

DICOM Conformance Statement

# *AI-Rad Companion Brain MR VA5x*

# 1 Overview

**AI-Rad Companion Brain MR** is a cloud-based/on-premises(edge) application, which communicates indirectly with other DICOM nodes since it makes use of the network services provided by teamplay DICOM Hub.

## AI-Rad Companion Brain MR:

- Displays images to a user (browser-based viewer application).
- Stores result DICOM data via teamplay DICOM Hub to one or several target DICOM node configured in teamplay DICOM Hub.

**AI-Rad Companion Brain MR** conforms to the DICOM Standard [2] and supports a subset of the storage SOP classes supported by teamplay DICOM Hub, as described in Table 1 - Network Services.

Please refer to the DICOM Conformance Statements of teamplay DICOM Hub [1] for further information on the provided network services.

**NOTE:** This DICOM Conformance Statement is applicable for **AI-Rad Companion Brain MR** of version VA5x and later until superseded by a more recent document applicable to a more recent version.

<sup>1</sup> Network communication is performed by teamplay DICOM hub. Please refer to the DICOM Conformance Statements of teamplay DICOM Hub [1] for further information.

Note:

1. Colors superimposed algorithm results are encoded using MR Image Storage (1.2.840.10008.5.1.4.1.1.4 ) in the following result series
  - 1) <OriginalInputSeriesDescription>\_Morpho\_Deviation
  - 2) <OriginalInputSeriesDescription>\_Morpho\_Fused\_Deviation
  - 3) <OriginalInputSeriesDescription>\_Morpho\_Label
  - 4) <OriginalInputSeriesDescription>\_Morpho\_Fused\_Label
  - 5) <OriginalInputSeriesDescription>\_WMH\_Label
  - 6) <OriginalInputSeriesDescription>\_WMH\_Fused\_Label
  - 7) <OriginalInputSeriesDescription>\_WMH\_ProgressionMap
  - 8) <OriginalInputSeriesDescription>\_WMH\_Fused\_ProgressionMap
2. The objects violating the MR Image Storage IOD using the following attribute values are
  - 1) (0028,0002) Samples per pixel as 3
  - 2) (0028,0004) Photometric Interpretation as "RGB"
  - 3) (0028,0100) Bits Allocated as 8

3. In Enhanced SR IOD, Device UID (0018,1002) added as part of Contributing equipment sequence (0018,A001) is a violation of DICOM standard. This can be considered as standard extended SOP class UID. There is a request [Change request ID (DICOM CP2062) to add Device UID to the Contributing equipment sequence.

# 3 Introduction

## 3.1 Revision History

Version	Date	Change
R1.0	15/05/2023	First version for VA5x

## 3.2 Audience

This document is intended for hospital staff, health system integrators, software designers or implementers. It is assumed that the reader has a working understanding of DICOM.

## 3.3 Remarks

The scope of this DICOM Conformance Statement is to facilitate integration between **AI-Rad Companion Brain MR** and other DICOM products. The Conformance Statement should be read and understood in conjunction with the DICOM Standard [2]. DICOM by itself does not guarantee interoperability.

The Conformance Statement does, however, facilitate a first-level comparison for interoperability between different applications supporting compatible DICOM functionality.

This Conformance Statement is not supposed to replace validation with other DICOM equipment to ensure proper exchange of intended information. In fact, the user should be aware of the following important issues:

- The comparison of conformance statements is the first step towards assessing interconnectivity and interoperability between **AI-Rad Companion Brain MR** and other DICOM conformant equipment.
- Test procedures should be defined and executed to validate the required level of interoperability with specific compatible DICOM equipment, as established by the healthcare facility. Siemens Healthineers reserves the right to modify the design and specifications contained herein without prior notice. Please contact your local Siemens Healthineers representative for the most recent product information.

All SCS (Special Character Sets) listed above are supported for incoming Data.

Three categories of character sets have to be differentiated because of their different encoding formats:

- Conventional ISO character sets: ISO\_IR 6, ISO 2022 IR 6, ISO\_IR 100, etc. → Encoded in ISO 2022
- ISO\_IR 192 → Encoded in UTF-8
- GB18030 → Encoded in GB18030

It is not possible to recognize the following mismatches automatically on receiving or importing:

- An attribute value is encoded in ISO\_IR 192  $\leftarrow \rightarrow$  (0008,0005) contains a conventional ISO character set as primary character set
- An attribute value is encoded in GB18030  $\leftarrow \rightarrow$  (0008,0005) contains a conventional ISO character set as primary character set
- An attribute value is encoded in ISO 2022  $\leftarrow \rightarrow$  (0008,0005) contains ISO\_IR 192
- An attribute value is encoded in ISO 2022  $\leftarrow \rightarrow$  (0008,0005) contains GB18030

An IOD that contains one of the above mentioned inconsistencies does not conform to DICOM. As these kinds of inconsistencies cannot be recognized by the system, the IOD will not be rejected but the character data might be corrupted.

AI-Rad Companion Brain MR supports Kanji characters in the byte zone after 74 (79, 7A, 7B and 7C).

# **8 Attribute confidentiality profiles**

## **8.1 De-identification**

Please refer to the AI-Rad Companion Data Privacy and Security White Paper [3] for further information on the support of de-identification of attributes natively for AI-Rad Companion Cloud deployment. In case of edge (on-premises) deployment, no de-identification happens from teamplay.

AI-Rad Companion Brain MR does not support any specific security measures.

## **9.2 Association Level Security**

It is possible to configure whether the SCP will only answer to known AETs or to any AET.

## **9.3 Application Level Security**

NOT APPLICABLE
