organization worldwide. Availability and packaging may vary by country and are subject to change without prior notice. The information in this document contains general descriptions of the technical options available and may not always apply in individual cases.

Siemens Healthineers reserves the right to modify the design and specifications contained herein without prior notice. Please contact your local Siemens Healthineers sales representative for the most current information. In the interest of complying with legal requirements concerning the environmental compatibility of our products (protection of natural resources and waste conservation), it may contain recycled components that adhere to the same quality assurance measures used for factory-new components.

International version.

Not for distribution or use in the U.S.

The statements by Siemens Healthineers' customers described herein are based on results that were achieved in the customer's unique setting. Since there is no "typical" hospital and many variables exist (e.g., hospital size, case mix, level of IT adoption) there can be no guarantee that other customers will achieve the same results.
