

HAVE CONFIDENCE

Your doctor will receive high-quality images needed to provide the best patient care.

SAVE TIME

New innovations and technologies mean you're in and out of the exam faster.

FEEL COMFORTABLE

The large opening accommodates people of all sizes, while the latest applications help improve your exam experience.

Your MRI exam information:

Date: _____

Time: _____

YOUR MRI EXAM CHECKLIST:

- Remove all metal objects, such as a belt or jewelry.
- Bring images from previous examination (including X-rays) with you.
- Ask your physician if your examination requires contrast. If it does, find out how many hours you will need to fast before the examination.
- Let your physician know if you have had previous allergic reactions.

The best care requires the right images

THIS IS MRI AT

Exceptional images. Extraordinary patient care.

MRI scan in your future?

We understand that you want to get the best possible MRI scan for the best possible care. And you may have a lot of questions. This brochure includes the answers to some of our most frequently asked questions.

A high-quality, magnetic resonance imaging (MRI) scan will help your doctors get the right information to make the best diagnosis. That's why we've invested in an MRI system that adapts to your unique body for a more precise, fast, and comfortable exam. With exceptional image quality and a patient-friendly experience, this is the MRI trusted by doctors and preferred by patients.

WHAT IS AN MRI SCAN?

MRI stands for magnetic resonance imaging. Unlike x-ray or CT (computed tomography), MRI does not expose you to radiation. Instead, MRI uses magnetic fields and radio waves to identify different body tissue and differentiate individual anatomy. This type of imaging can be very helpful in diagnosing injuries or fractures, or in identifying disease in its earliest stages.

WHAT HAPPENS DURING MY EXAM?

On the day of your exam, you may be asked some questions to make sure that you're eligible to undergo the MRI exam. For instance, patients with metallic foreign bodies or surgically implanted devices like cardiac pacemakers and aneurism clips are not eligible. These devices may be adversely affected by the magnetic field. Objects containing ferrous metals will also interfere with obtaining a good MR image. Therefore, it's advisable to wear clothes without zippers, snaps, or buckles. Or, you may wear special garments provided by the imaging facility.

MRI exams generally take between twenty minutes and one hour. During this time, a series of images will be taken. Each set of images requires several minutes to complete. An intercom system keeps you in two-way communication with the trained medical professional performing your exam.

Try to remain still while images are being acquired. You'll know that an image is being acquired when you hear a knocking sound. Feel free to relax, when it's quiet. Once complete, your magnetic resonance images will be processed and sent to your physician who will discuss the results with you.

WHAT IS AN MRI SCAN WITH CONTRAST?

For some MRI examinations, a contrast medium (sometimes called a dye) is given to help highlight a particular area of your body. Depending on the type of exam, contrast medium is administered in a number of different ways. You might, for example, be asked to drink it or it might be injected into a vein.

Please consult your physician prior to the examination regarding existing allergies or any questions about contrast medium.
